Copyright and Disclaimer

This User Guide is intended for users, customers or Software Review Specialists to get to know the all-new DVD Fab 13 software and, is free from DVD Fab Software Inc. All rights reserved. Any attempt to use it for any commercial purpose is strictly prohibited. This publication shall not be, even partially, reproduced, redistributed, nor retransmitted in any form or by any means electronic, mechanical, photocopying, recording, or otherwise without the prior written permission of DVD Fab Software Inc.

1. Introduction

Welcome to DVD Fab Software Inc., the leading software vendor dedicated to providing the world top-notch DVD/Blu-ray/4K UHD Blu-ray copying, burning, ripping, cloning, authoring and video conversion solutions for over 16 years. As the 13th generation product succeeding DVD Fab 12, the all-new DVD Fab 13 features All-New Flat Design which is Plain and Simple.

- . Totally Redesigned User Interface. Everything at a Single Glance.
- . Float-in prompt windows make sure you shall never feel disturbed nor miss anything important.
- . Task Queue now is integrated into the main window. Checking real-time task status is much easier.
- . Utilities panel is relocated, sorted and made spacious. Every tool is right under your nose.

The disruptive innovations and incremental improvements combined instill one simple belief into users' minds – the all-new DVD Fab 13 is the best DVD Fab since the original DVD Fab back in 2003, and it will present users a much better user experience they could have never dreamed of.

2. Update DVD Fab

Depending on the different versions users may have installed, the ways to update to DVD Fab 13 also vary:

2.1 Live Update

Live update can be only realized from inside the program itself, which means only users already installed DVD Fab 13 can use this method to keep their installed versions up-to-date. To do that, follow the steps below:

1. Click the triangle button near the top right corner of Main Interface, and then from the drop-down menu click **Check for Update**;

2. Once a newer version is detected, click the  button to download the update package;

3. When the download finishes, the program will begin to install.

Downloading the Update Package

Update Package Downloaded

4.The installation shall be finished in just a few seconds. When it's done, click the desktop shortcut icon to start up the new version.

Note that, due to network reasons, the Live Update might occasionally fail to detect the new version. When this occurs, users can also use the traditional way to make the update.

2.2 Traditional Update

For users who are still with DVD Fab 12 or even the outdated DVD Fab 11 and DVD Fab 10, to upgrade to the latest DVD Fab 13, they have to go the traditional way. For that purpose, simply visit DVD Fab official website at <http://www.dvdfab.cn/download.htm> to download the installer of the newest DVD Fab 13, and then follow the setup wizards to perform the installation on your computer.

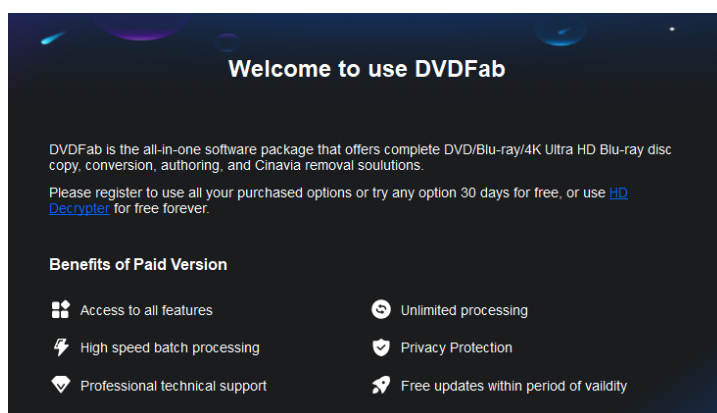

3. Startup DVD Fab 13

Before launching DVD Fab 13, make sure your internet connection works fine, because DVD Fab 13 shall depend on your internet network to access the server so that it can work normally. After the installation process finishes, click the DVD Fab 13 desktop shortcut icon. When the Startup Screen pops up, users can see on the screen that the software is accessing the server information. This might take a couple of seconds, depending on your internet speed. Just wait until it finishes.

Other Info on the Startup Screen: DVD Fab logo, trademark, software version, release date, vendor, and vendor's website.

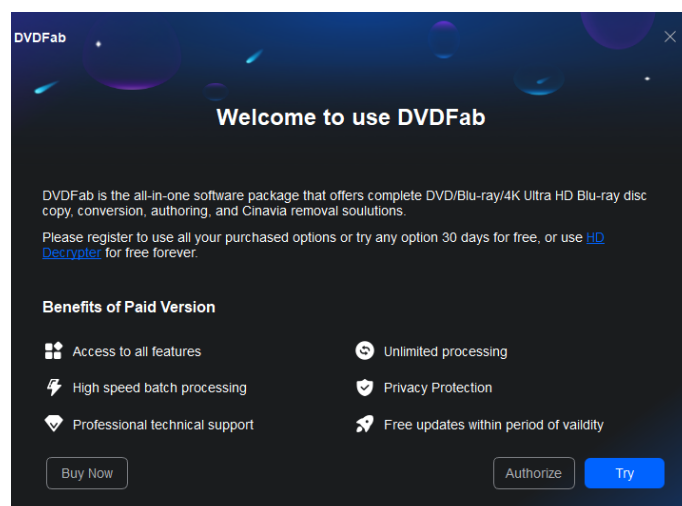

Note: If your computer is not internet connected, DVD Fab 13 cannot access the server information. In that case, you will see a popup window like below. When this happens, you can only use the free version HD Decrypter.

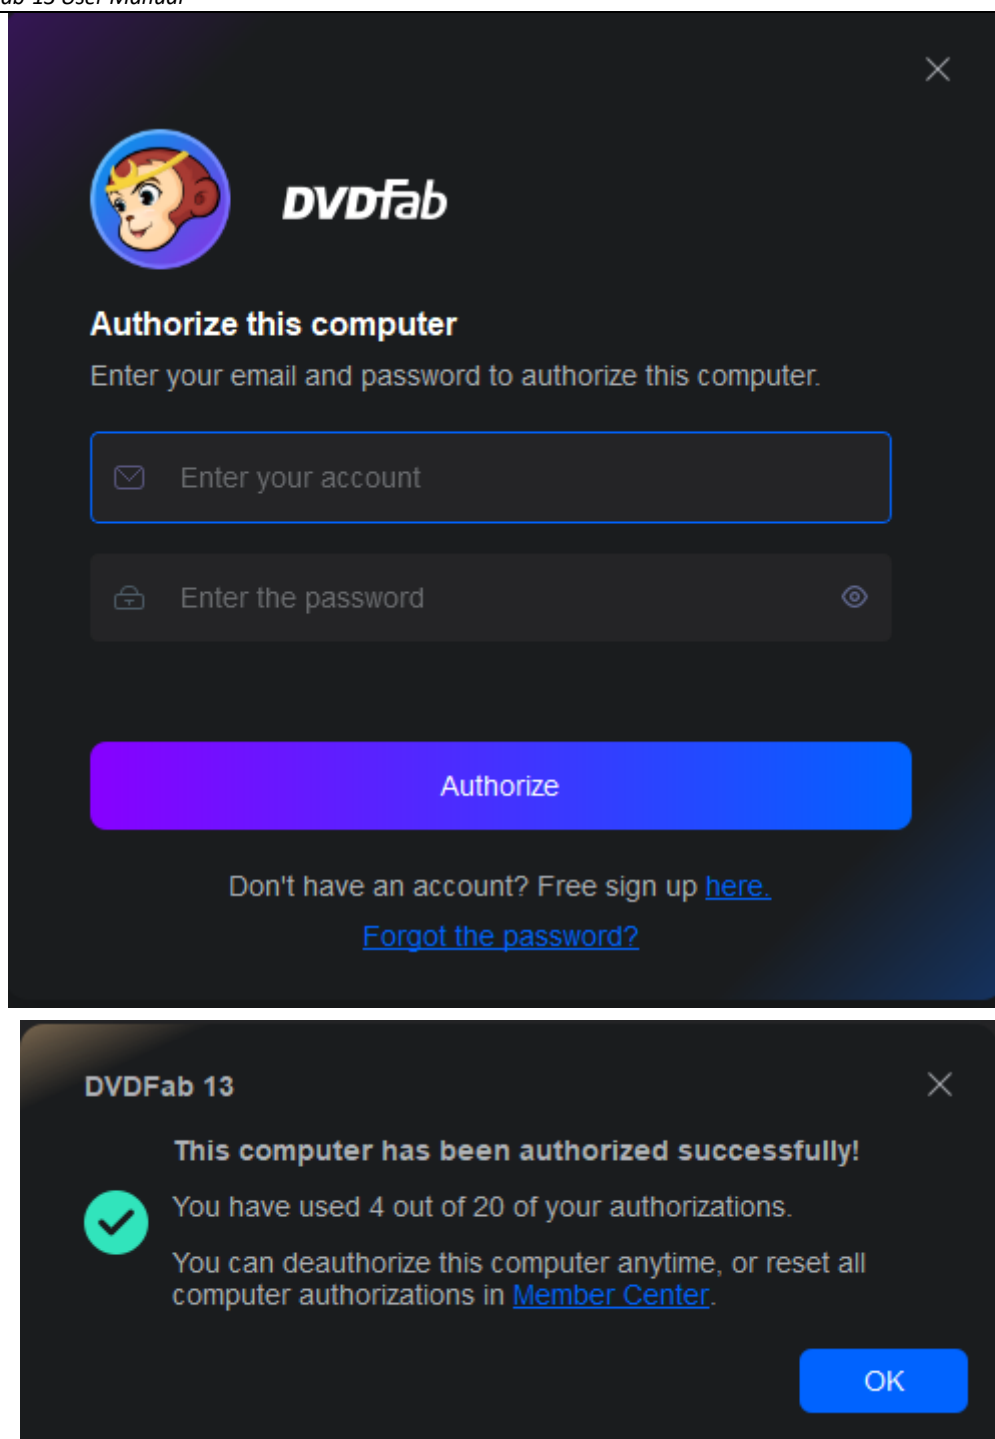

4. Authorize/Deauthorize DVD Fab 13

Similar to DVD Fab 12, DVD Fab 13 still uses the online verification method for authorization. To remind you: authorizing DVD Fab 13 requires a live internet connection, so check your Firewall or anti-virus software settings to make sure they do not block DVD Fab 13 from accessing the internet. Besides, before authorization, make sure you are already a member at DVD Fab Member Center; otherwise, go [Create an Account](#) first.

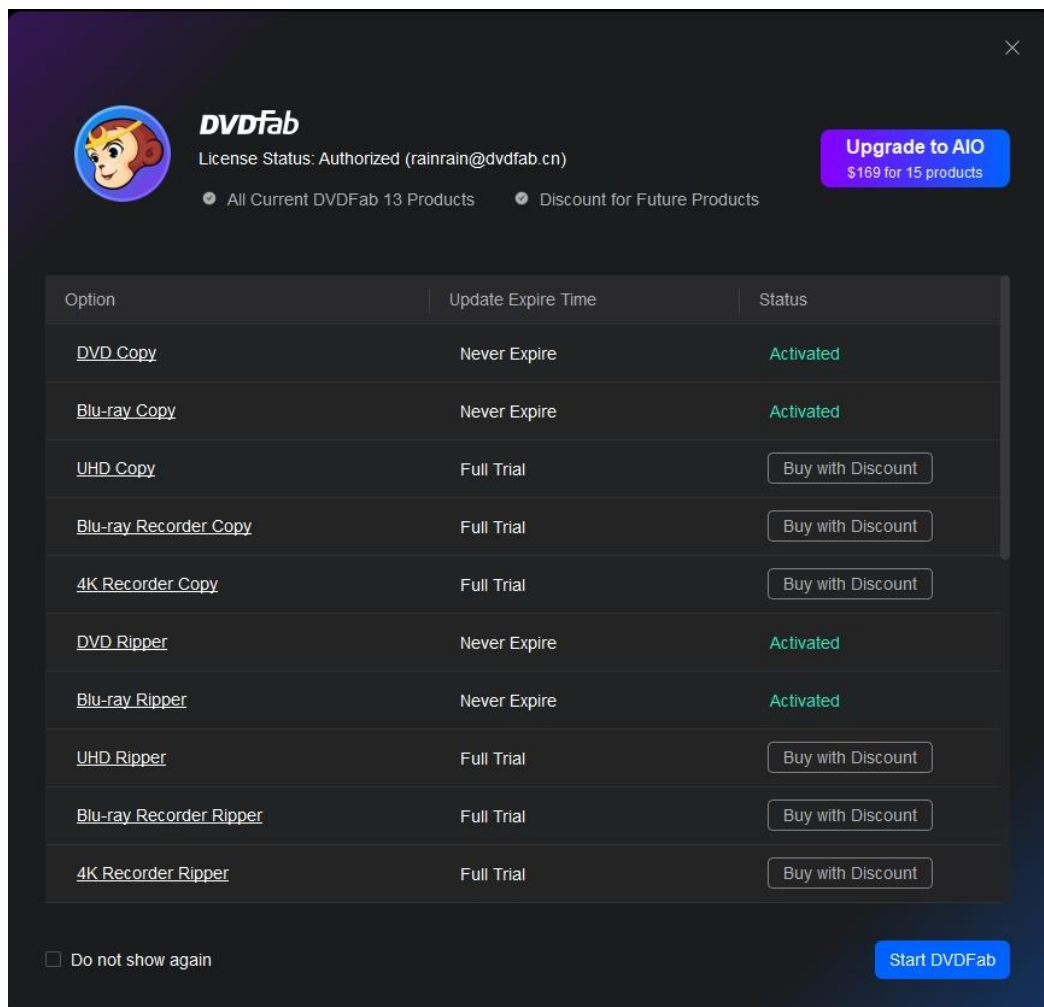

4.1.1 Upon DVD Fab 13 startup, click the "Authorize" button on the popup window which asks you to "Buy Now", "Authorize" and "Try"; if you've already skipped that window, don't worry. At the main interface, click the  icon near the top right corner, and then from the drop-down menu, click the "Authorize" tab to popup the **Authorization Window**;

4.1.2 Enter your registered e-mail and password at DVD Fab Member Center, and then click the "Authorize" button to proceed;

4.1.3 If the information you entered is correct, you shall see all the license information of the product(s) you've purchased, and then just click "Start DVDFab" to use the product(s);

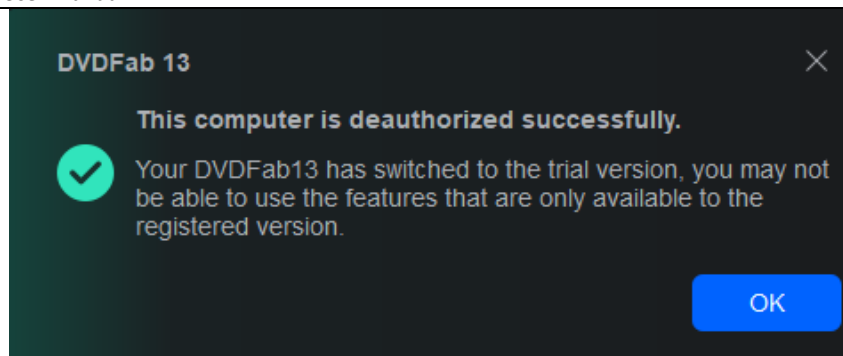

4.1.4 To deauthorize DVDFab 13 on your current PC, click the "Deauthorize" tab from the dropdown Help menu;

4.1.5 Enter your password and then click the "Deauthorize" button to proceed. As suggested, you can also deauthorize all your current PCs at the Member Center.

5. Main Interface

Compared with the previous generation, the main interface of the reinvented DVDFab 13 is very concise:

On the left the **Side Menu**, where users can switch among the 3 major modules (the **Copy** module, the **Ripper** module, the **Creator** module), Utility Tools UHD Drive Tool plus 4 freewares including **DRM Removal for Apple**, **BDInfo**, **BDFix** and **File Transfer**) and the **Task Queue Manager** which includes Processing, Finished and Archived.

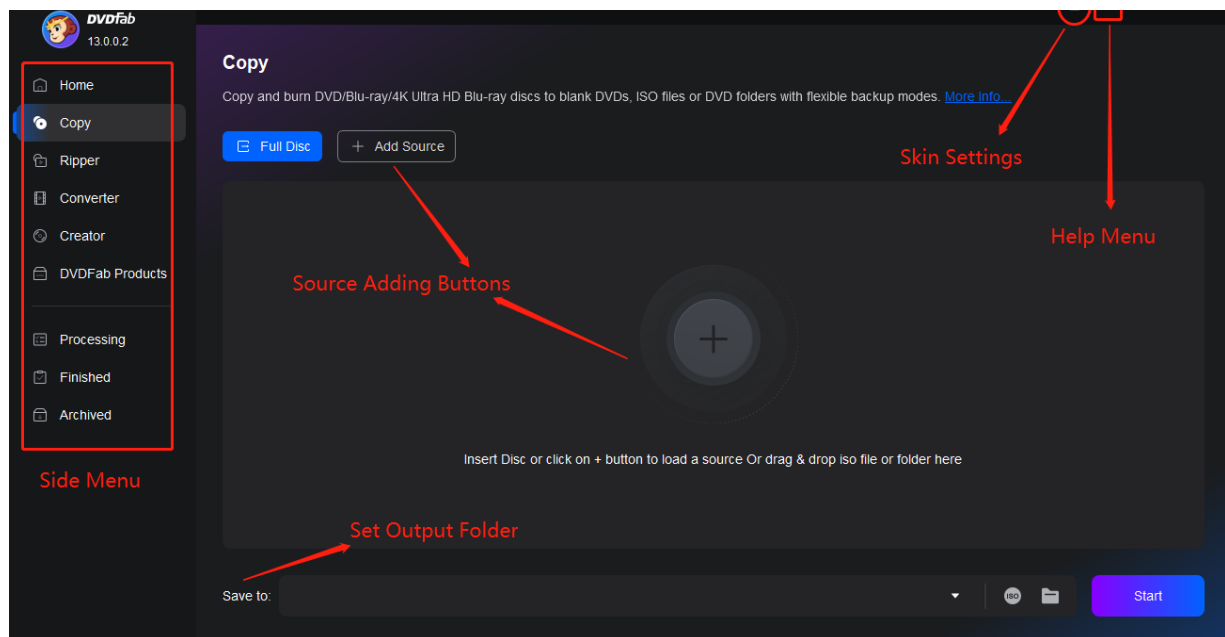

Note: Video Converter has been replaced to UniFab All-In-One now. Users who have DVDFab Video Converter can use UniFab Video Converter for free.

At the bottom left corner, you can see the **Save to** selection box, where you can choose your optical drive or a location from computer hard disk drive to save the final output files;

Sitting in the center of the Main Interface is the primary **Source Adding** button;

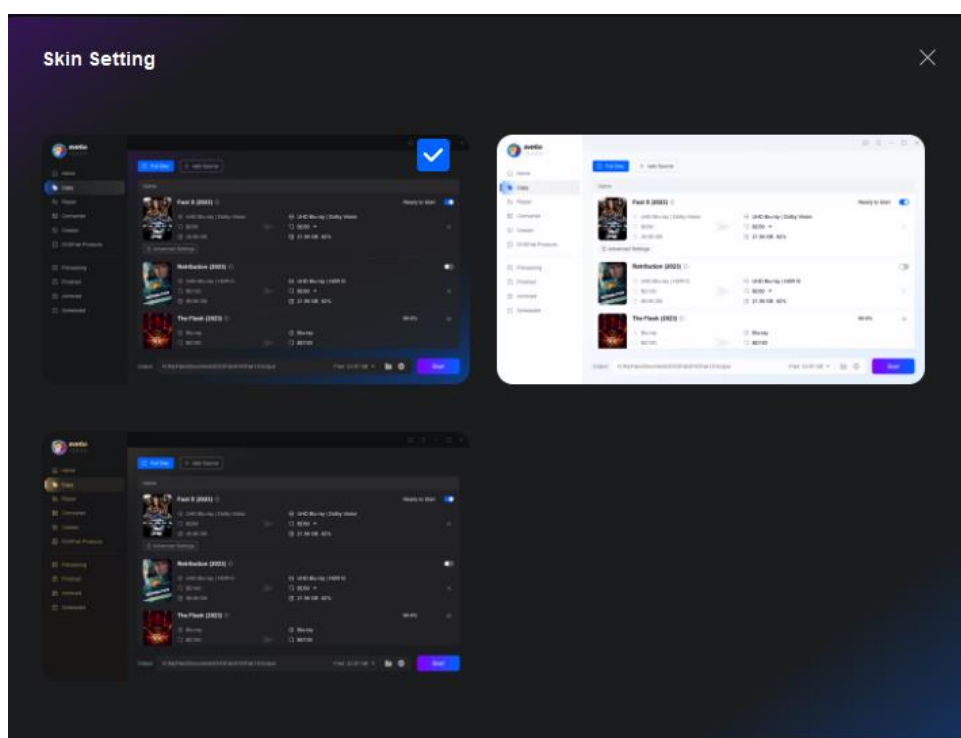

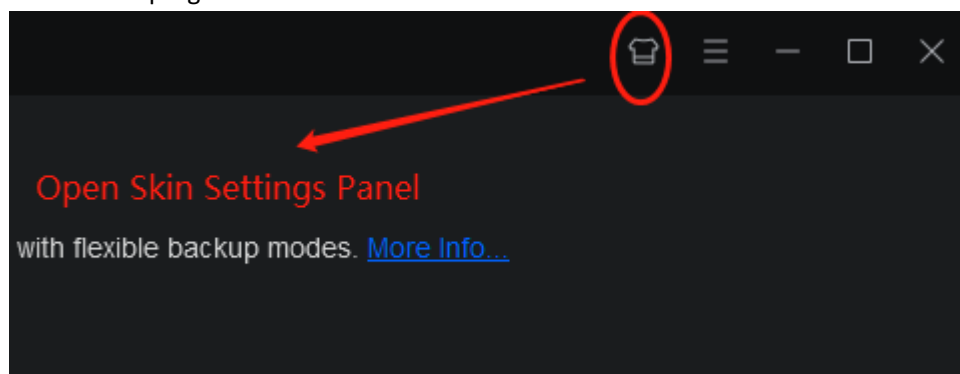

At the top right corner, users can see a triangle button which opens the **Help Menu**;

To the left of the triangle button is a T-Shirt icon which opens the **Skin Settings** panel.

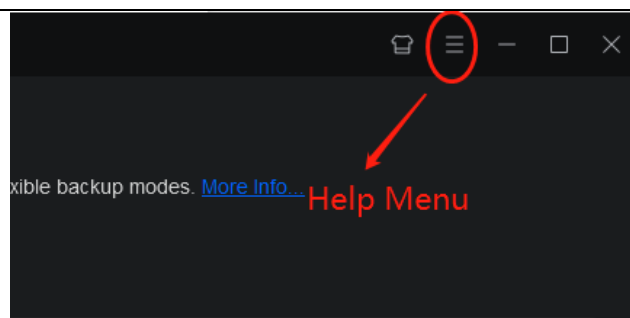

5.1 Skin Settings

At the Skin Settings panel, users can select from a dozen of predesigned skins to make their DVDFab 13 look special. Those skins are full of modern, fashionable and stylish elements. New skins will be constantly added through the course of upcoming new releases. The Skin Settings panel can pop up by clicking the T-shirt icon near the top right corner of the main interface.

Skin Settings Panel

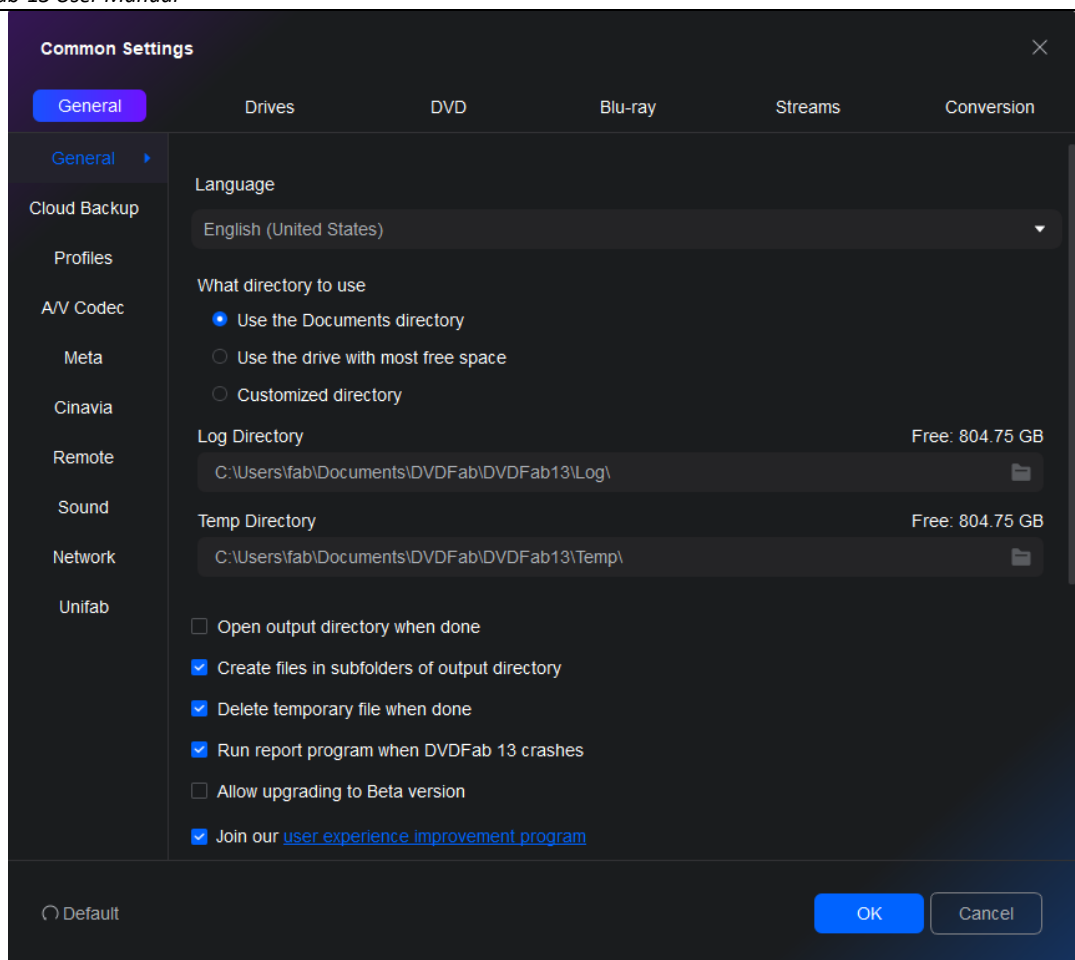

5.2 Help Menu

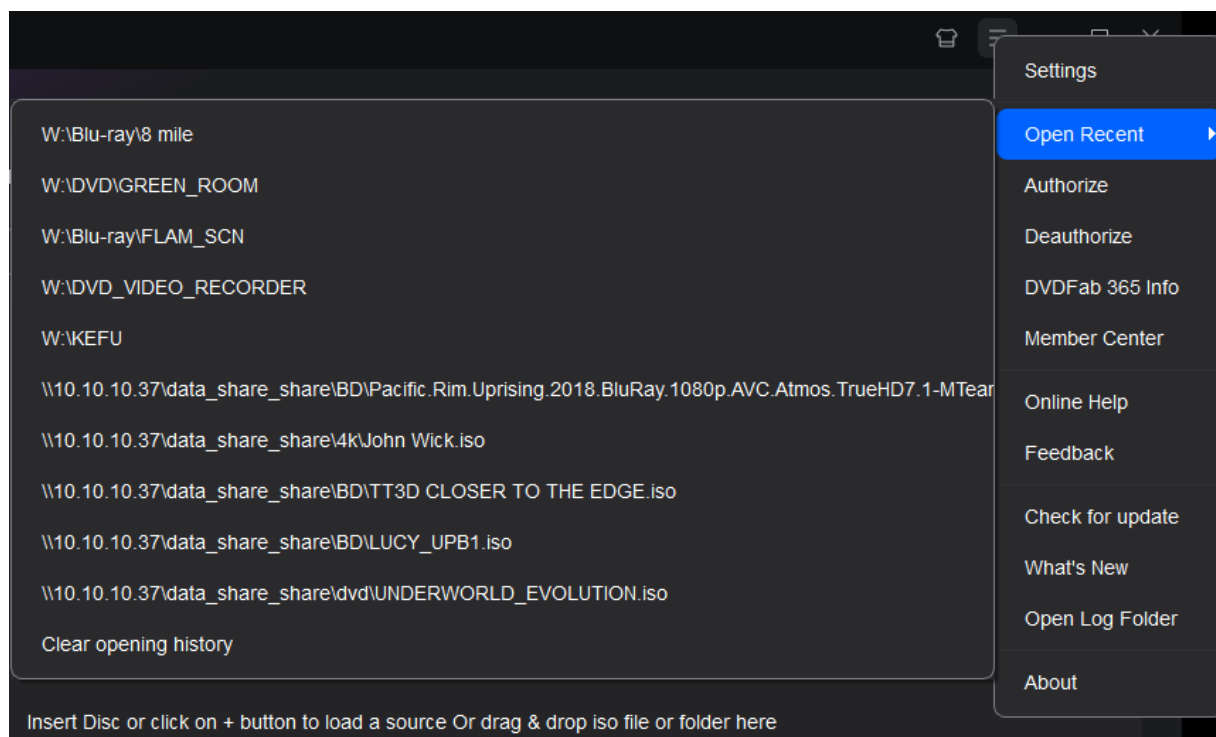

Clicking on the Triangle Button near the top right corner of the Main Interface, users can see a drop-down menu, which we officially call it the **Help Menu**.

5.2.1 Common Settings: this tab leads to the **Common Settings** panel, which we shall talk about in the following chapters.

5.2.2 Open Recent: this tab allows users to quickly add a source from their recently added list;

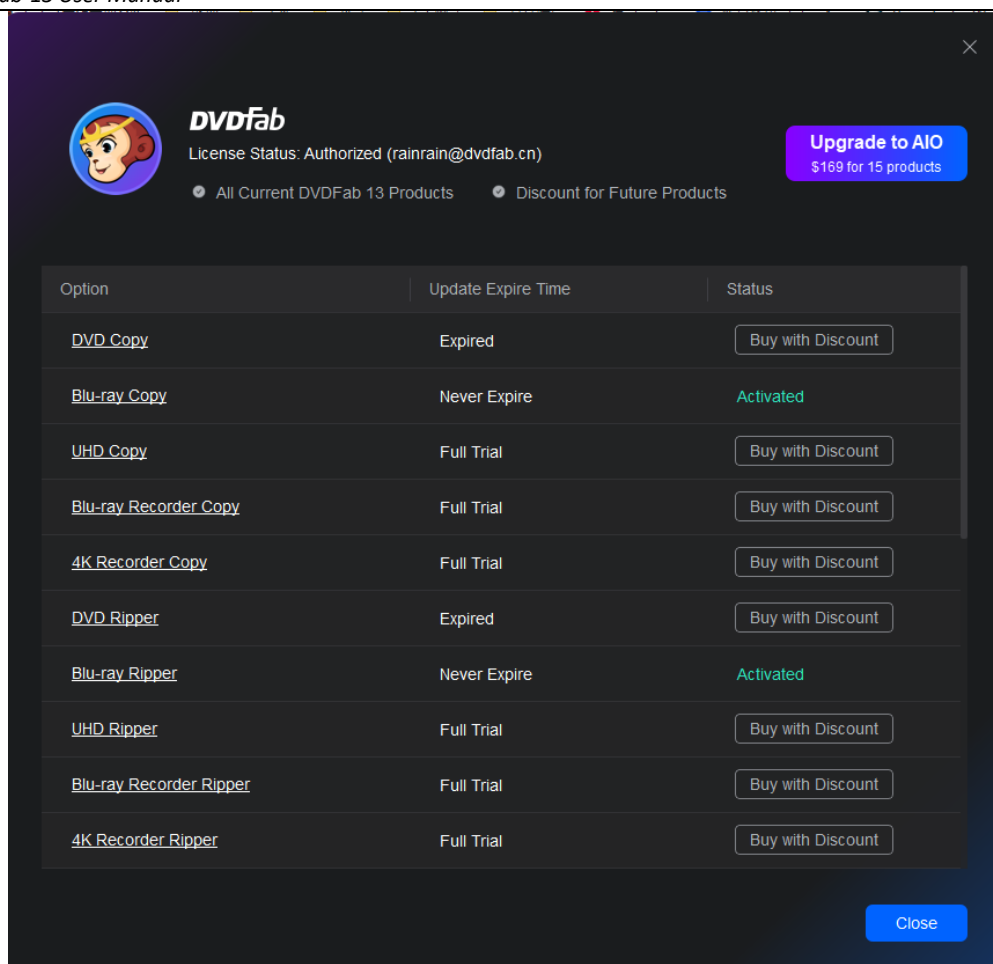

5.2.3 Authorize: this tab leads to the **Authorization Window**.

5.2.4 Deauthorize: this tab leads to the **Deauthorization Window**.

5.2.5 License Info: this tab opens the **License Info** window where users can check the current status of all their paid DVD Fab products.

5.2.6 Member Center: this tab take users to Member Center page to check the products they have.

5.2.7 Online Help: this tab takes users to the DVDFab online tips page.

5.2.8 Feedback: click this tab if are experiencing some difficulties with DVDFab 13. It is suggested that you describe your problems in great details, so that our developers can troubleshoot efficiently and get back to you in time. Note that your DVDFab logs will be attached if you use this form.

5.2.9 Check for Update: click this to see if there is a new update available. Note that this requires a live internet.

5.2.10 What's new: this tab take users to see the new products released.

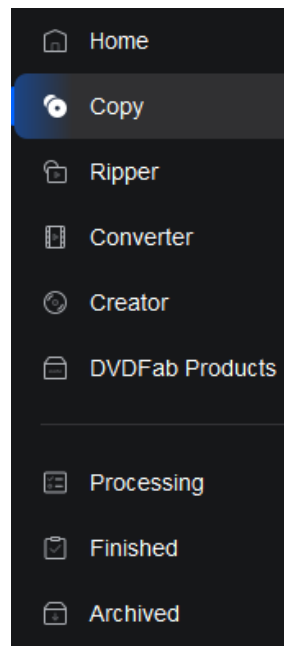

5.2.11 Open Log Folder: click this to open the log directory where all the log files are located.

5.2.12 About: this window shows software version, publisher, publisher's portal site, and etc.

5.3 Side Menu

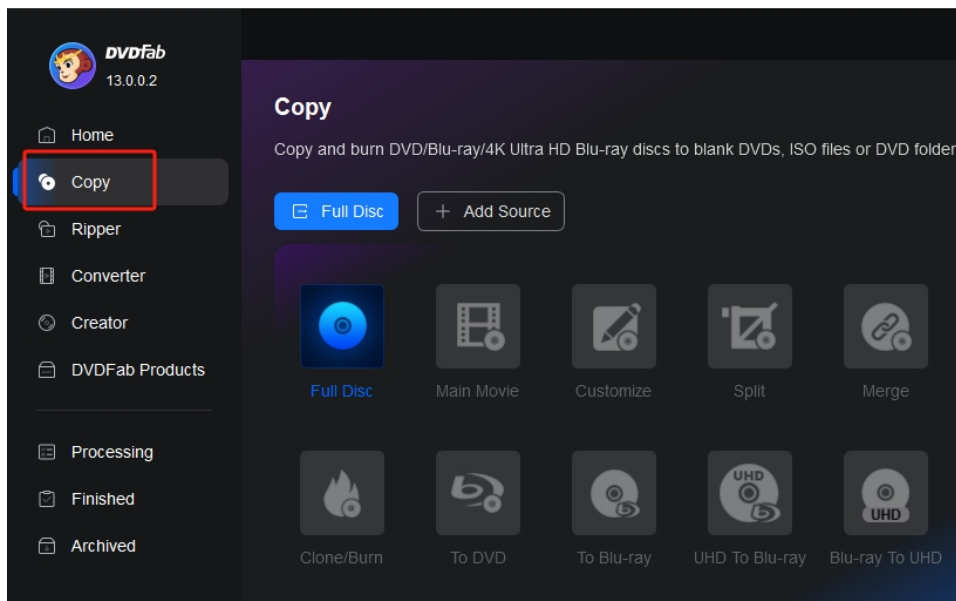

The Top Menu is for users to switch DVD Fab modules, utilities tools and task queue manager. In DVD Fab 13, with the capacity to run multiple modules at the same time, it is now much easier to switch to another module even if there are already one or more tasks running in the current module.

6. Three Main Modes

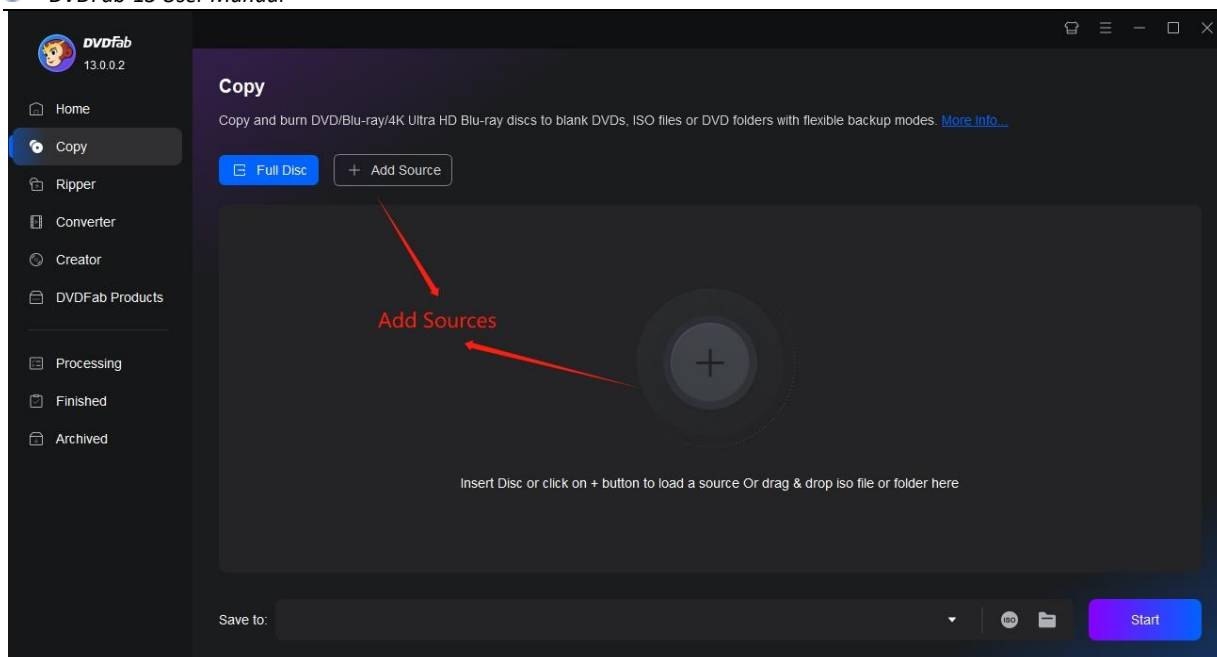

6.1 Copy mode

6.1.1 Introduction of Copy Mode

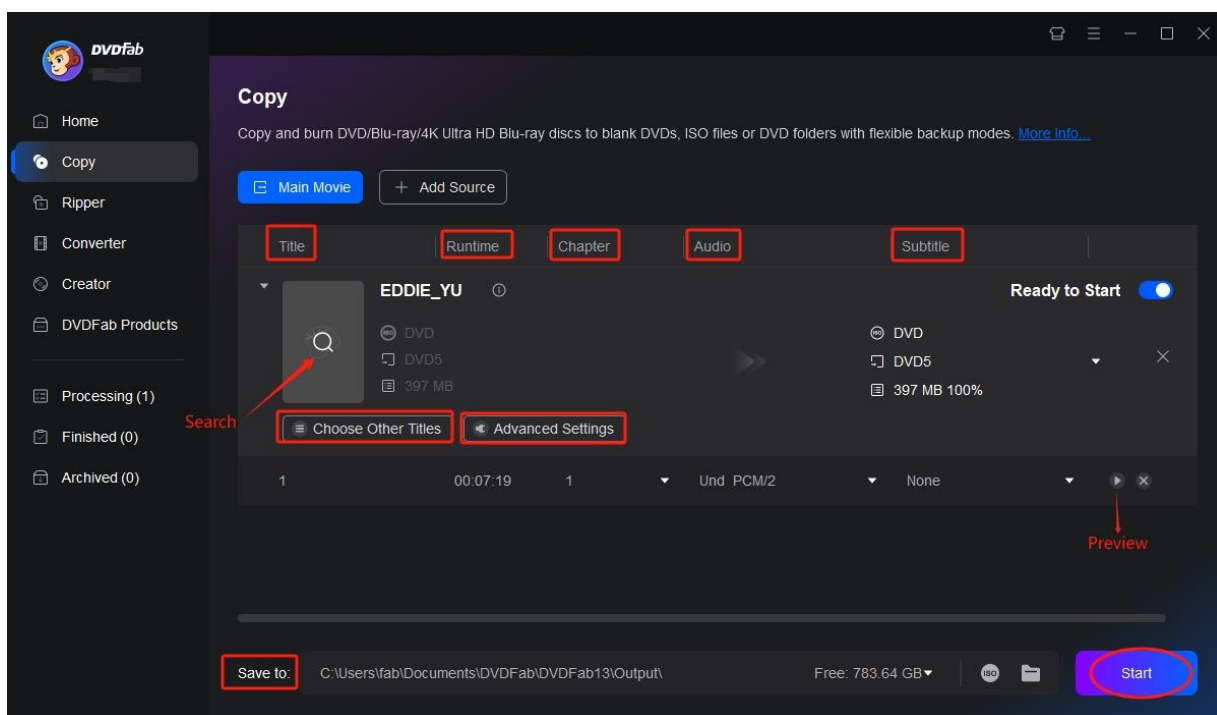

The name of this button varies, in Copy tool, it is called **Mode Switcher**, which leads to **Mode Panel**. You can select and set Full Disc, Main Movie, Customize, Split, Merge, Clone/Burn, to DVD, to Blu-ray, UHD to Blu-ray, Blu-ray to UHD at this place.

In this place, you can use the DVDFab products including DVD Copy, Blu-ray Copy and UHD Copy, DVD to Blu-ray Converter, Blu-ray to DVD Converter, Blu-ray to UHD Converter and UHD to Blu-ray Converter. You can input DVD, Blu-ray disc and 4k UHD at this place and then output to blank disc directly or save as ISO/Folder on HDD.

To use the product, firstly you need to **Add the Source**. There are two  buttons, one sitting at the top left corner of the main interface right under the DVDFab Logo, the other housed at the central of the **Operation Window**. Besides, if you don't want to use the **Add** buttons to load your sources, you can simply drag and drop them directly into the main interface for the same purpose.

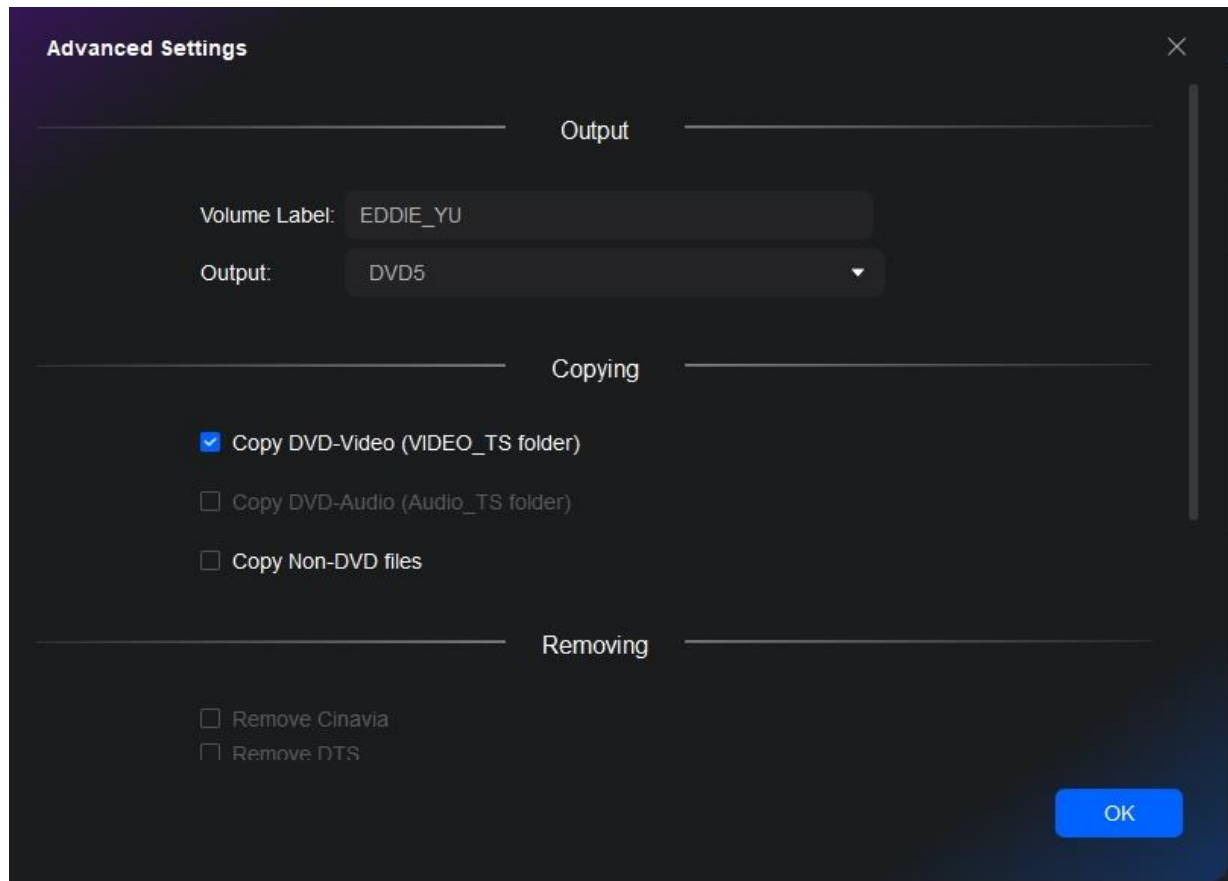

In Copy mode, after insert the source, you may see the **Title**, **Runtime**, **Chapter**, **Audio** and the **Subtitle** of the source, and you can set it per your need. You can **Choose Other Titles**,. At the bottom of the surface, you may see the **output path** and the **Start** button. You can **search Movie/TV** by click the magnifier icon. In **Advanced Settings**, appears when the source is loaded, and lies to the left of the **Preview** button.

For **Search** function. If the info it shows in DVD Fab 13 does not match the Meta Info of your Movie or TV show, you may click  and try to change the title or the year of the source to match them.

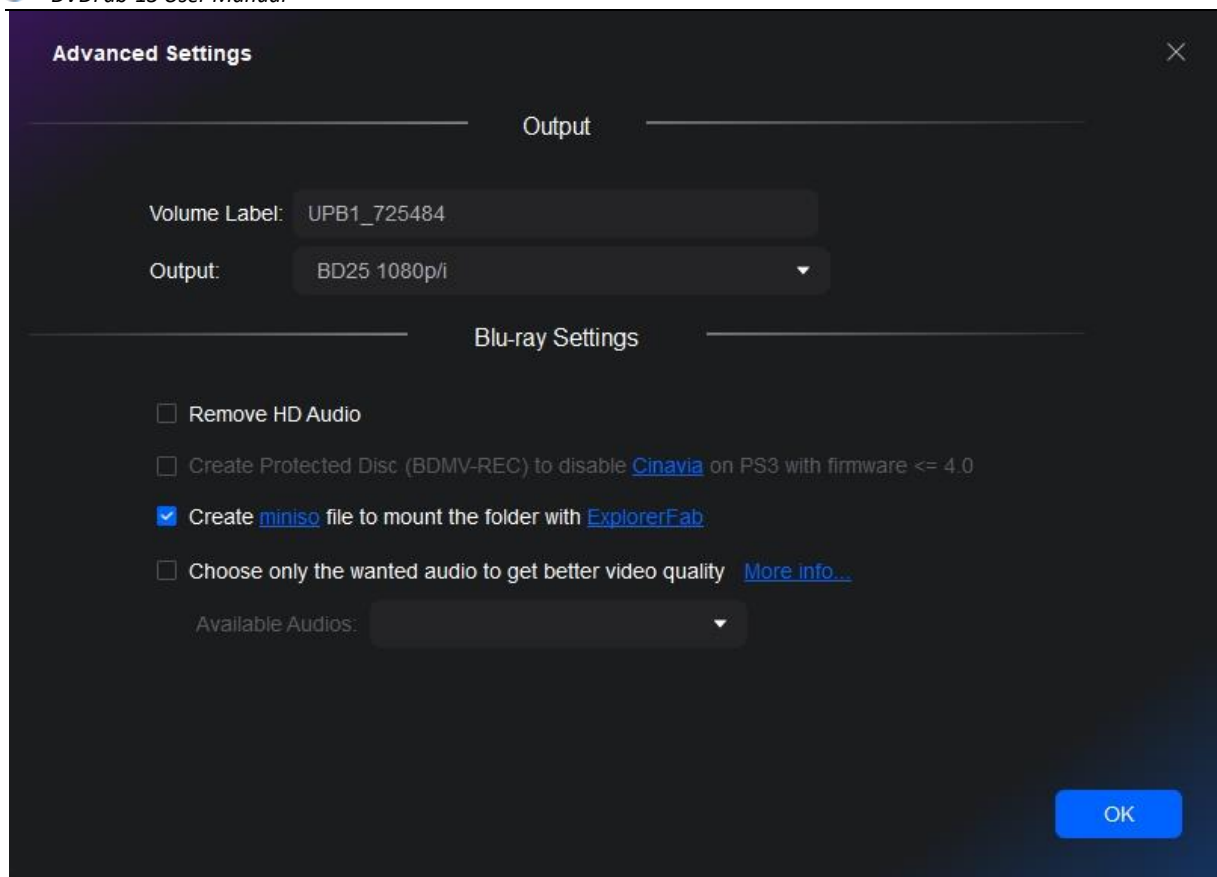

Meta Info or Metadata includes the title, runtime, audio/video formats, genre, director, actors and soon of a movie disc. With all such information preserved in the output NFO files, your media server, such as Plex, Kodi, Emby or DVD Fab Movie Server can better recognize, sort and organize the imported movies or TV Shows.

As for **Save to**,  refers to the destination of the resulting backup. The default target in Copy and Creator options is your optical drive . You can click  or  to output DVD/Blu-ray movie folder or ISO image file respectively to save on your computer HDD, or you can also save the output backup directly to DVD Fab Movie Server by clicking the little triangle button to select DVD Fab Movie Server from the dropdown menu; in Ripper option, the default destination is a directory located on your computer C:\ drive, you can click  to change a preferred location, click  to upload the converted videos directly to social networks including YouTube, Vimeo and Facebook, or save them directly to DVD Fab Movie Server or your mobile phones by the dropdown menu.

Advanced Settings in Copy tools, including DVD Copy and Blu-ray Copy, it has the following settings as shown below:

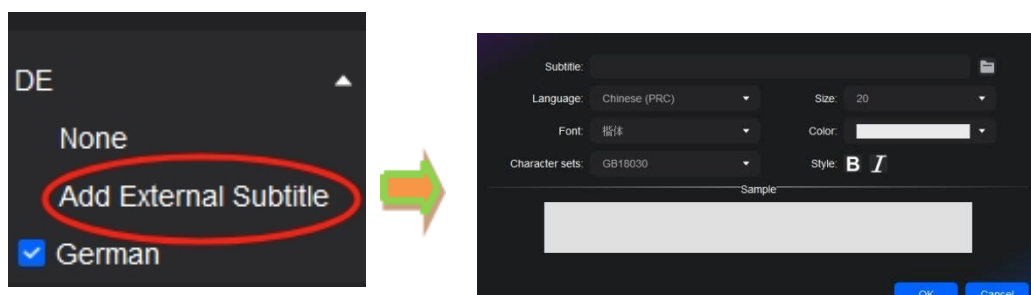

Advanced Settings panel when the source is DVD

Advanced Settings panel when the source is Blu-ray

If, during the copy, you want to add your own subtitle, just click the Subtitle section and then click the **Add External Subtitle** tab, which shall pop up the subtitle editing window, shown as below. Here, click the folder icon  to load the subtitle file from your PC hard drive, and then decide the relevant properties such as the Language, Size, Font, Color, Character Sets, and Style, etc. Users can preview the real effect as they determine each of the properties at the Sample section.

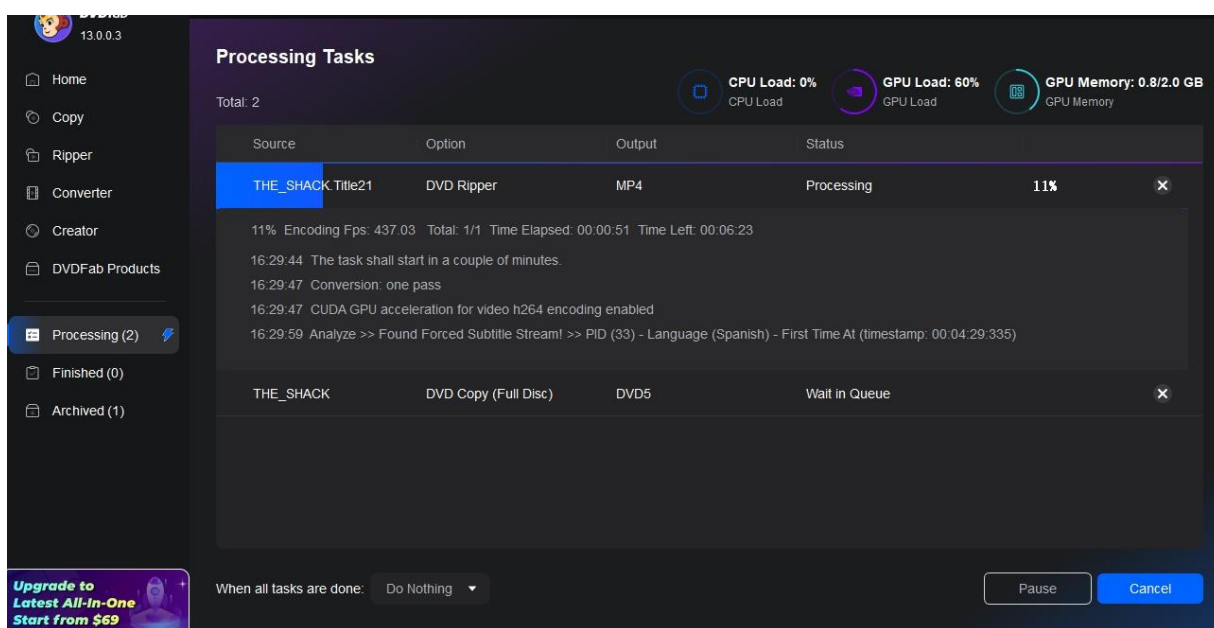

Task Queue Manager

Compared to ver 10, the Task Queue Manager in DVDFab 13 is no longer a separate window, but inlayed into the **Side Menu** bar. However, most of its functions remain the same as ver 10. From the Side Menu, users can open the all-new Task Manager, which shows all the **Processing Tasks**, **Finished Tasks** and **Archived Tasks** in one place, the detailed stats of each task, ready to start, processing, wait in queue, success, failed, cancelled, not processed, exit unexpectedly, etc., are all available at a quick glance.

Users can freely add new tasks into the Task Queue Manager, meaning, even there is currently one task in progress or more tasks, you can still load new sources in the same module or other modules and then add the new tasks; Users now can freely switch between the Task Queue Manager window and the main operation window;

A. Processing Task

The Processing Task list is the place where all the currently being processed and those still waiting to be processed tasks are displayed. If users want to add new tasks, they can simply click the tabs to choose any desired module to add the new task, without intervening the currently being processed tasks. Note that the newly added tasks shall be waiting in this list, at the bottom.

Users can select a certain task from the Processing Task list to delete it or to put it into the Archive Task list.

Explanations of some task stats:

Ready to Start: means that you have done the settings and editing related to that task, however you have not yet triggered the task; and you can still change relative settings and editing before hit the Start button from the main operation window; once hitting the Start window, that task status shall be immediately switched into Processing, and if you've started multiple tasks at one time, only the one at the top of the list shall be labeled as Processing, others will be tagged as Wait in Queue.

Processing: means that task has been started and currently in progress; at this point, changing settings and editing related to that task are no longer possible.

Wait in Queue: means that task is currently waiting for to be processed, which shall begin immediately after the previous task gets finished; at this point, changing settings and editing related to that task are no longer possible.

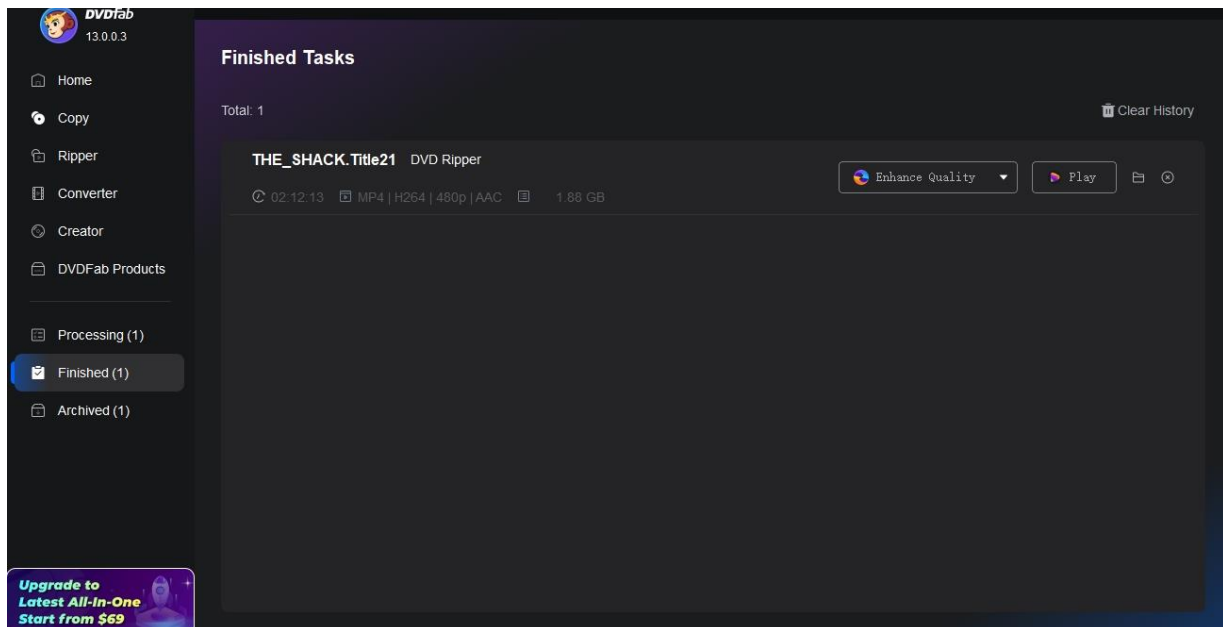

Success: means that task has already finished successfully.

Failed: means that task has failed.

Cancelled: means that task has been manually cancelled by user.

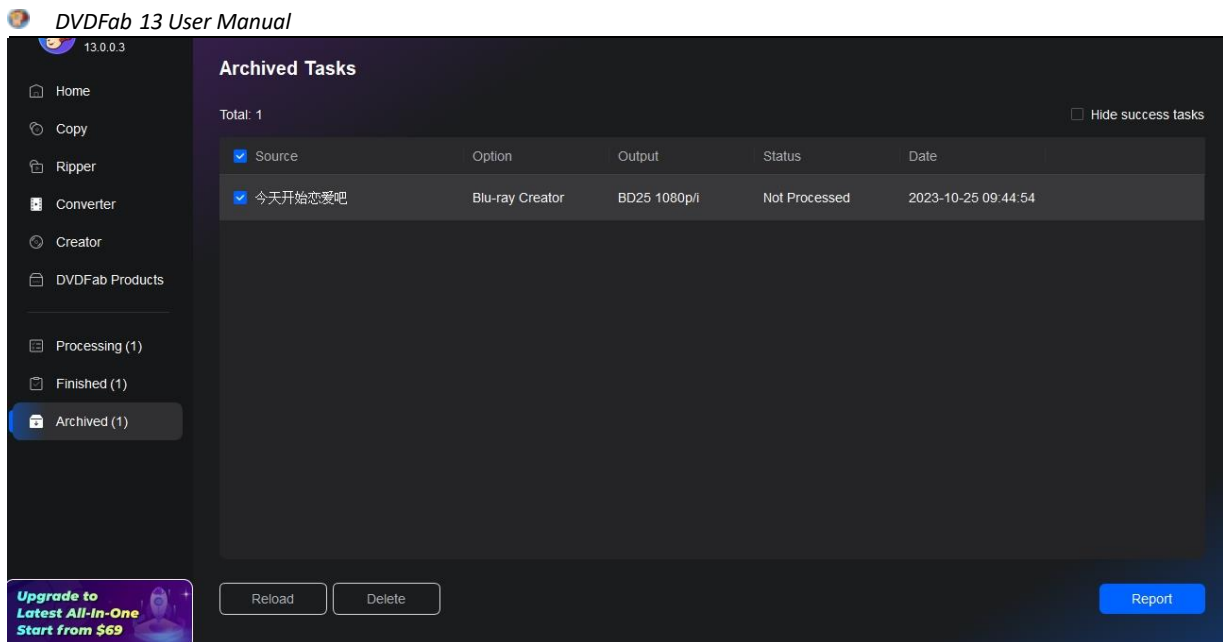

B. Finished Task

Finished Task is the place where all the successfully completed tasks are saved.

C. Archived Task

Archived Task is the place where failed, crashed and unexpectedly exited tasks are saved, including your detailed custom settings you set up last time. You can reload these tasks from here directly without doing from all scratch. Depending how each task was processed, users might be able to see Success, Failed, or Exited Unexpectedly under the status tab.

Explanations of some task stats:

Success: means that the task is finished successfully, only those success events that have been completed when a crash happens on the following tasks from the Current Task will be saved here.

Failed: means that the task was failed.

Exit Unexpectedly: means the program exited unexpectedly in the middle of that task, leaving the task unfinished; it will be saved by default in the Archived Task list, where users can redo it next time opening DVDFab.

Not Processed: means that task was not processed due to the program crashed or unexpected exit when processing the previous tasks, or users manually saved that task to the Archived Task.

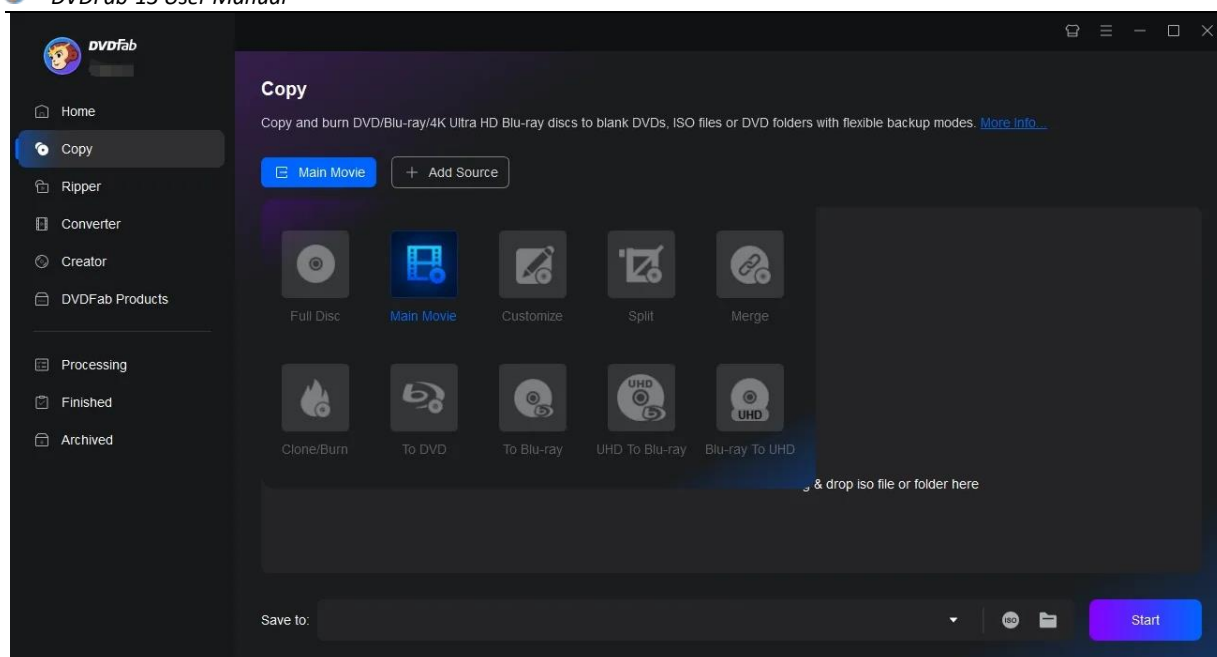

To the latter three circumstances, users can also select the task(s) and click the **Reload** button near the bottom left corner of the Task Queue window. Once users redo a certain task from the Archived Task list, that task will be moved to the Processing Task list.

6.1.2 How to use the products in Copy mode

6.1.2.1 How to use DVD Copy

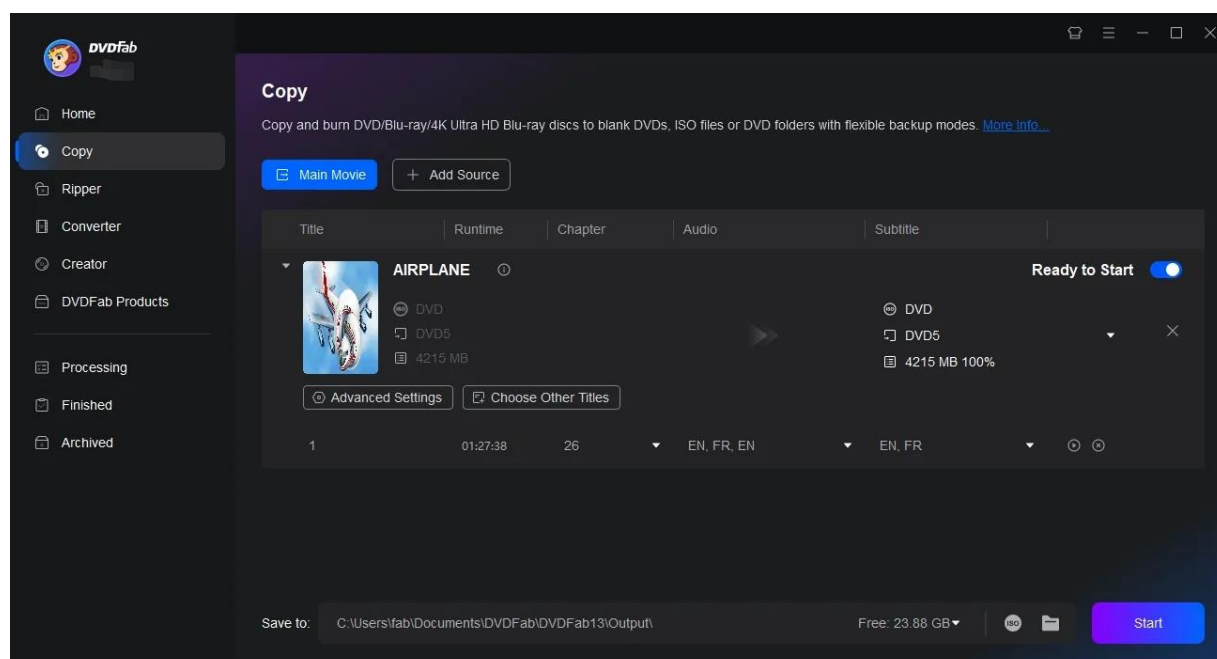

Step 1: Launch DVDFab and load the DVD source.

Open DVDFab 13 and choose the Copy option. Insert your DVD into the optical drive, or navigate to it through the Add button. If the source is an ISO or a folder, you can simply drag and drop the file onto the main page.

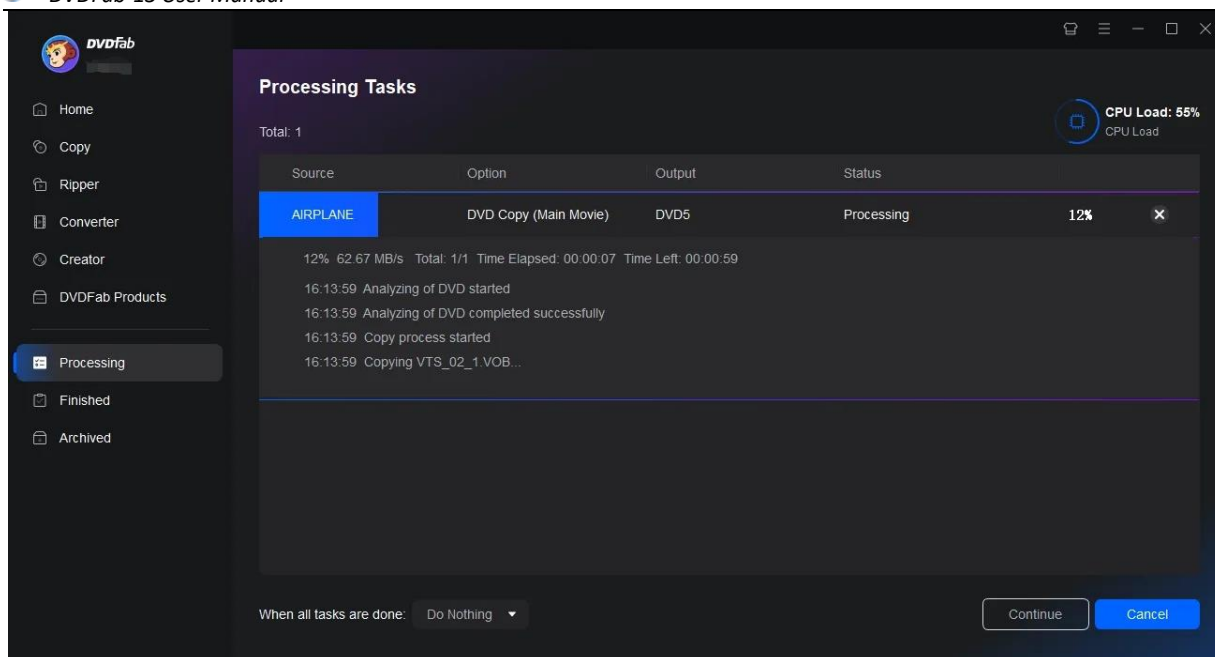

Step 2: Select a Copy mode and customize the output DVD.

Click the Copy mode as needed. Then choose the output DVD size (DVD-9/5). You can also define the volume label and change other copy options. Finally, select your output directory as a blank disc, ISO file, or folder.

Step 3: Start to copy DVDs free and fast.

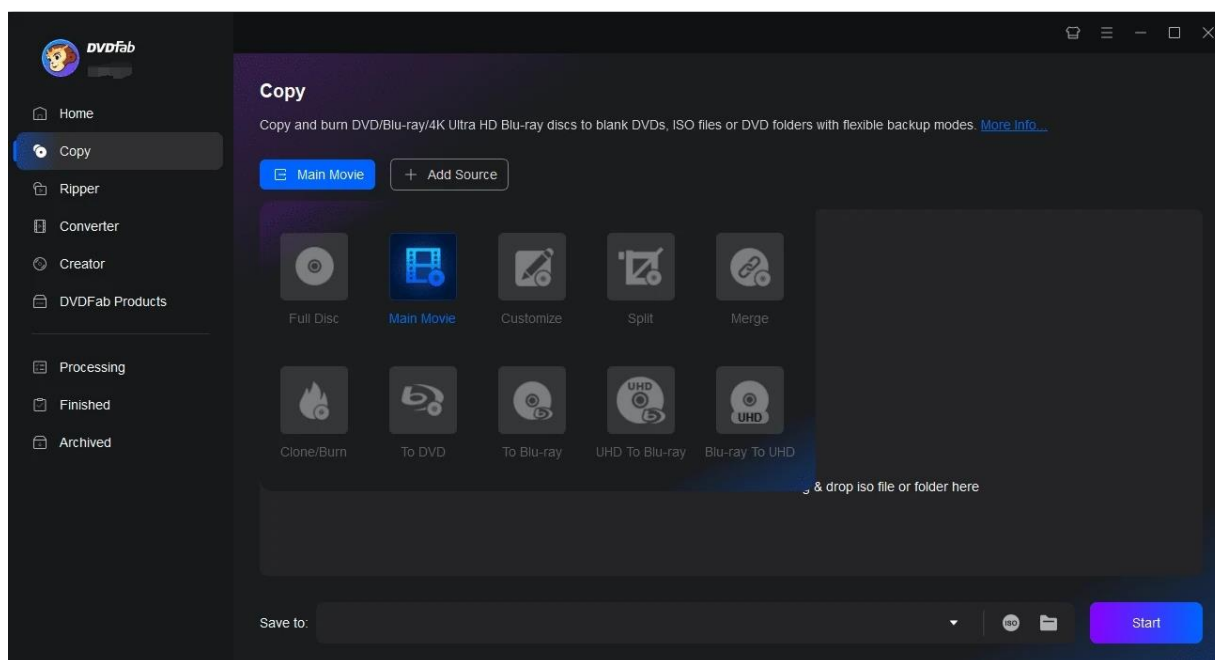

Tap the Start button to copy DVDs with lightning speed and top quality. You can cancel the process at any time, set your PC to automatically shut down, hibernate, exit the program, or do nothing at the end of the process.

6.1.2.2 How to use Blu-ray Copy

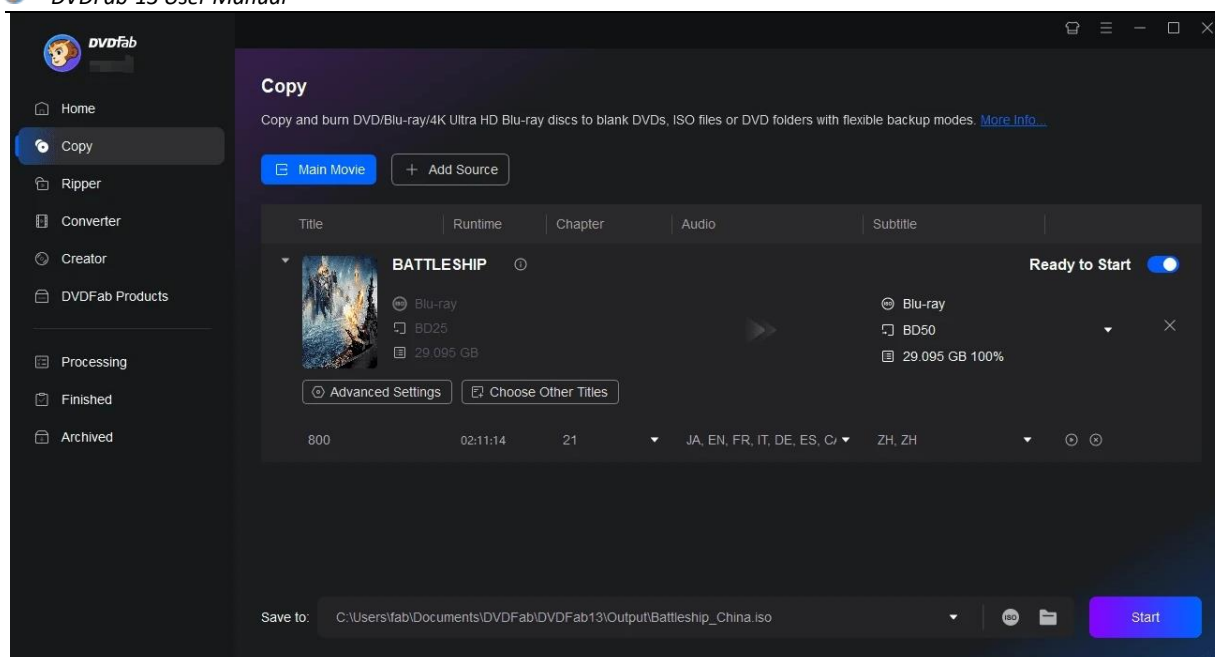

Step 1: Launch DVDFab and load the source Blu-ray.

Free download, run DVDFab 13, and opt for the Copy module when it runs. Insert the BD disc into the attached Blu-ray drive. You can also click the Add button or drag&drop an ISO file or folder onto the main UI.

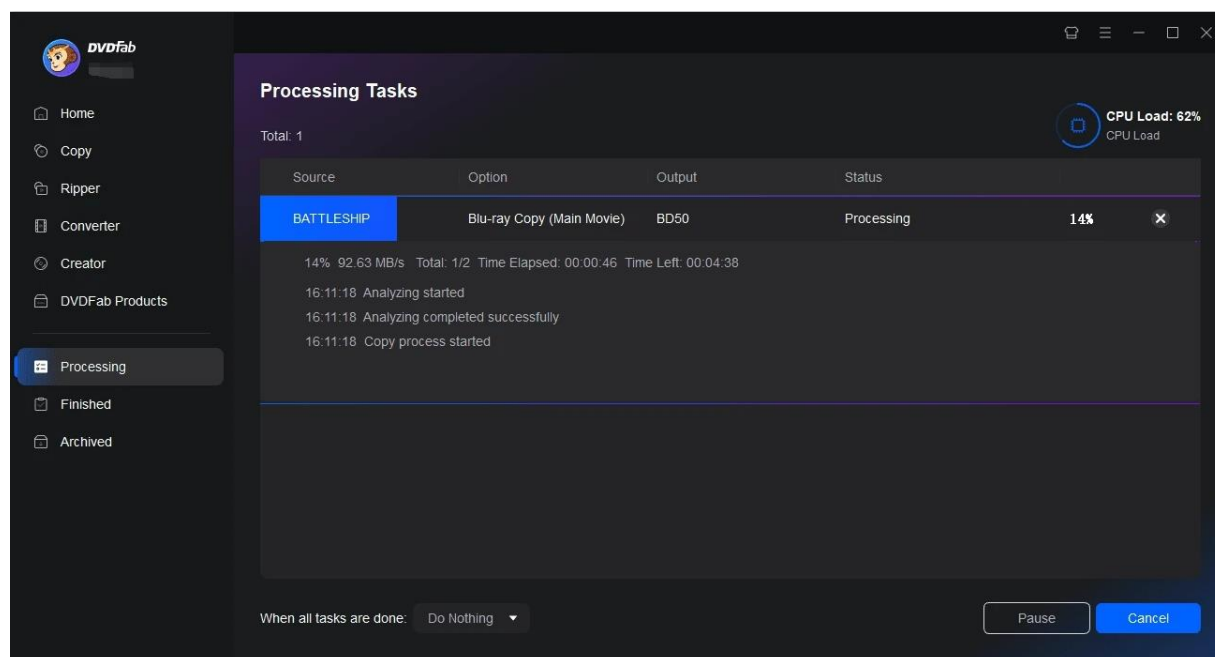

Step 2: Choose one copy mode and customize the output Blu-ray.

Move to the left pane, click the Copy Mode switcher, and choose your desired one. Then define the volume label and output size. BD-50, BD-25, BD-9, or BD-5 will be up to you.

Step 3: Start to copy Blu-rays.

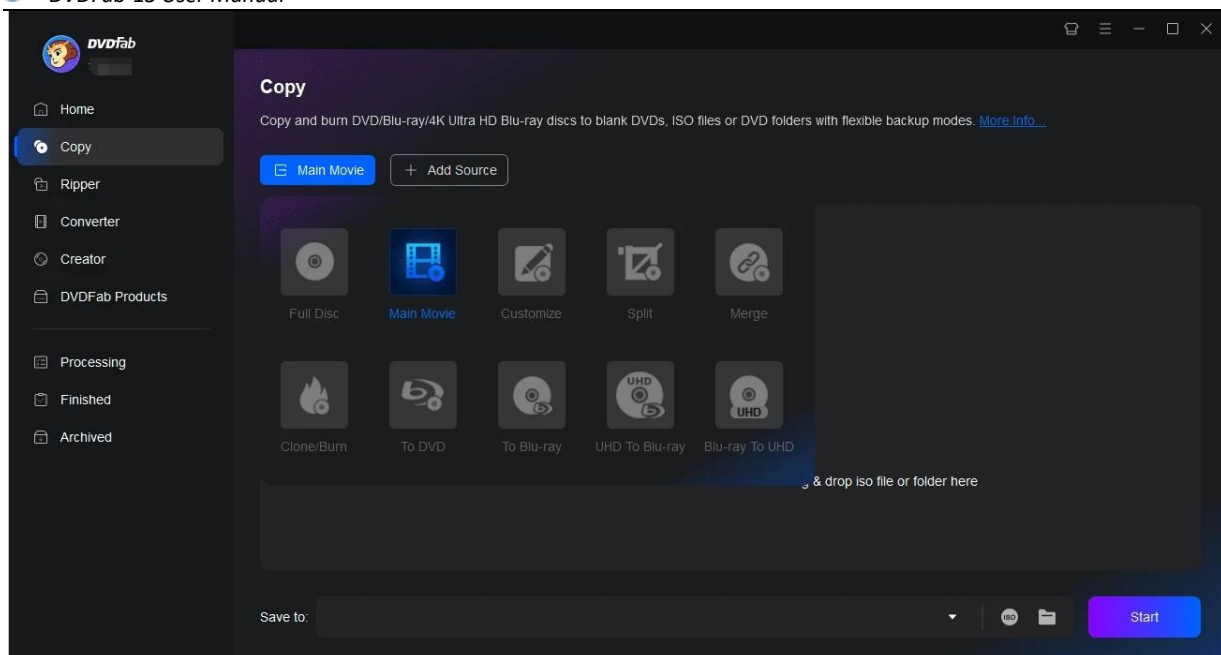

Select your output directory as a blank disc, ISO file, or folder, and click the Start button. You can get detailed progress information or cancel the Blu-ray copy task anytime you like.

6.1.2.3 How to use UHD Copy

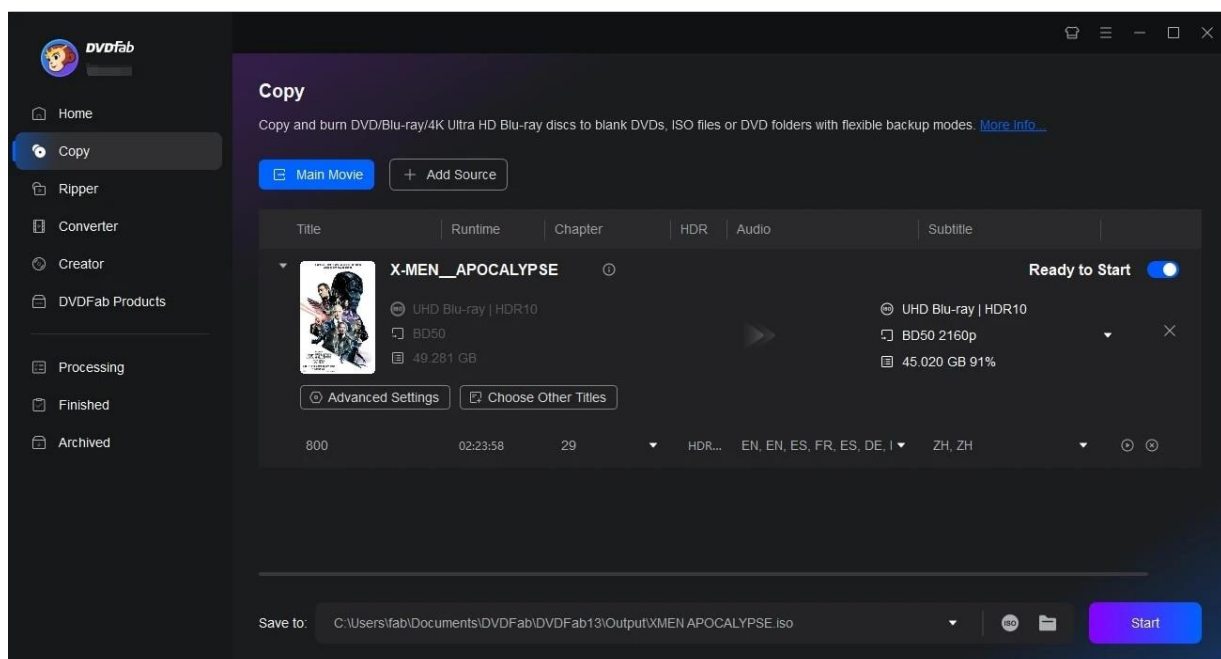

Step 1: Download and install the 64-bit version of DVDFab 13

Only the 64-bit version of DVDFab 13 contains the UHD Copy module, so make sure you download and install the correct version of DVDFab 13 onto your PC;

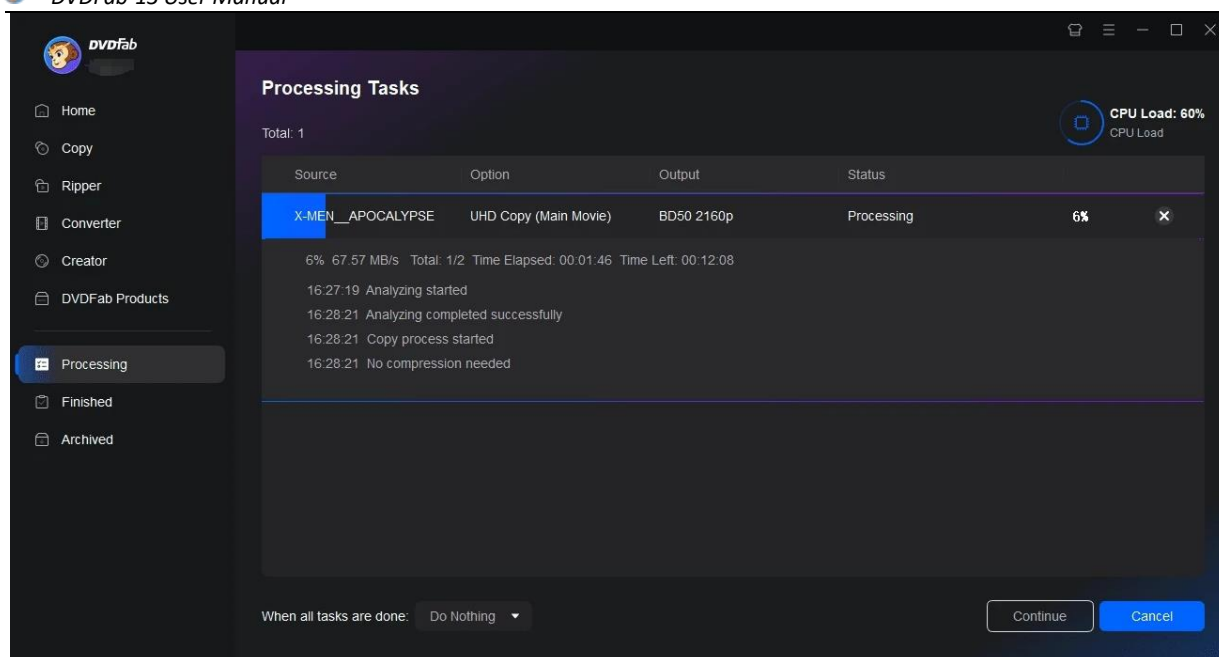

Step 2: Launch DVDFab 13 and go to the Main Movie/Full Disc/Clone mode of Copy module

Launch DVDFab 13, navigate to the Main Movie/Full Disc/Clone mode under the Copy module. As of now, only the Main Movie/Full Disc/Clone mode supports the 4K Ultra HD movies, but more backup modes shall be supported through the future update course;

Step 3: Load the source 4K Ultra HD source to copy

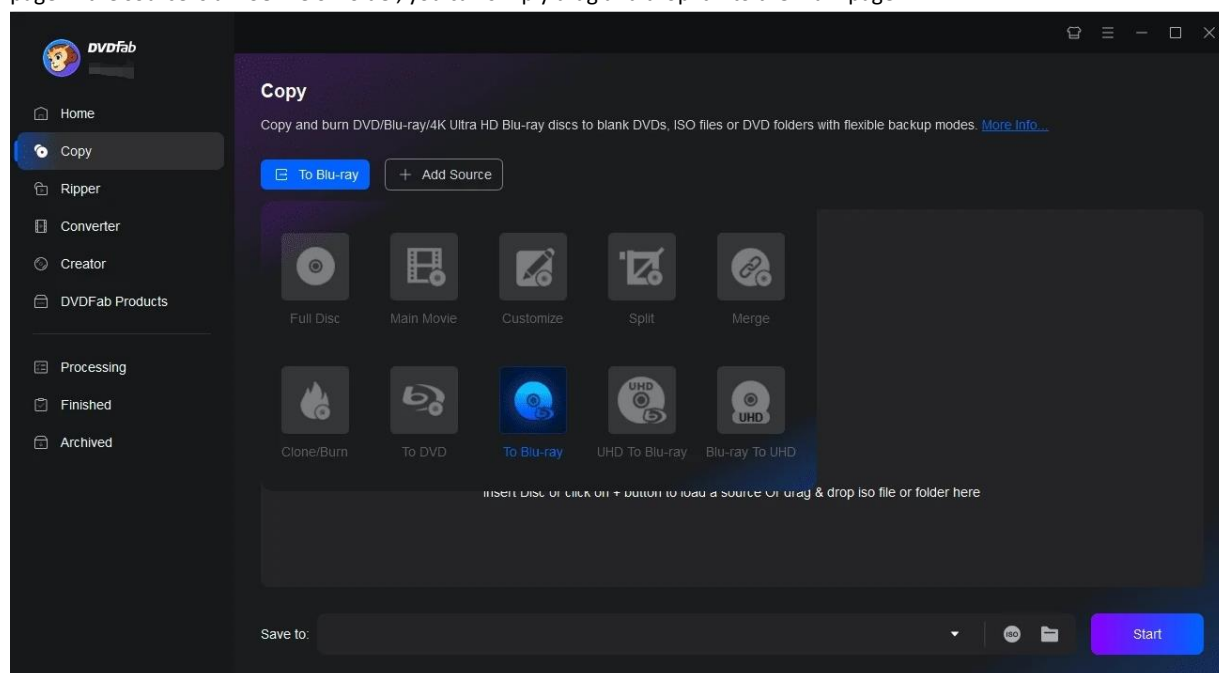

Load the 4K Ultra HD source (a disc, ISO file or folder), click the wrench icon behind the 4K UHD logo to choose your preferred output size, then at the Save to section, choose the output destination, and finally, click the Start button to let go of the copy process.

6.1.2.4 How to use DVD to Blu-ray Converter

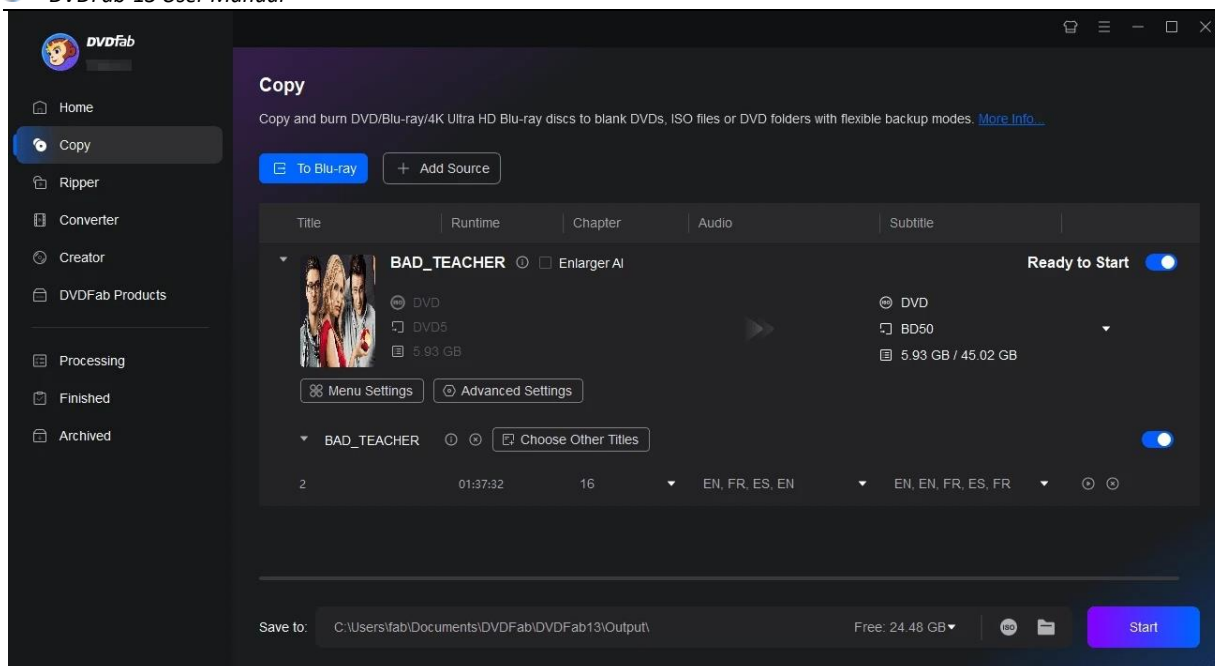

Step 1: Load DVDFab DVD to Blu-ray Converter, and load the source

Double click DVDFab 13, and choose Copy from the option bar. After, click on Copy Mode Switcher and choose To Blu-ray. Insert the DVD disc you want to convert to Blu-ray into the optical drive, or navigate to it with the Add button on the main page. If the source is an ISO file or folder, you can simply drag and drop it into the main page.

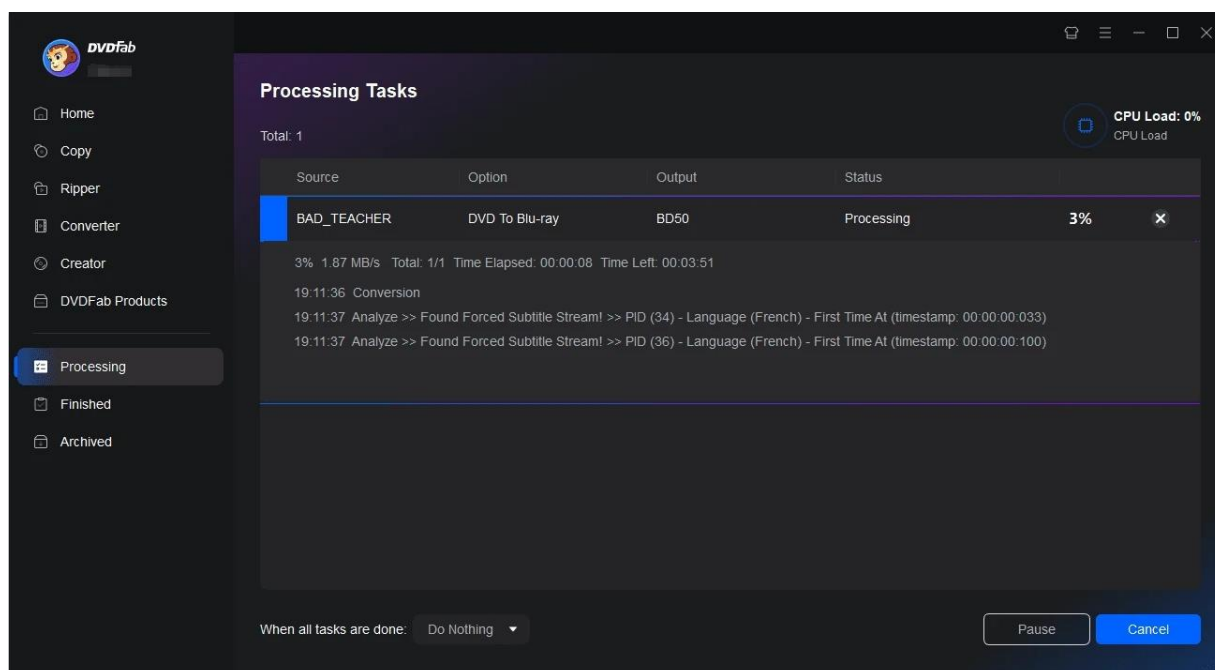

Step 2: Personalize the output Blu-ray

Choose the titles, chapters, audio tracks and subtitles you want, and click the Wrench icon to customize your menu and tweak other settings.

Step 3: Start to Convert the DVD to Blu-ray

After selecting the output directory, click the Start button to begin the process of converting your DVD to Blu-ray. You can see detailed progress info throughout the process.

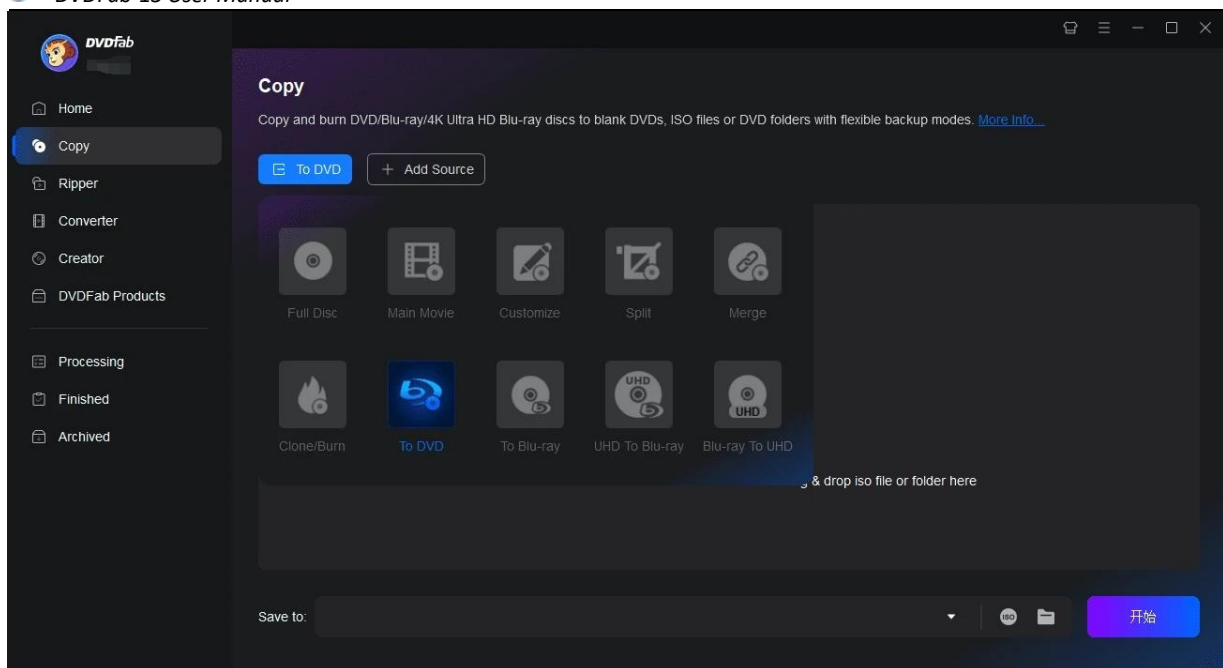

6.1.2.5 How to use Blu-ray to DVD Converter

Step 1: Launch DVDFab Blu-ray to DVD Converter, and load the source

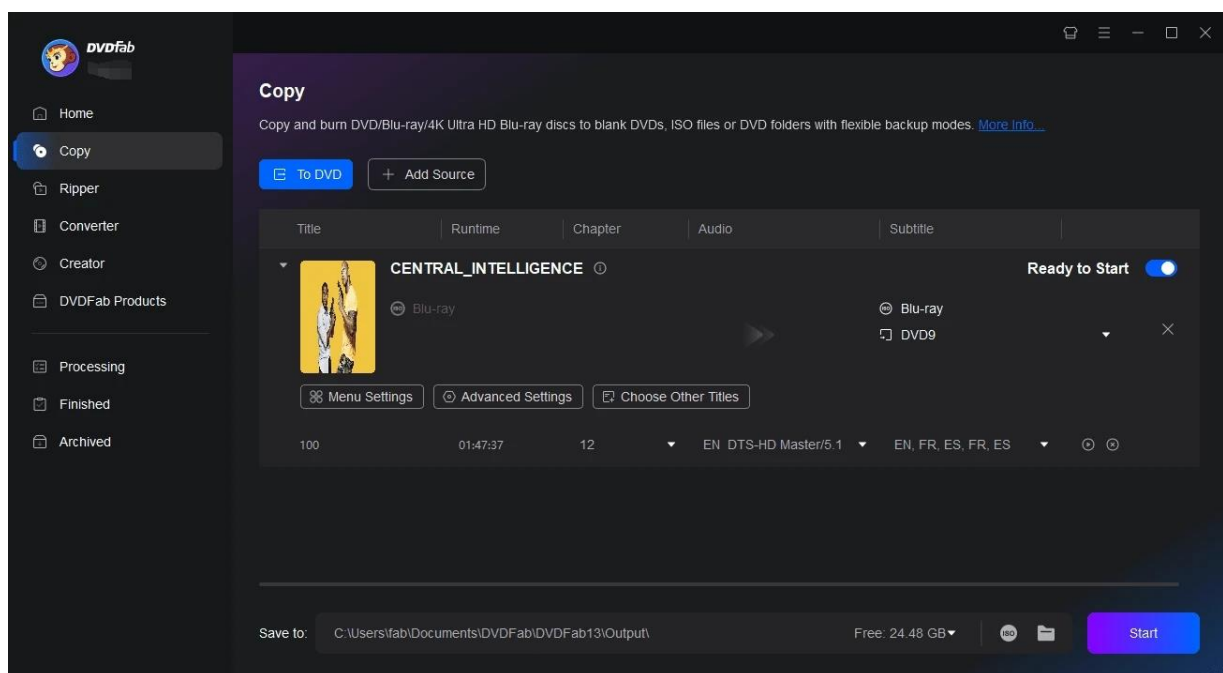

Double click DVDFab 13, and opt for Copy from the option bar when it runs. Then click the copy mode switcher to choose To DVD.

Insert the BD you want to convert to DVD into the external Blu-ray drive, or navigate it through the Add buttons on the main UI if it is already in. When it is an ISO file or folder, you can simply drag and drop it into the main UI for loading.

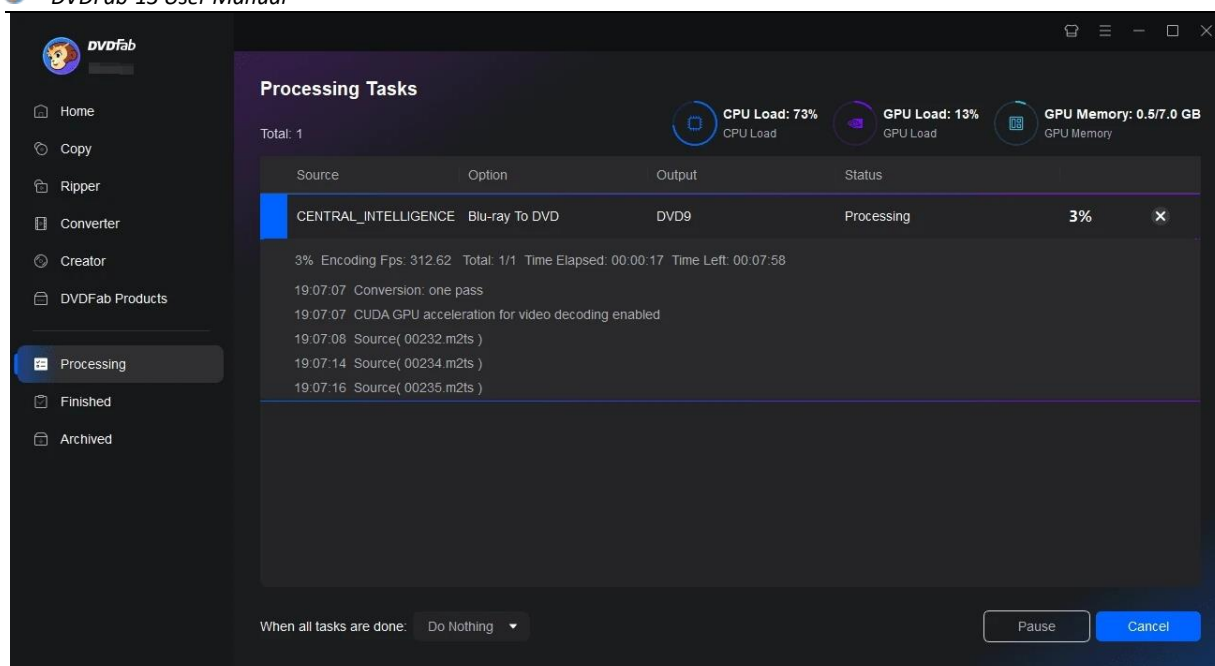

Step 2: Personalize the output DVD

Now you can choose the titles, chapters, audio tracks and subtitles you want, and you can also click the Wrench icon to customize your menu and tweak other settings.

Step 3: Start to Blu-ray to DVD

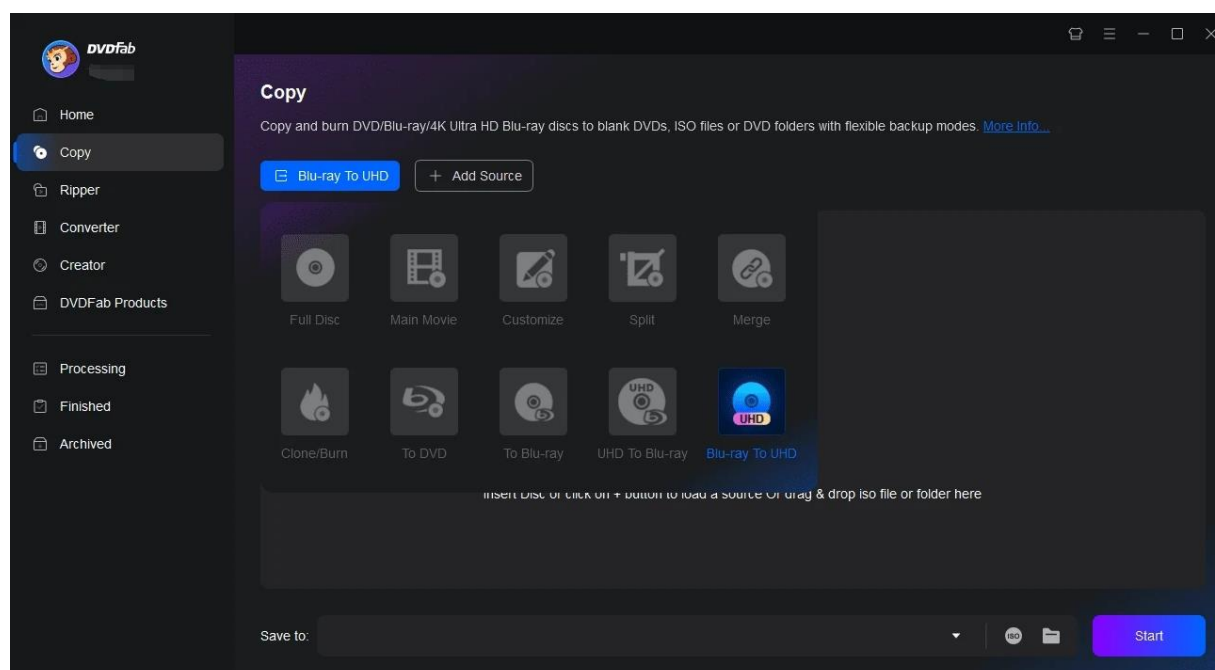

After selecting the output directory, you can click the Start button to start the process of converting Blu-ray to DVD. You can see the detailed progress info during the process.

6.1.2.6 How to use Blu-ray to UHD Converter

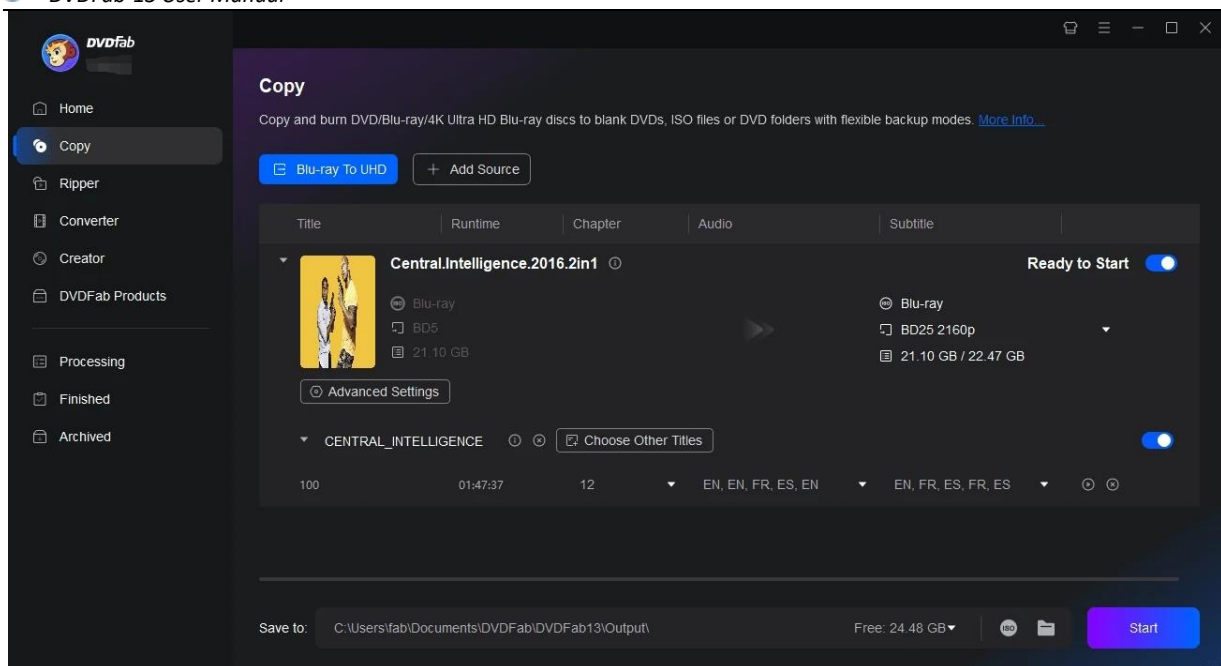

Step 1: Select the source file to be converted

Launch Blu-ray to UHD Converter and choose the target source file for conversion.

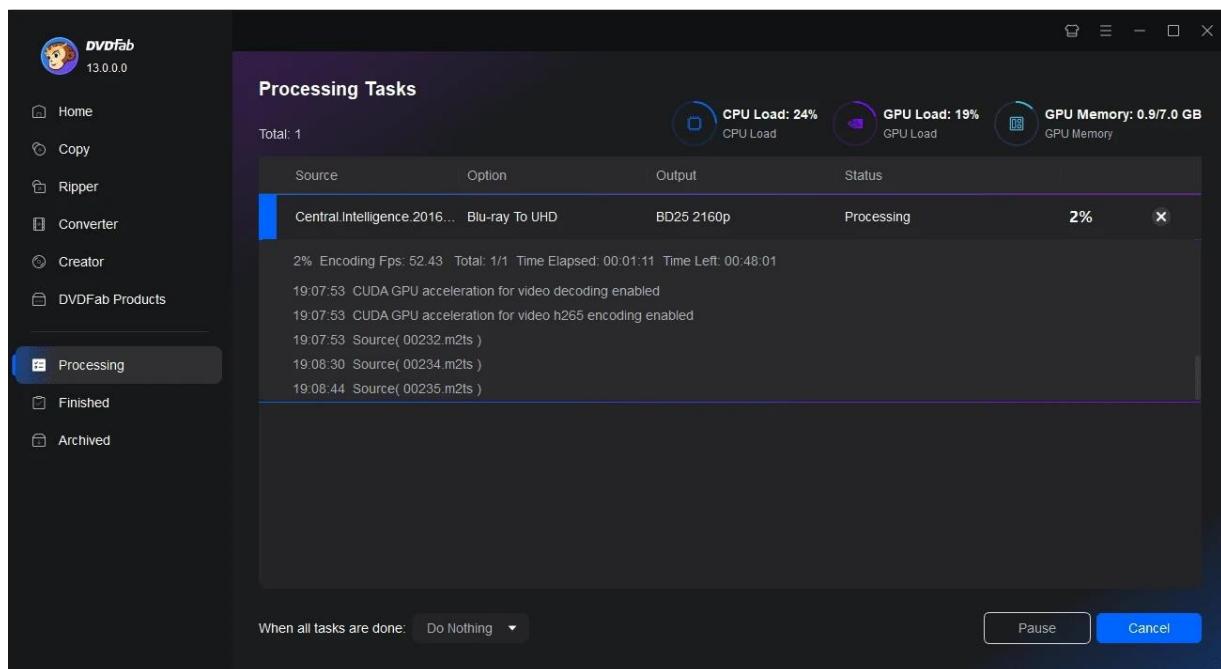

Step 2: Configure conversion parameters and start conversion

Select from various options to determine the output format/quality, processing mode, and video quality.

Step 3: After conversion, the file will be exported

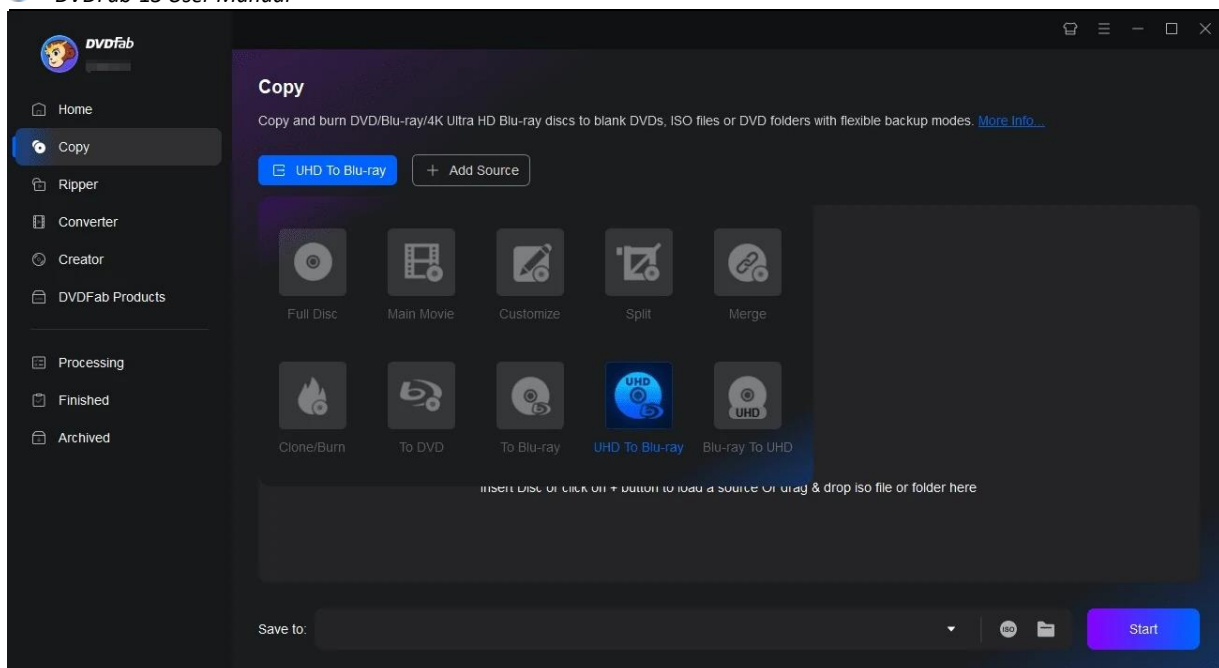

When your standard BD file has been converted to 4K UHD Blu-ray, the output files will be exported.

6.1.2.7 How to use UHD to Blu-ray Converter

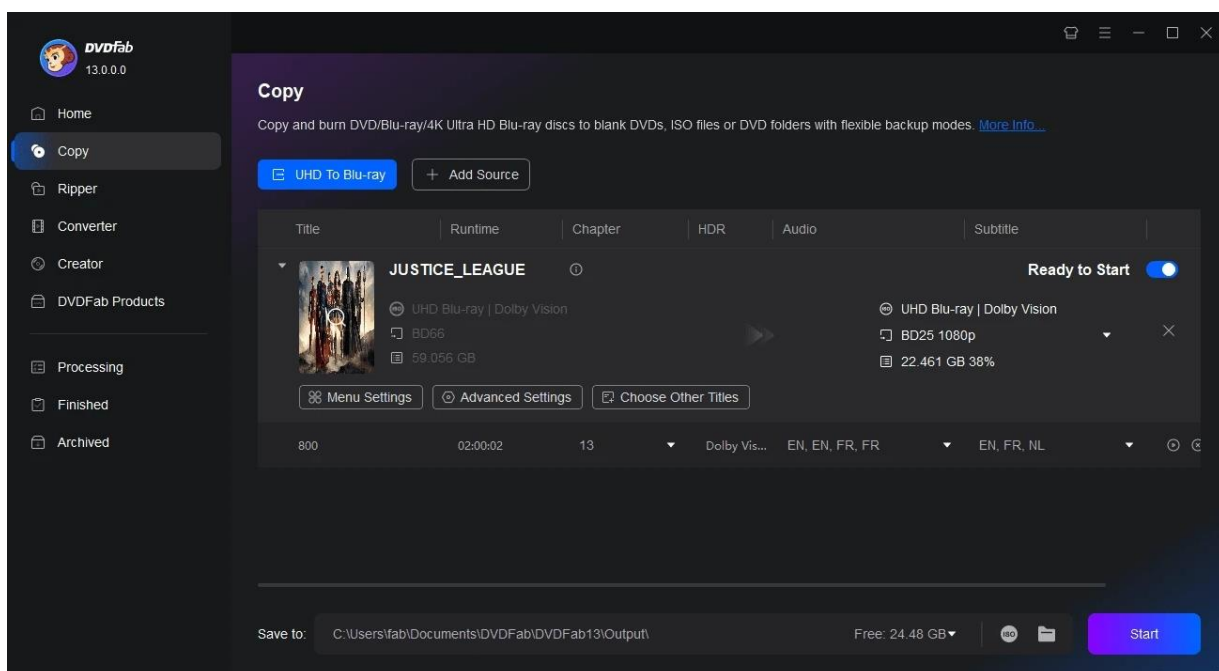

Step 1: Download and install the 64-bit version of DVDFab 13

Only the 64-bit version of DVDFab 13 contains the UHD to Blu-ray Converter module, so make sure you download and install the correct version of DVDFab 13 onto your PC.

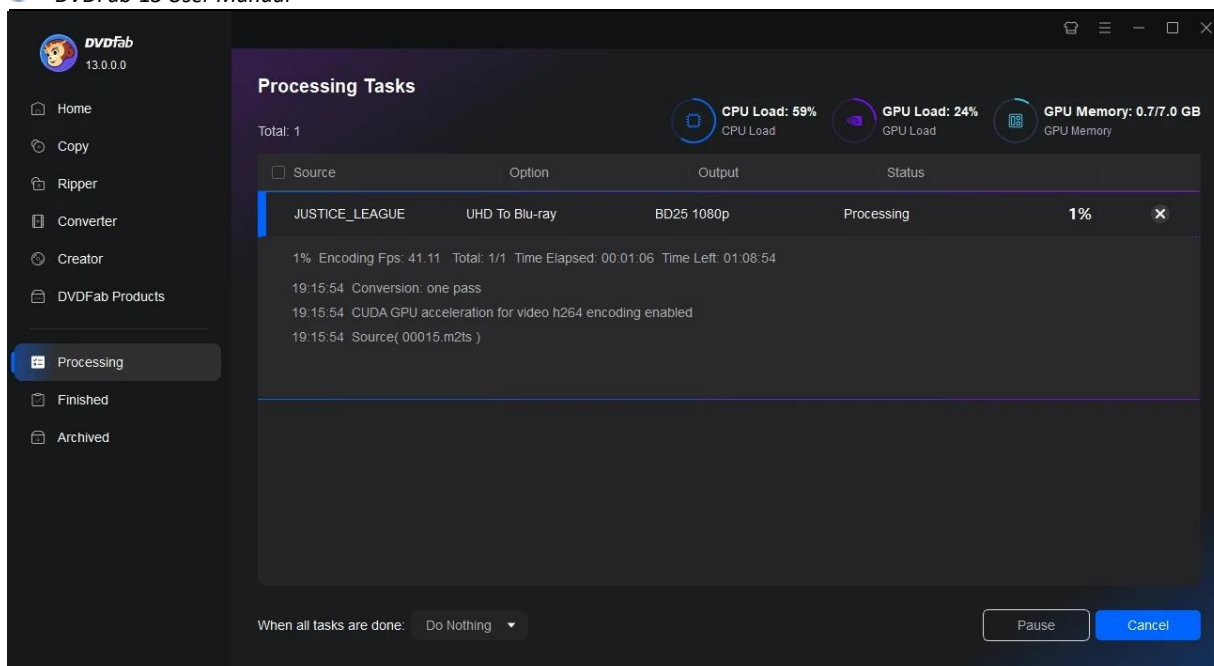

Step 2: Load the UHD Blu-ray to the Copy module

Go to 'Copy' module, click the '+Add' button to load the source 4K Ultra HD Blu-ray (disc/ISO/folder), tab the copy mode switcher and choose 'To Blu-ray' profile.

Step 3: Customize output Blu-ray and start to convert

Select your desired titles, audio tracks, subtitles, output size, file destination, menu mode and playback mode. Once done, hit 'Start' and wait for the final product.

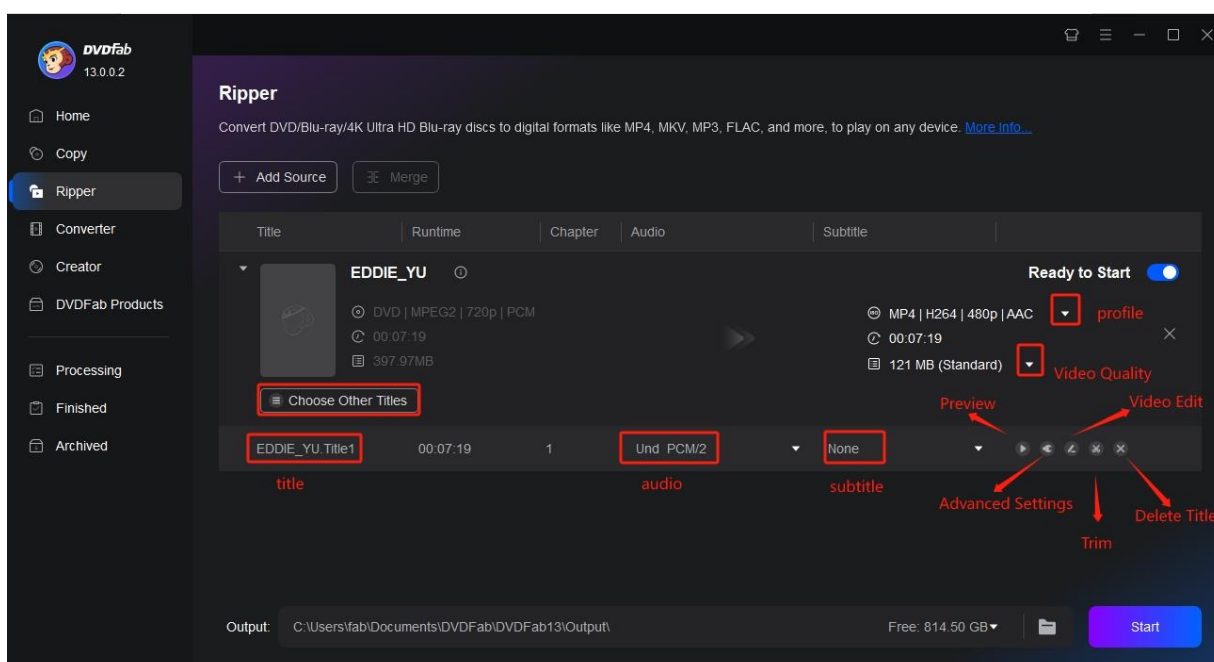

6.2 Ripper Mode

6.2.1 Introduction of Ripper Mode

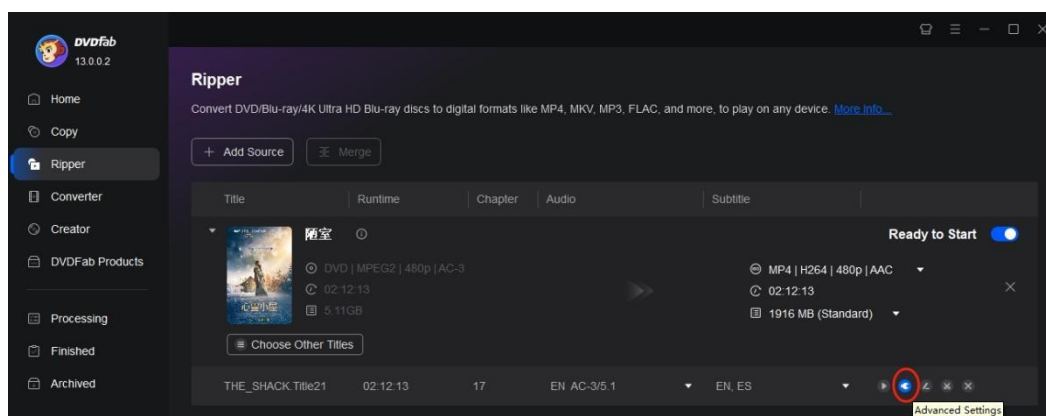

In this place, you can use the DVDFab products including DVD Ripper, Blu-ray Ripper and UHD Ripper.

You may also see the **Title**, **Runtime**, **Chapter**, **Audio** and **Subtitle** of the source. You can **Choose Other Titles**, set the **Profile**, **Video Quality**, **Advanced Settings**, **Video Edit** and **Trim** the video or **Preview**, **Delete** the Title.

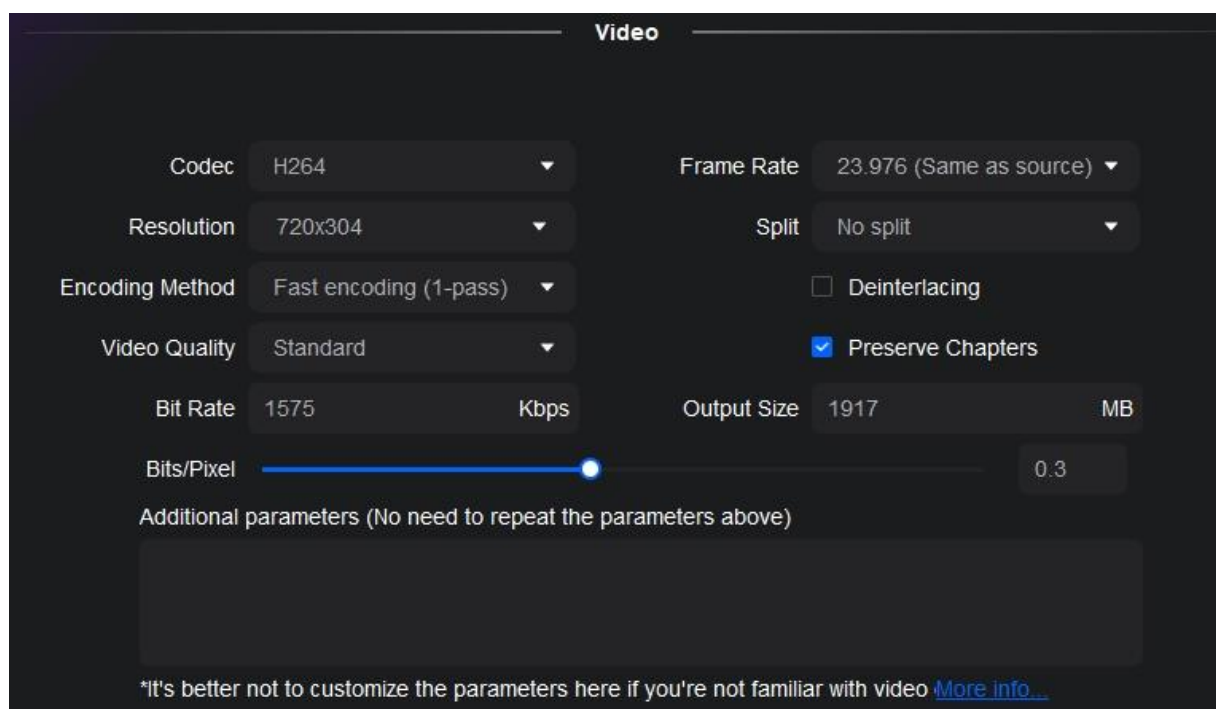

The **Advanced Settings**, or the wrench button  appears when the source is loaded, and is next to the

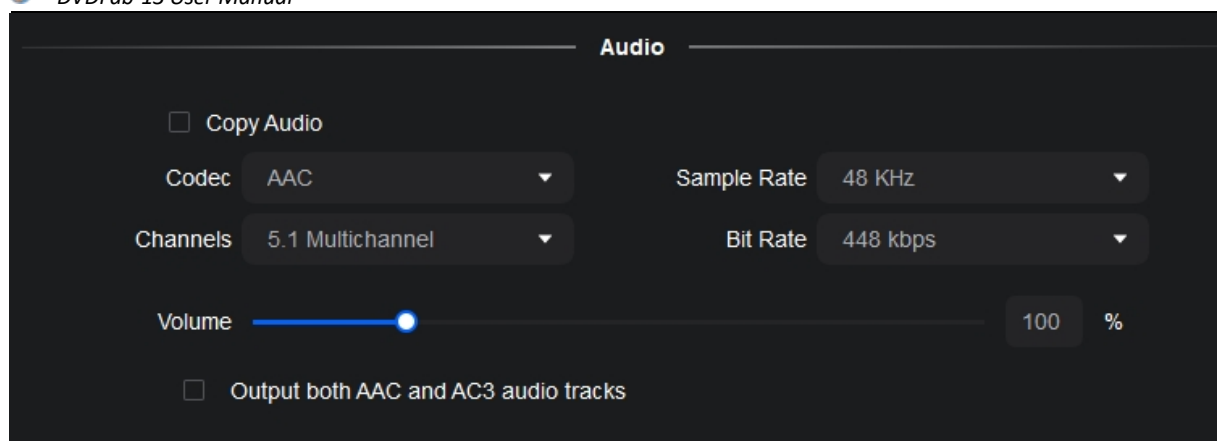

Video Edit button in the **Source Info** bar. You can click Advanced Settings button to preset the video, audio and subtitle parameters, if necessary.

a) Video Settings: In this section, you can change video codec, encoding method, resolution, and frame rate; set video quality, bit rate, output size, and bits/pixel; choose deinterlacing or not; split by chapter or not.

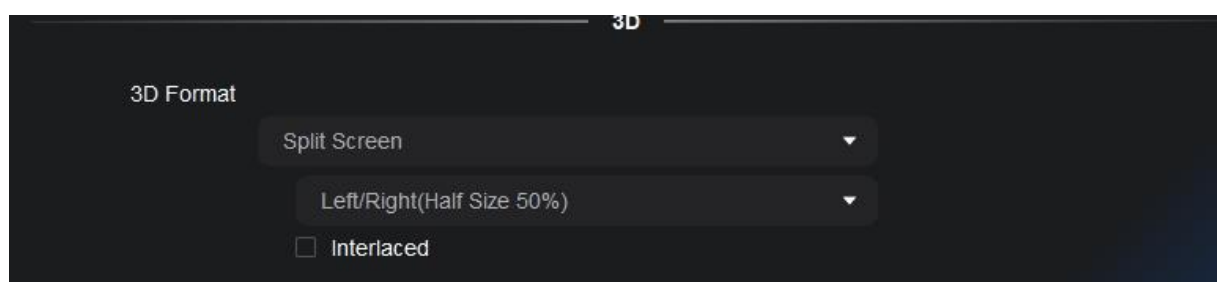

b) Audio Settings: Similar to video settings, at the Audio section, you can preset audio codec, sample rate, audio channel, bit rate, volume, and determine whether to output both AAC and AC3 audio tracks.

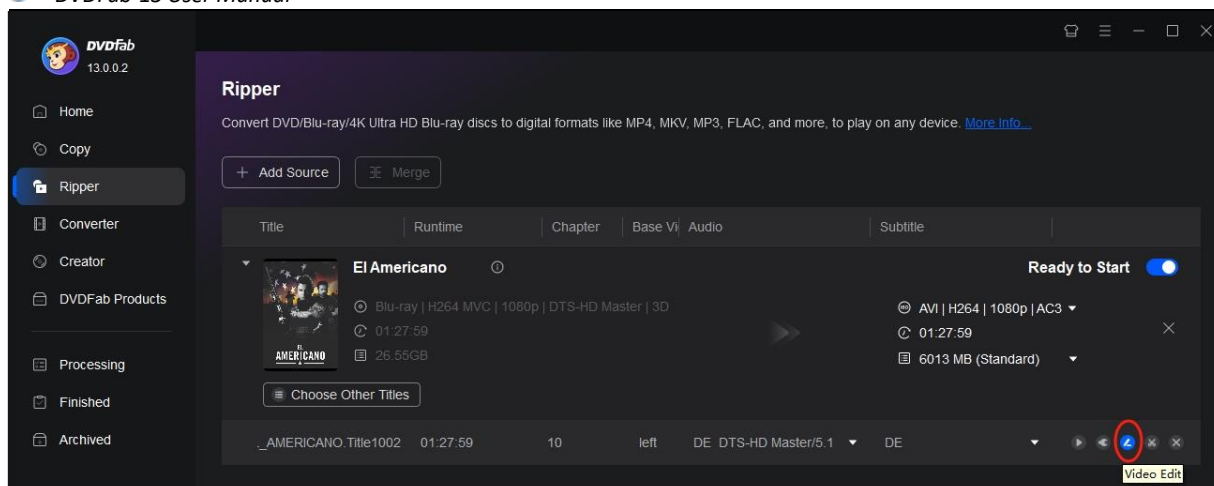

c) Subtitle Settings: this section lets you decide how to deal with the subtitles during the ripping or converting process. Choices vary from one case to another: extract to idx/sub file, direct render to video, depending on how many subtitle streams you want to keep, what profile you choose and, what device you are going to view the resulting video on.

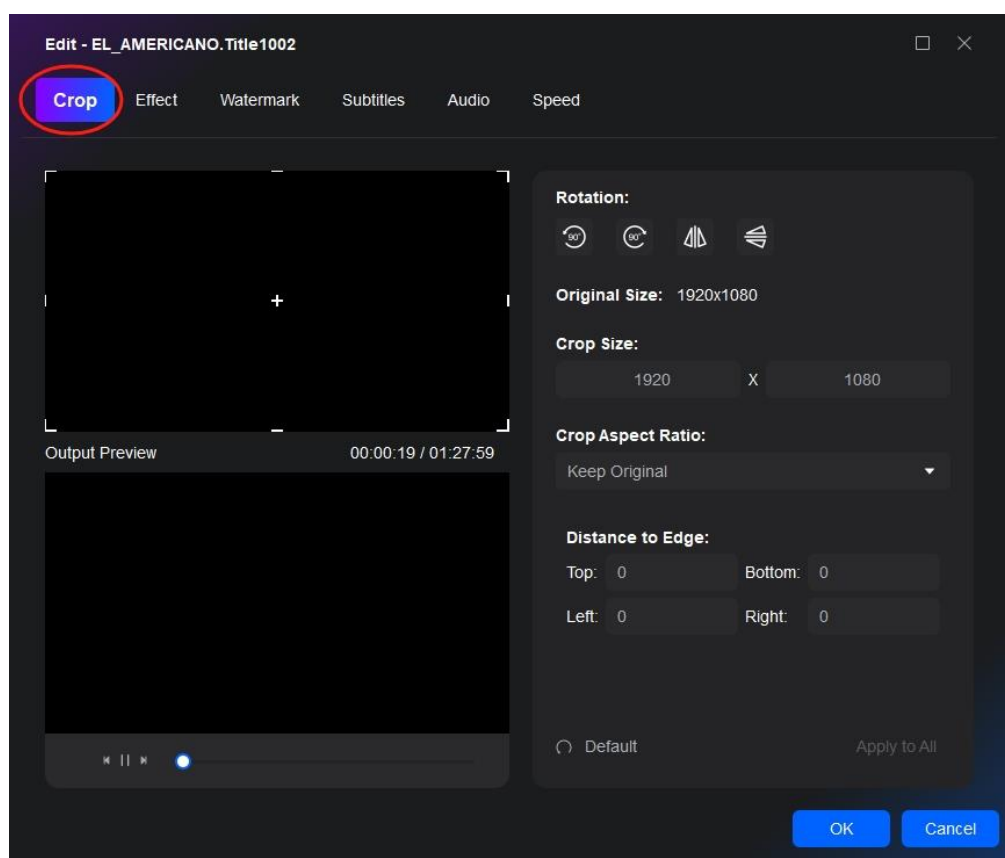

d) 3D Settings: 3D settings section will be activated only if you choose a 3D profile from the profile library. In this section, you can choose 3D format from Anaglyph, Split Screen, Two separate files and Two video streams in one file; set values for Gain and Visual Depth.

Right next to the wrench button in the main interface of the Ripper module, aka the Advanced Settings button, is the **Video Edit** button, the one looks like a pencil. This button leads to the **Video Edit** Window, formerly known as the Video Edit Settings panel in version 11 and version 12. However, in version 13, the Video Edit window is completely redesigned from scratch, introducing some long-awaited features and delivering a much better user experience.

(1) Crop

The Crop function lets users decide which part of the display area should be kept in the converted result, which is especially helpful when the source video has large portion of black bars around.

Rotation: It allows users at the popup panel to rotate the video 90 degrees clockwise or counter clockwise, mirror left and right and mirror up and down.

Crop Aspect Ratio: vary from Auto, Original (means not be cropped at all), 4:3, 16:9, Full Screen, Letterbox and Pan & Scan to Customize.

Distance to Edge: Increase or decrease the values of Top, Bottom, Left and Right with the triangle button and the inverse triangle button or just type in the real value at the given four text boxes to specify how to deal with the display area. After that, the width and height of the output display area will be changed correlatively. Besides, you can also crop it at the Source displaying part manually.

(2) Effect

The Effect function can allow you adjust the brightness, contrast and saturation via the three sliding bars respectively, or by directly entering the values at the three boxes behind.

(3) Watermark

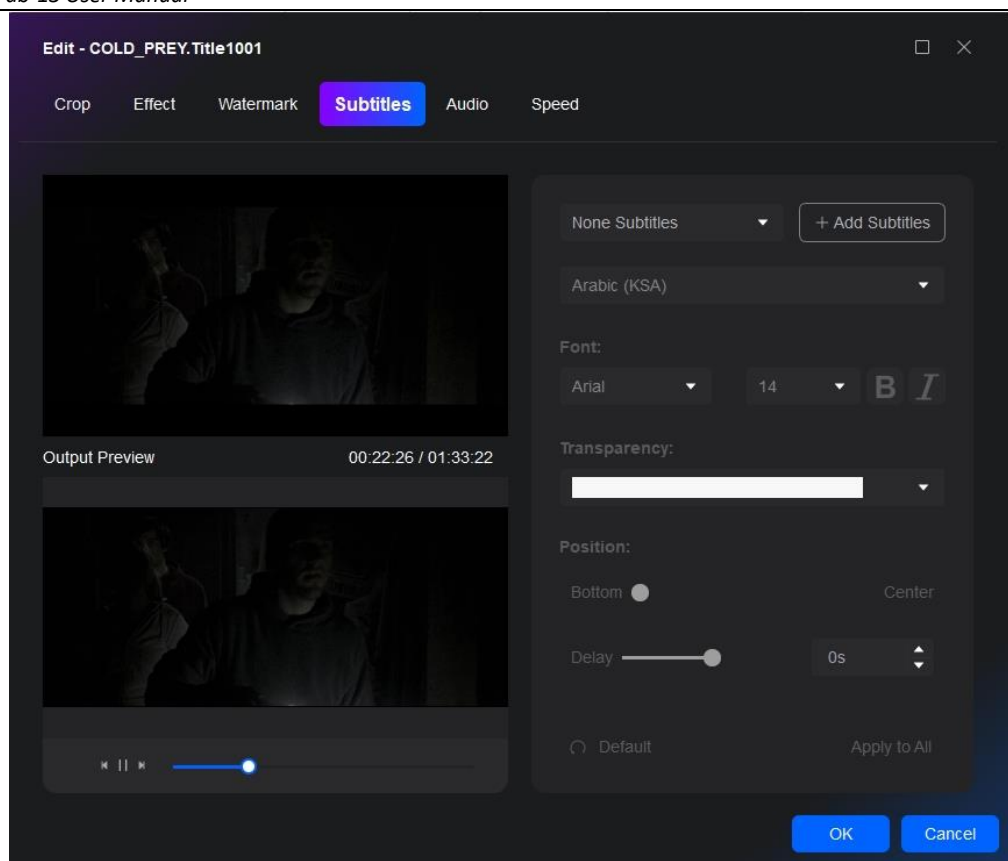

Depending on your preference, you can plant a watermark into your video, with a string of texts or a picture of your favorite.

To add a string of texts, you can click “**Text**” and type your wanted texts. You can see the texts at both the Source and Output Preview windows. Besides the font, size, color, style and transparency that you can freely adjust, you can also decide which part of the screen your texts will stay, simply by dragging the text box at the **Source Preview window** to reposition.

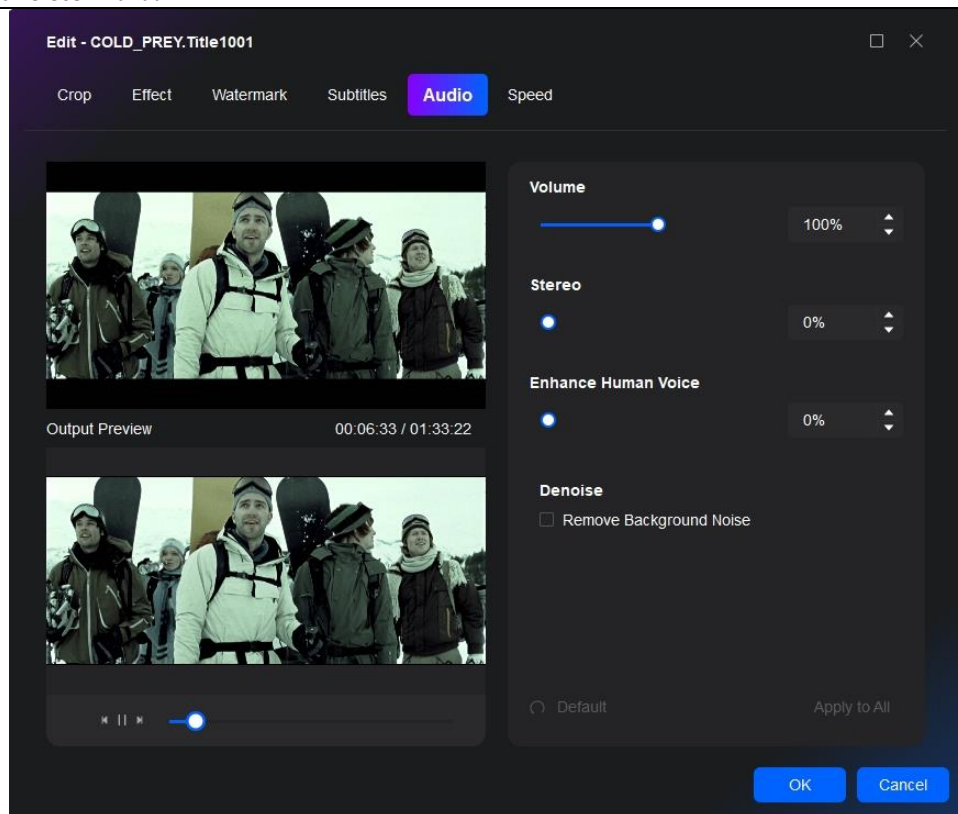

To add a picture, click “**Pic**” to select your preferred image from your computer hard drive. Like the text watermark, you can adjust the transparency of the image, and drag it at the Source Preview window for relocation.

(4) Subtitles

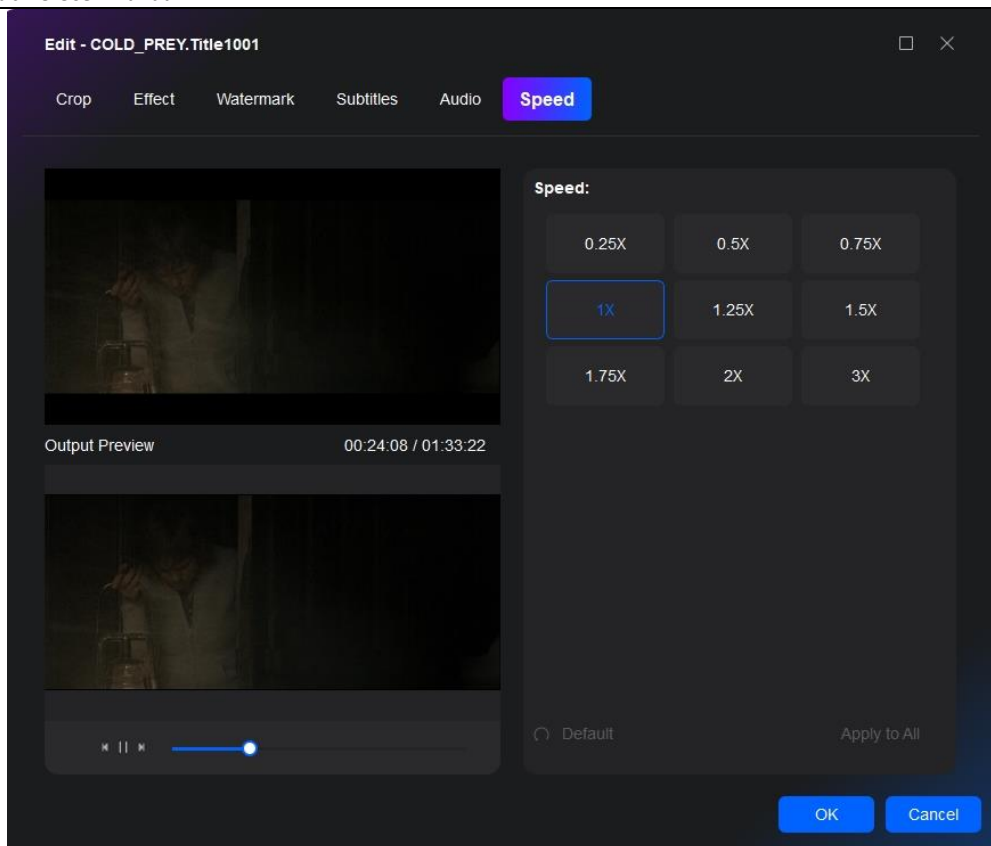

If it's necessary to add your own external subtitles, you can click on the “Add Subtitles” button, and then choose the subtitles file from your HDD. Based on your needs, you can decide the subtitles properties, such as font, size, style, language, position on the screen, etc. You can also set the delay time so that the subtitles can match the playback perfectly.

(5) Audio

You can adjust the Volume and Stereo or enhance human voice via the sliding bars respectively, or by directly entering the values at the three boxes behind. To use the Denoise function, you can check the option “Remove Background Noise”.

e.6 Speed

You can set the video playback speed to 0.25x, 0.5x, 0.75x, 1x, 1.25x, 1.5x, 1.75x, 2x and 3x.

Right next to the Video Edit button in the main interface of the Ripper module, is the **Trim** button, the one looks like a scissors.

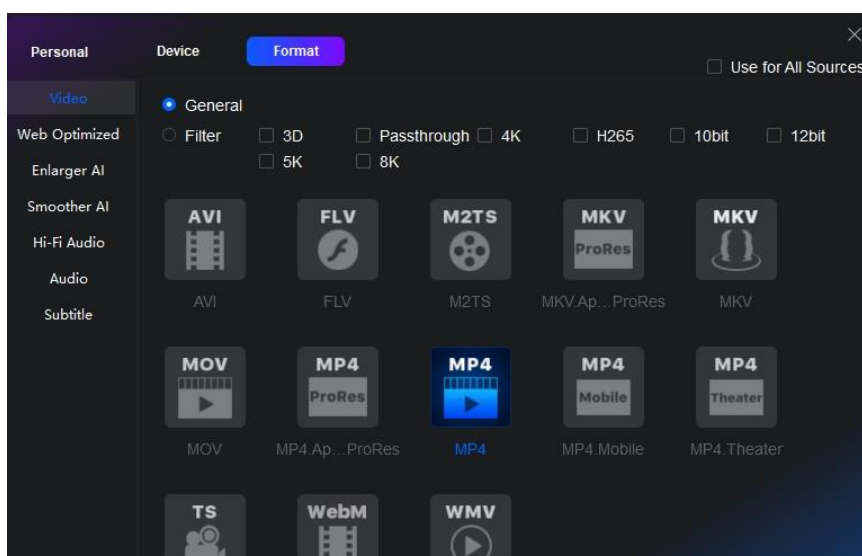

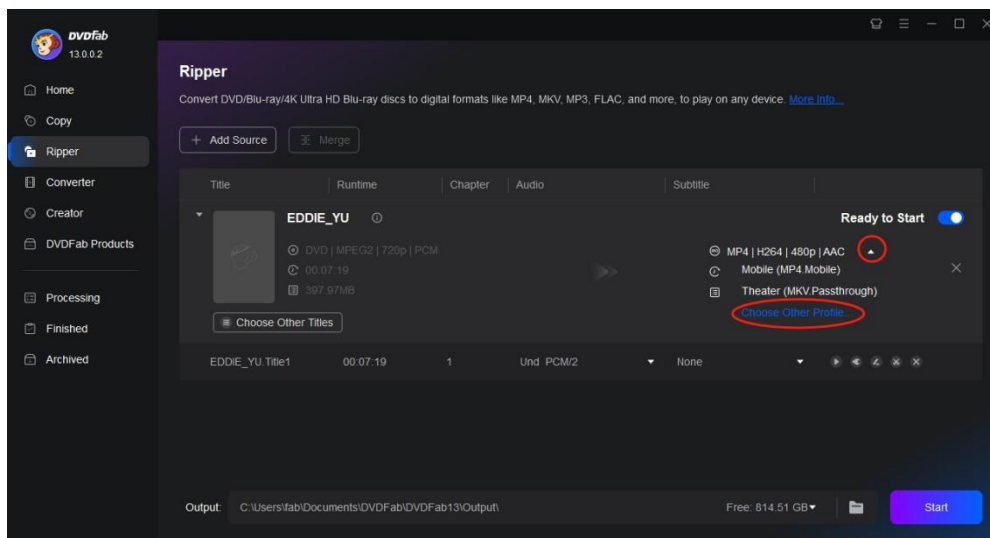

The new Trim feature in version 13 makes it easier for users to cut off the unwanted clip duration from the video that being edited.

Step1: Click the time point you want to trim.

Step2: Click the scissors icon to trim the video.

Step3: Don't forget to save trimmed video.

In Ripper tool, you can choose the profile to convert the files. You may click the little down-triangle button and click **Choose Other Profile**.

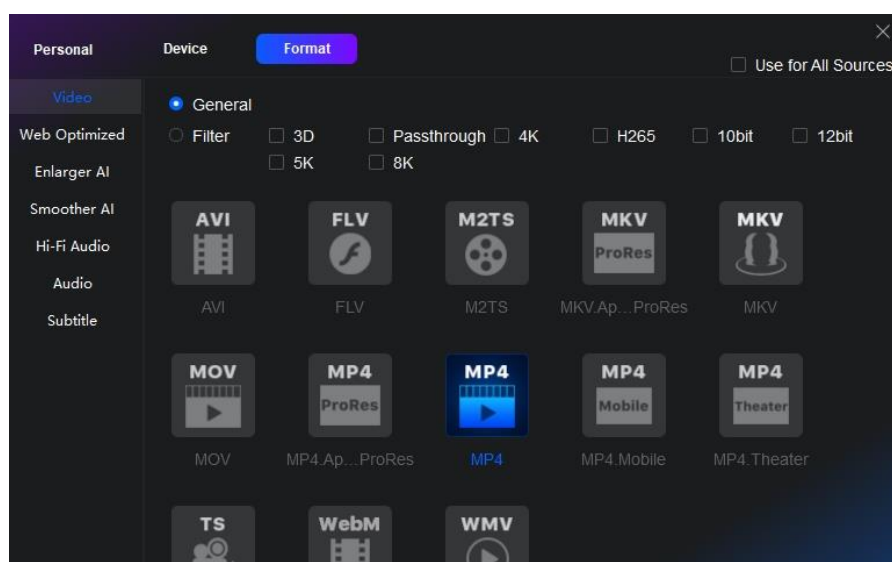

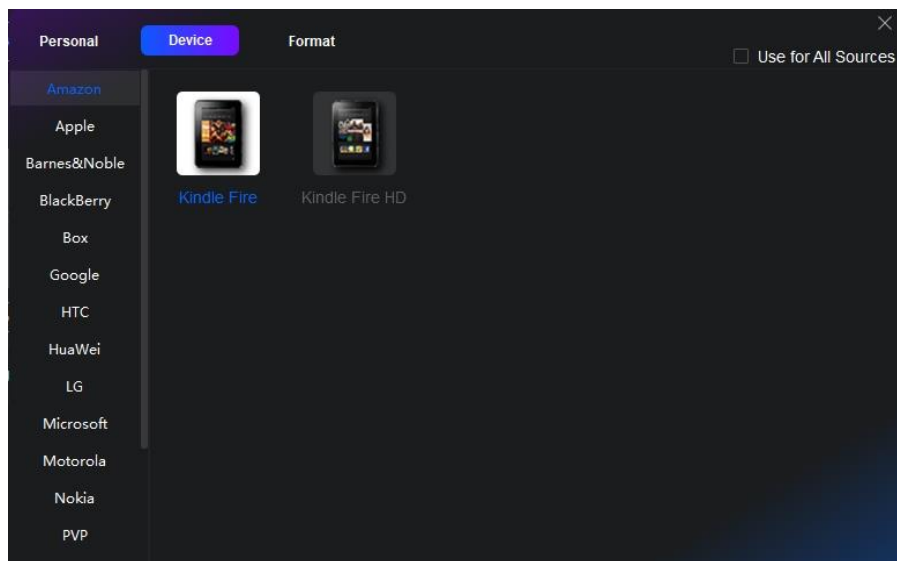

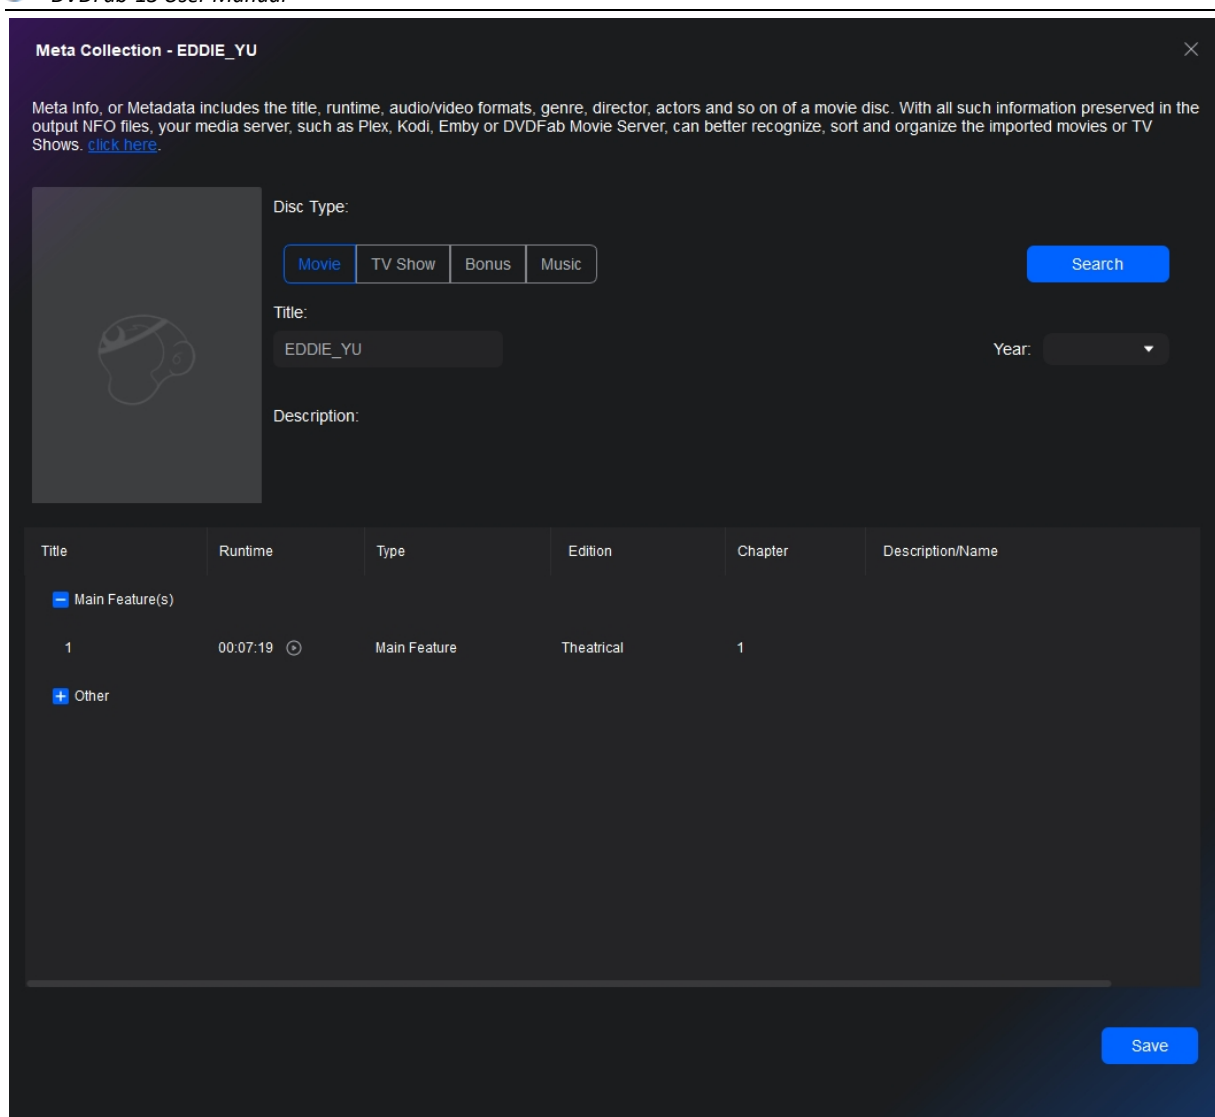

When you click the **Profile Switcher**, the program will direct you to the **Profile Library**. This Profile Library stores a ton of predesigned profiles targeting at a great variety of video formats and devices made by almost all the popular manufacturers worldwide. They are well organized based on the manufacturers or video formats. You can easily find and select the one you need.

The greatest benefit of these pre-configured conversion profiles is that developers have run tens, if not hundreds, of times of tests, just to make sure they produce the device-ready videos flawlessly. This is to say, if you don't really know what video formats your device support, or you simply are not tech-savvy enough to figure out what those parameters are all about, then you can just select the profile here to convert your DVDs, Blu-rays, 4K UHD Blu-rays or videos to watch on your target devices. As our developers have done all the research, so you don't have to.

At the bottom right corner of each profile lays a blank five star. You can click to color it, meaning this

colored profile is the one you use at a regular basis, and by coloring it, you have added it into your **Favorite** profile lists available at the **Personal** area. Next time you start a new task, you just need to go to the Personal area and select it. Of course, you can also unmark a profile to remove it from your Personal collections.

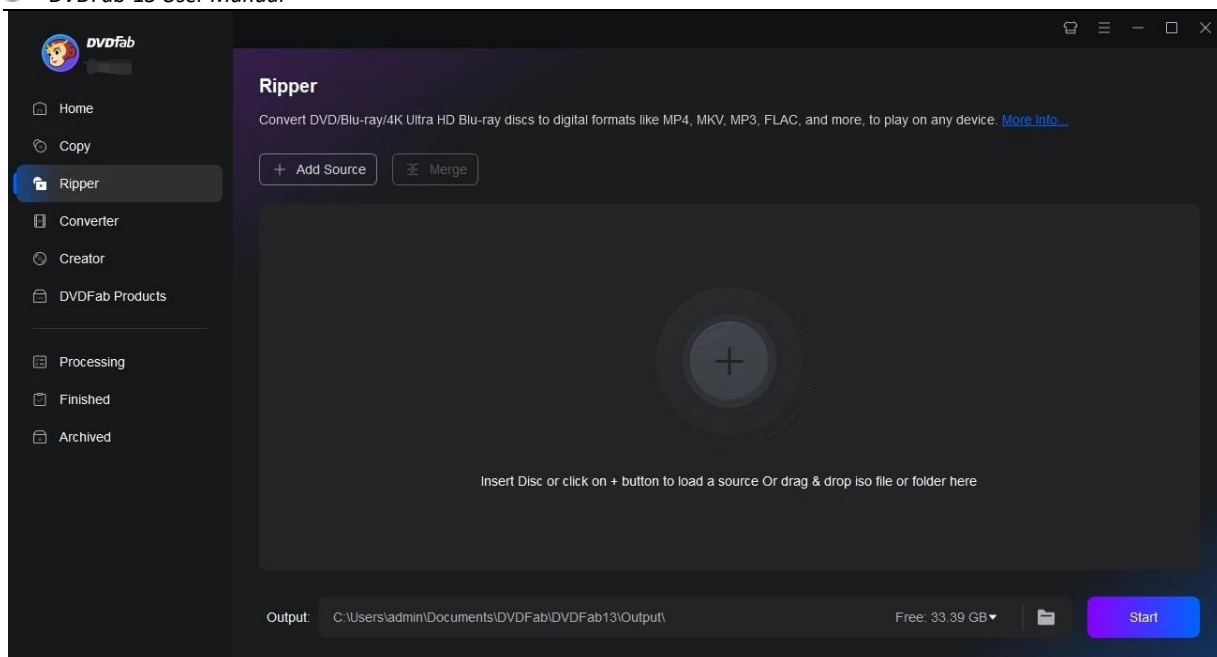

6.2.2 How to use the products in Ripper Mode

6.2.2.1 How to use DVD Ripper

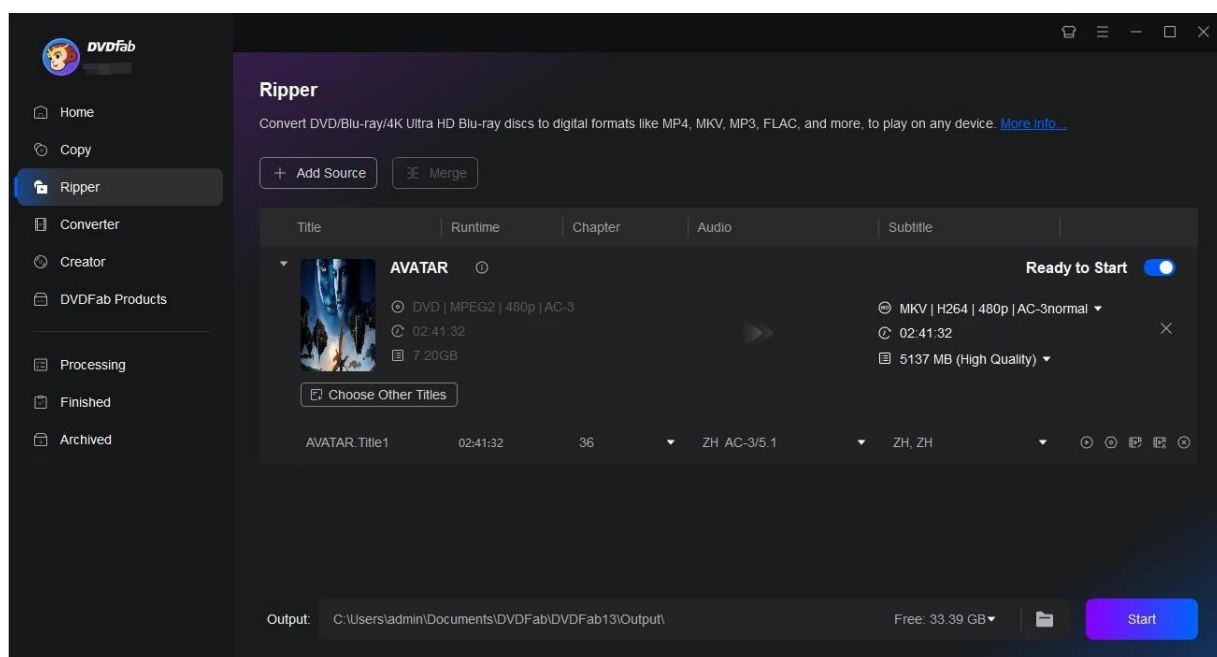

Step 1: Launch DVDFab and load the DVD source.

Run DVDFab 13 and select the Ripper option. Insert your DVD disc into the optical drive or navigate to it via the Add button. If the source is an ISO file or a folder, simply drag and drop it onto the workspace.

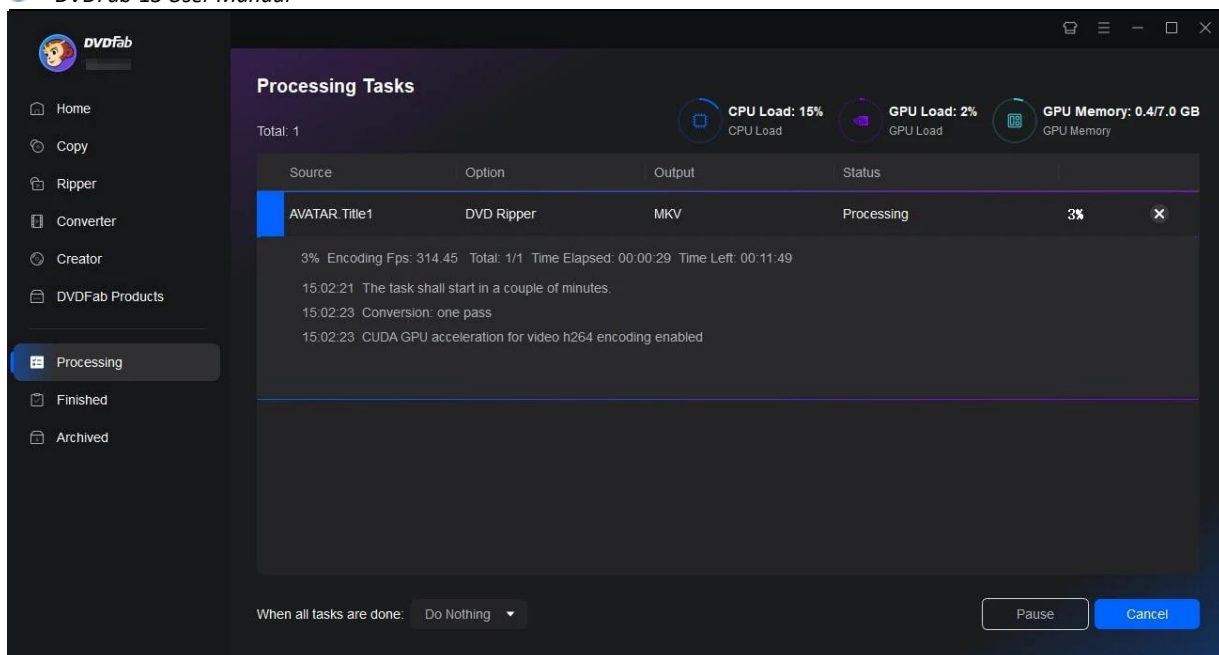

Step 2: Choose one profile and customize the output DVD video.

Click "Choose Other Profile" to select an output format. Options are available to select audio tracks and subtitles, set video and audio parameters, and more.

Step 3: Start to rip DVDs for free and fast.

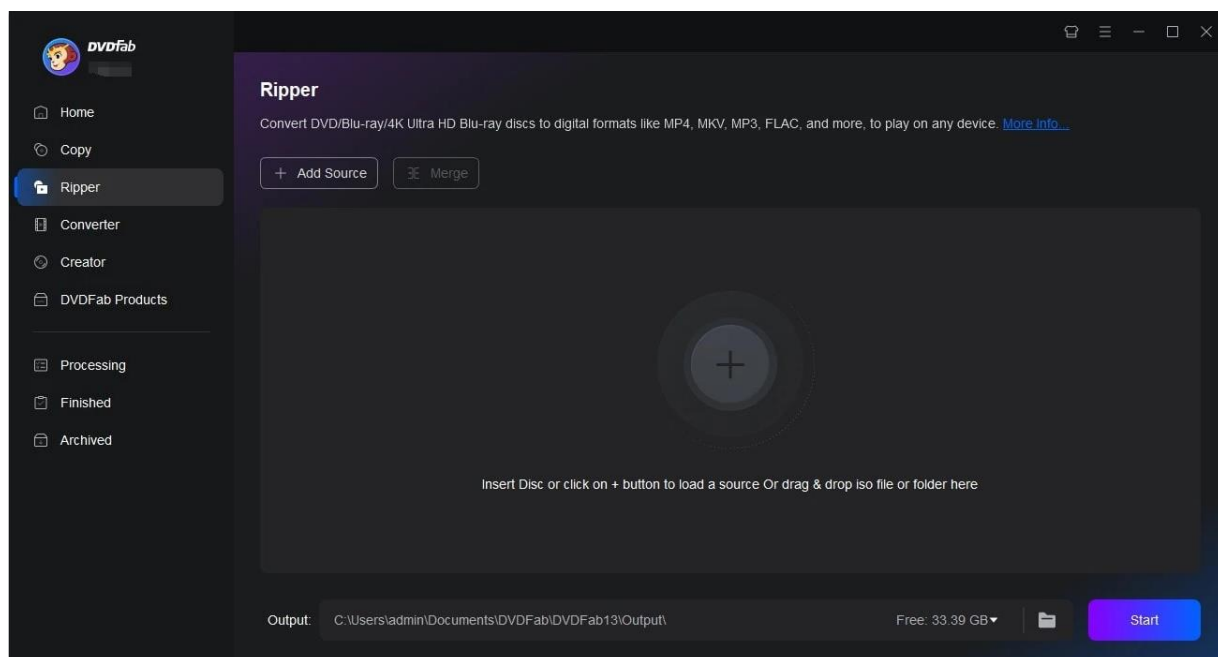

Save your video on your HDD, Mobile device, or upload it to YouTube. Click the Start button, and the actual DVD ripping process will be clearly shown.

6.2.2.2 How to use Blu-ray Ripper

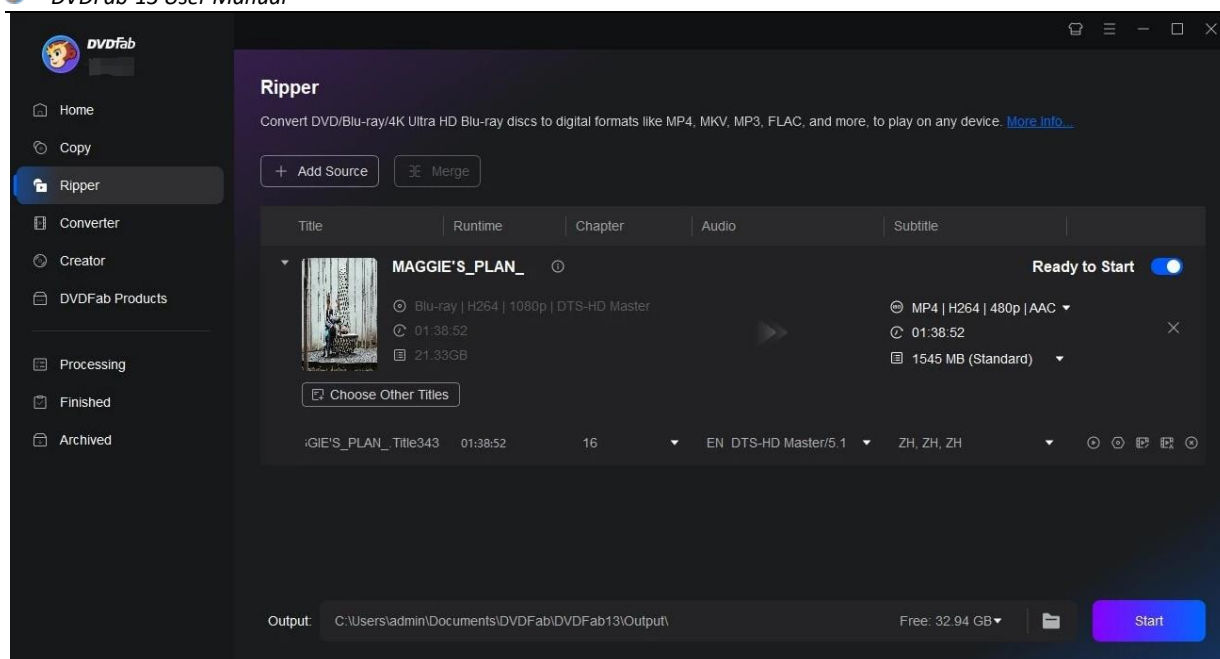

Step 1: Launch DVDFab and load Blu-ray disc/ISO/folder

Run DVDFab 13 and opt for the Ripper module. Insert BD into the external Blu-ray drive, navigate it through the Add button, or drag and drop an ISO file or folder onto the main UI.

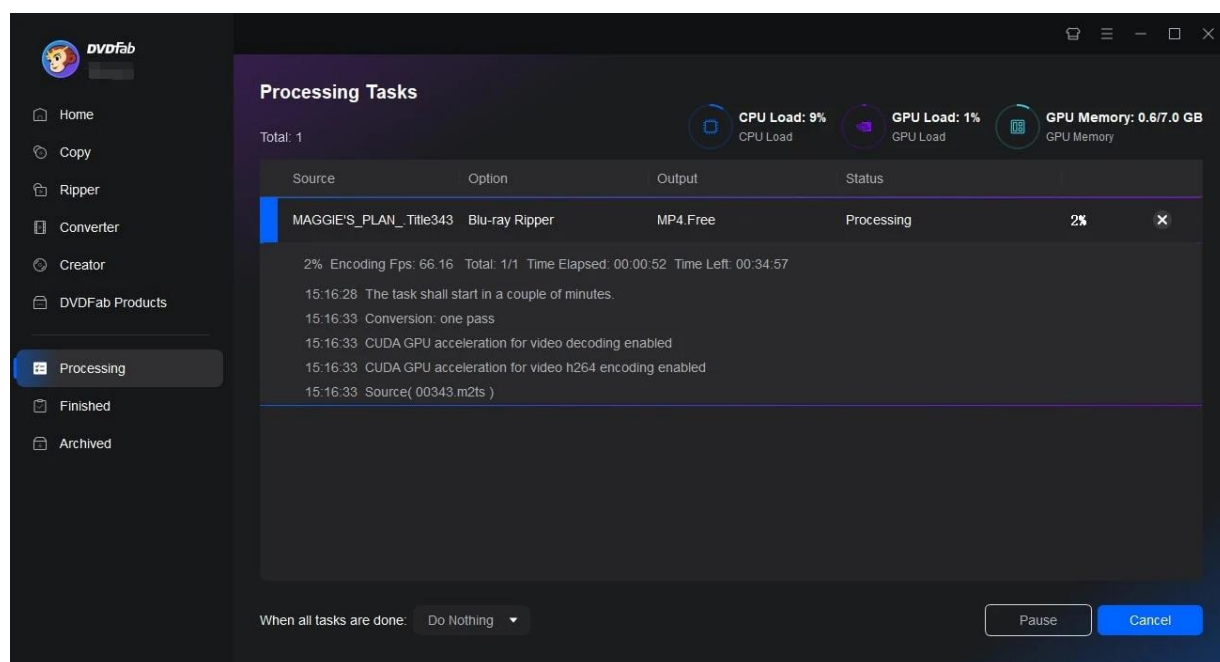

Step 2: Choose one profile and customize the output video.

Click Choose Other Profile to select your desired profile. Select the titles, audio tracks, and subtitles you want to retain. Turn to the 'Advanced Settings' and built-in 'Video Editor' to customize the output video.

Step 3: Start to rip a Blu-ray

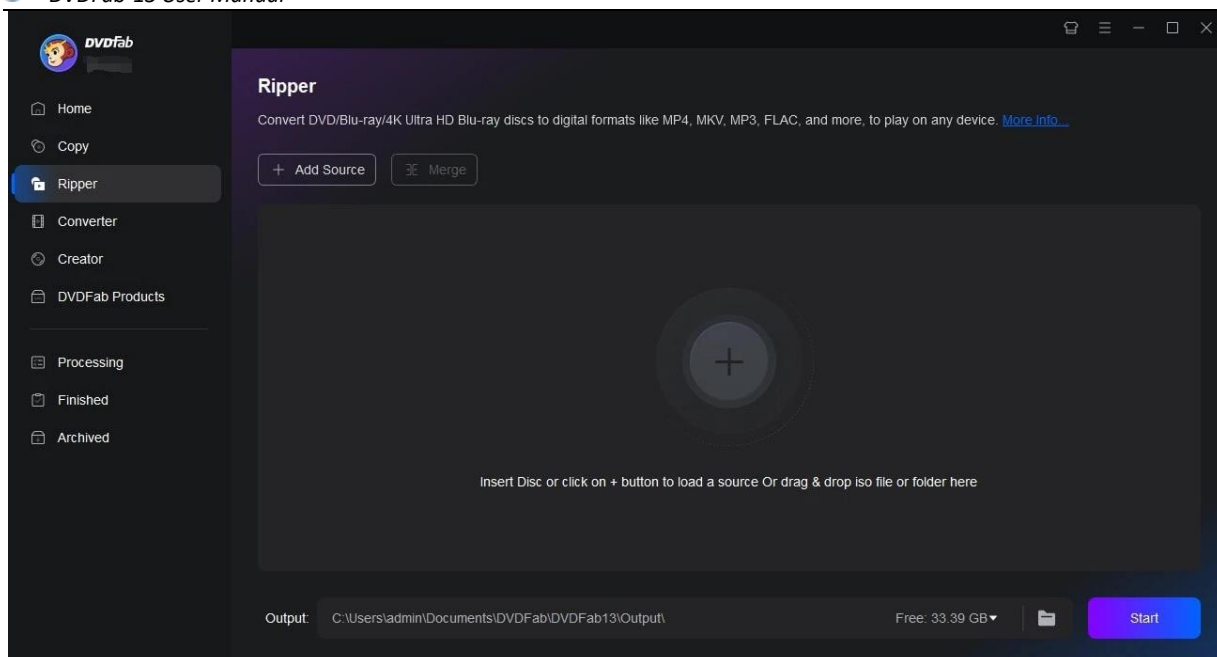

Save your video on your HDD, Mobile device, or upload it to YouTube. Click the Start button, and the free Blu-ray Ripper will promptly begin ripping Blu-ray and show detailed progress information.

6.2.2.3 How to use UHD Ripper

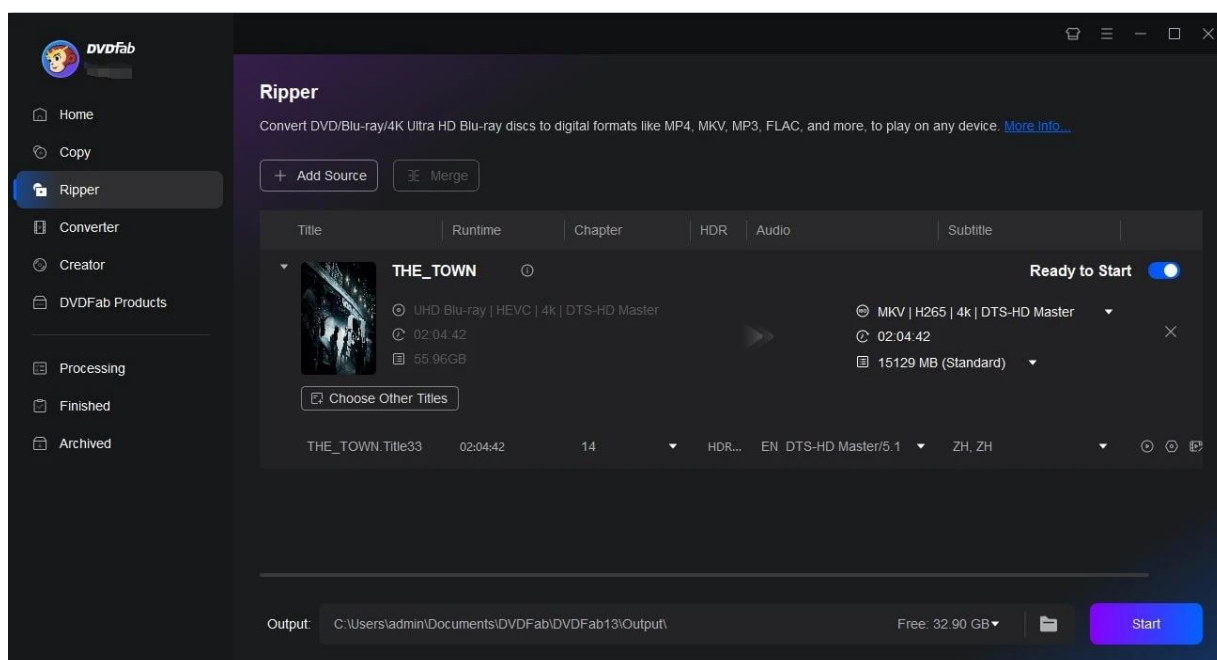

Step 1: Launch DVDFab 11 and load the 4K Ultra HD Blu-ray to the Ripper module

After downloading and installing the latest 64-bit version of DVDFab 11, launch the program and navigate to the Ripper module, and then load the 4K Ultra HD Blu-ray source.

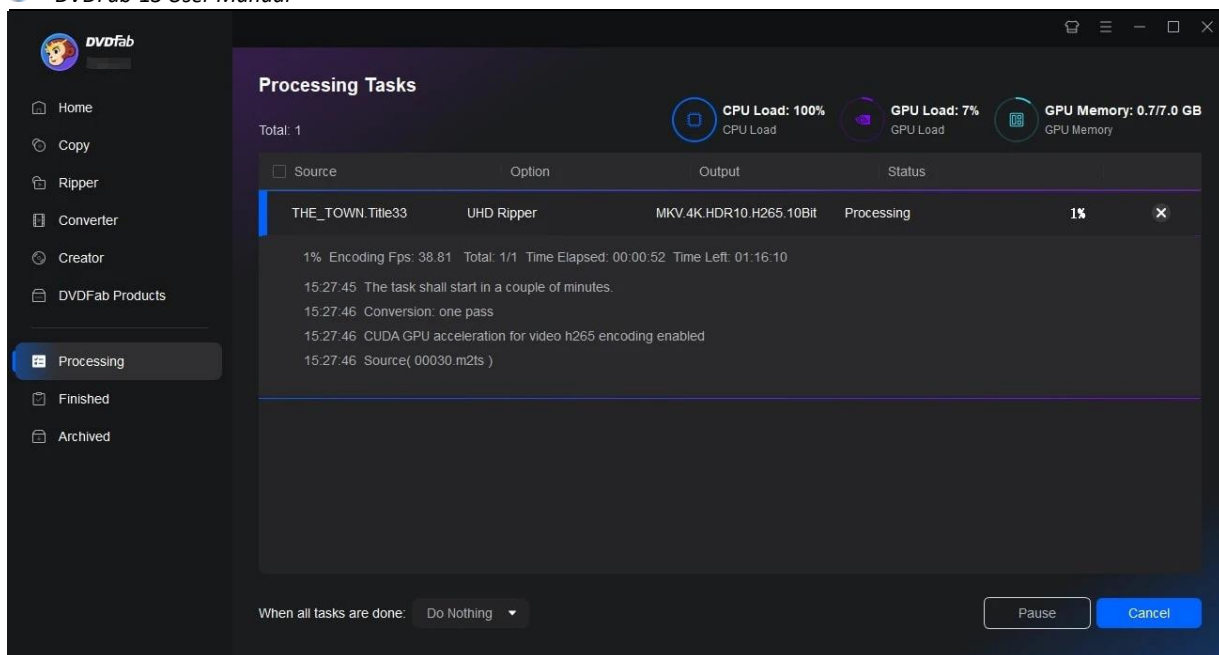

Step 2: Select a preferred conversion profile and customize necessary parameters

Click the Profile Switcher to select your preferred one from the available 6, which are exclusively made for the UHD Ripper, namely, the MKV Passthrough, M2TS Passthrough, MKV.4K.H265.10bit, M2TS.4K.H265.10bit, MP4.SDR and MKV.SDR. Then depending on which profile you choose, you may have varying options to customize detailed settings.

Step 3: Start the conversion process

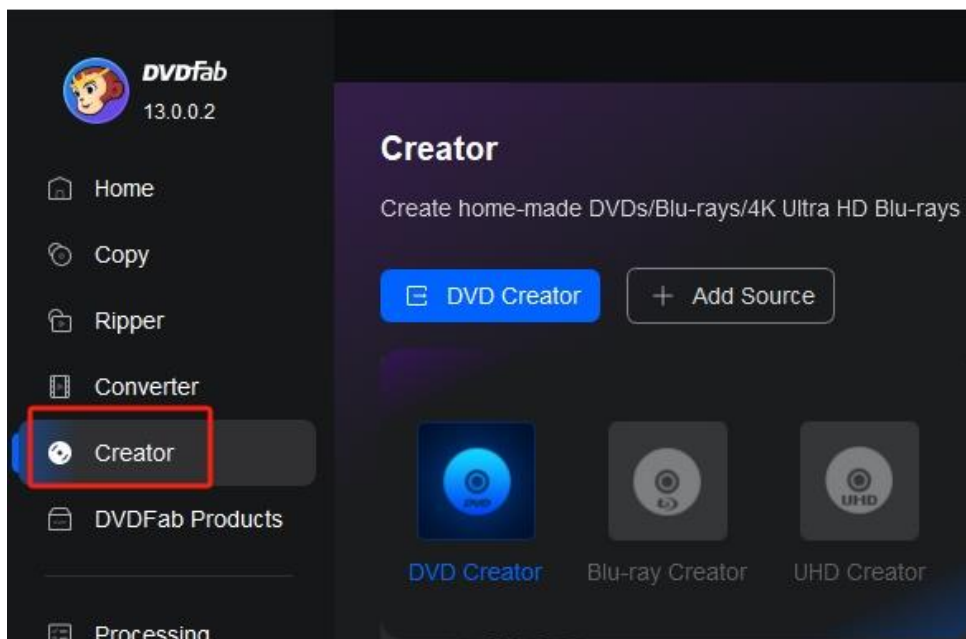

When everything is set right, click the Start button to begin the conversion process. You have the option to cancel the task anytime during the process, and you can also set your PC to automatically shut down, exit program, hibernate or do nothing when the task is done.

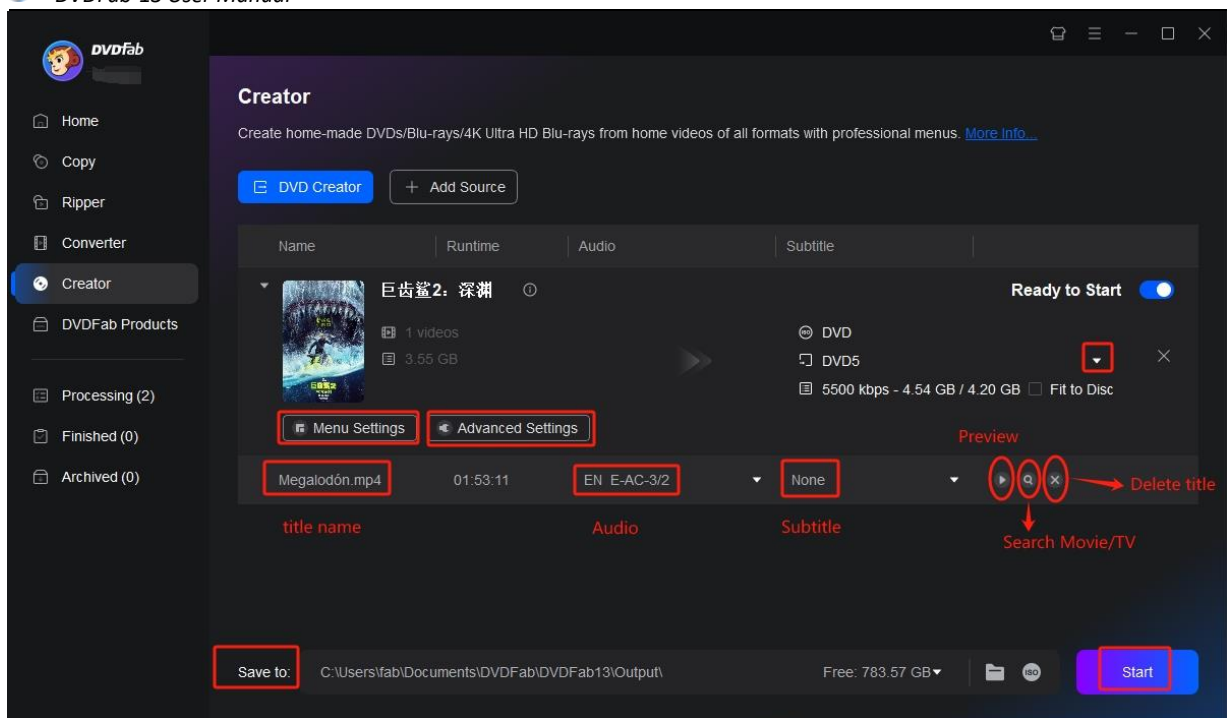

6.3 Creator Mode

6.3.1 Introduction of Creator Mode

There is also **Mode Switcher** same as Copy mode. You can switch to use DVD Creator, Blu-ray Creator and UHD Creator. You can create DVD disc/ISO/folder from any popular video format and make your own DVD/BD menu via stylish templates & customized options.

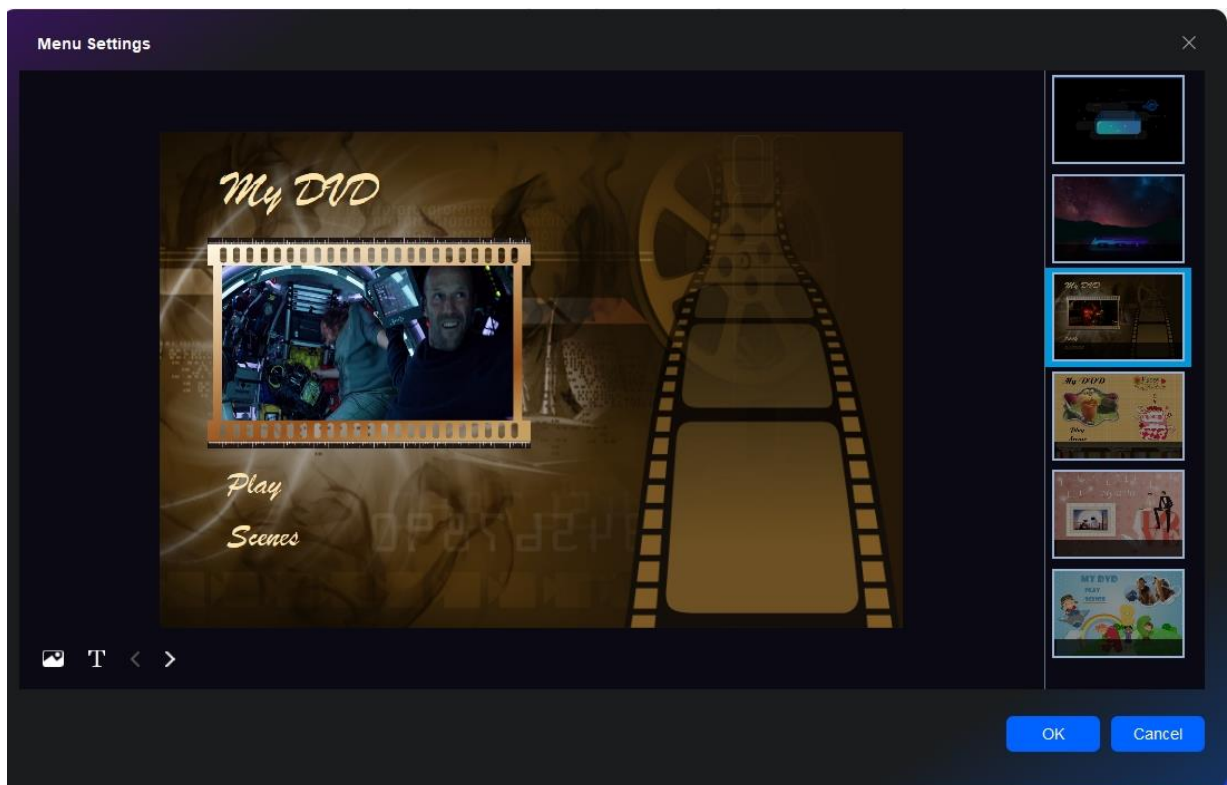

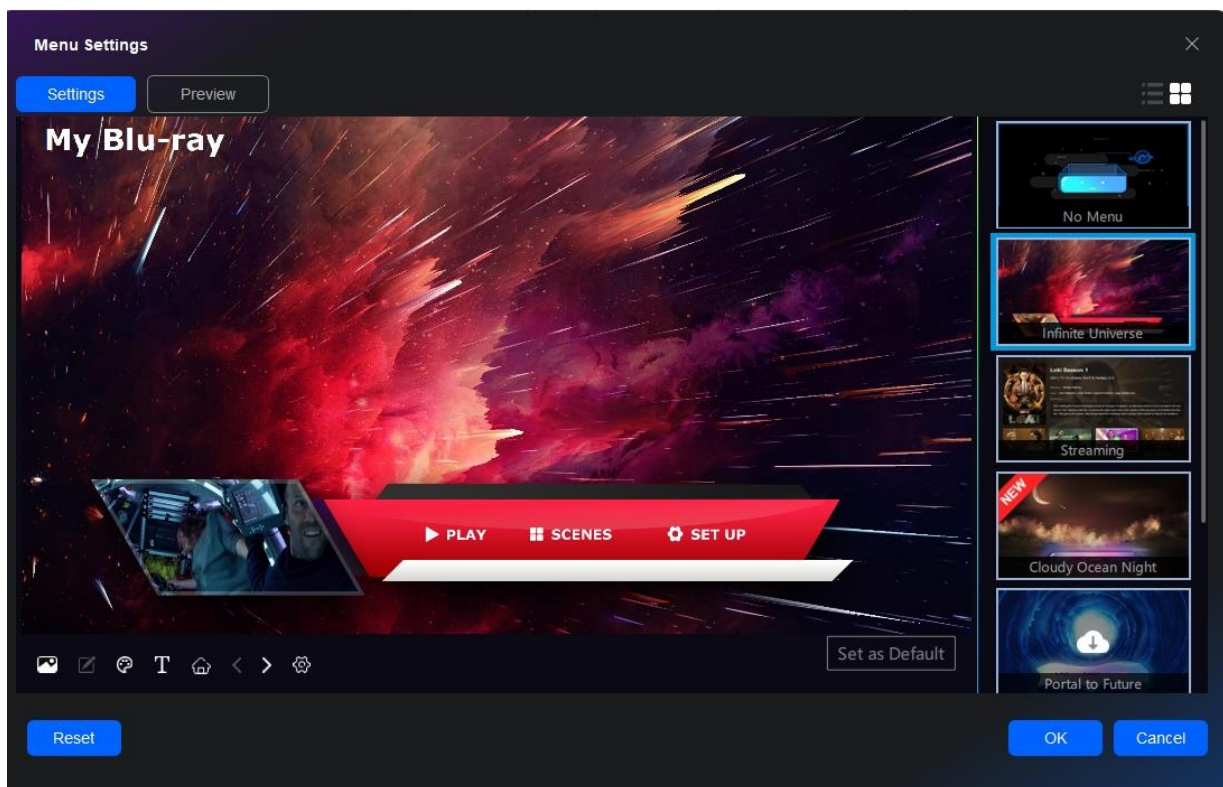

In Creator mode, you may also rename the title, set the **Audio**, **Subtitle**, **Advanced Settings**, **Menu Settings**, **Preview** the file, also **Search Movie/TV**, **Delete title** and **Save to** different path per your need.

As for Menu Settings, it can be supported by DVD Creator and Blu-ray Creator.

Here in DVD Creator

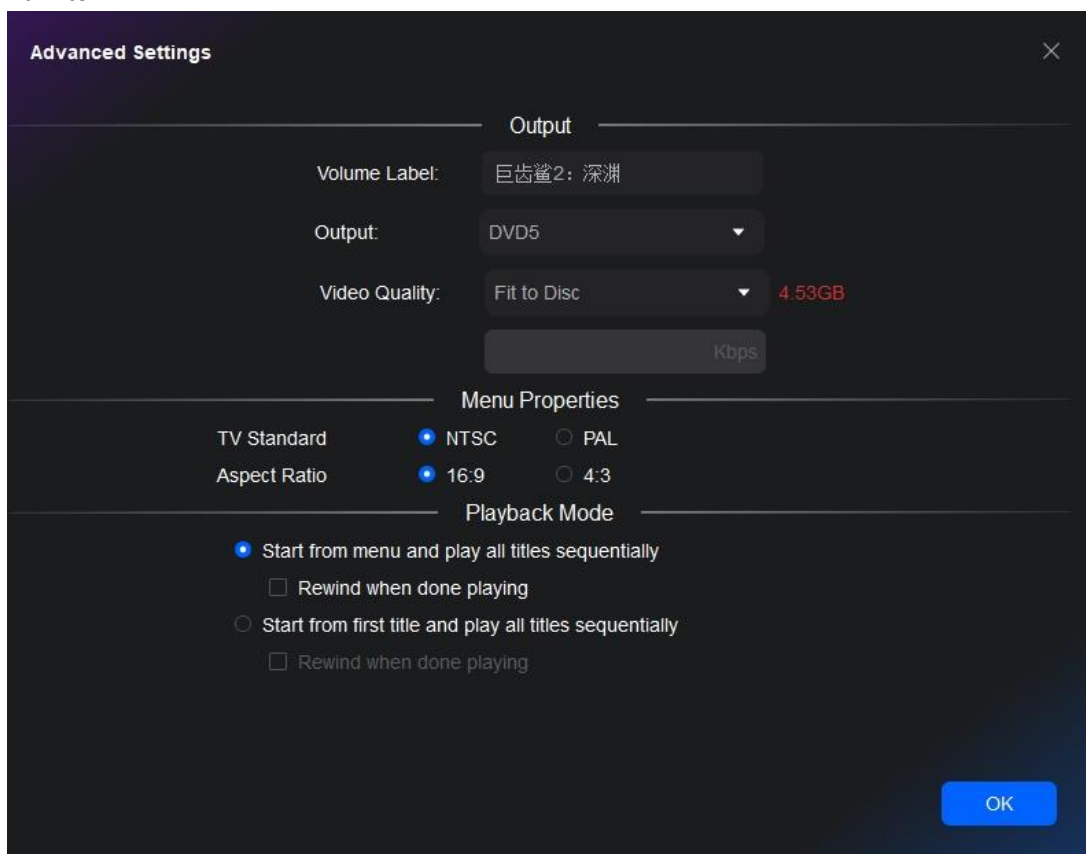

Here is Blu-ray Creator

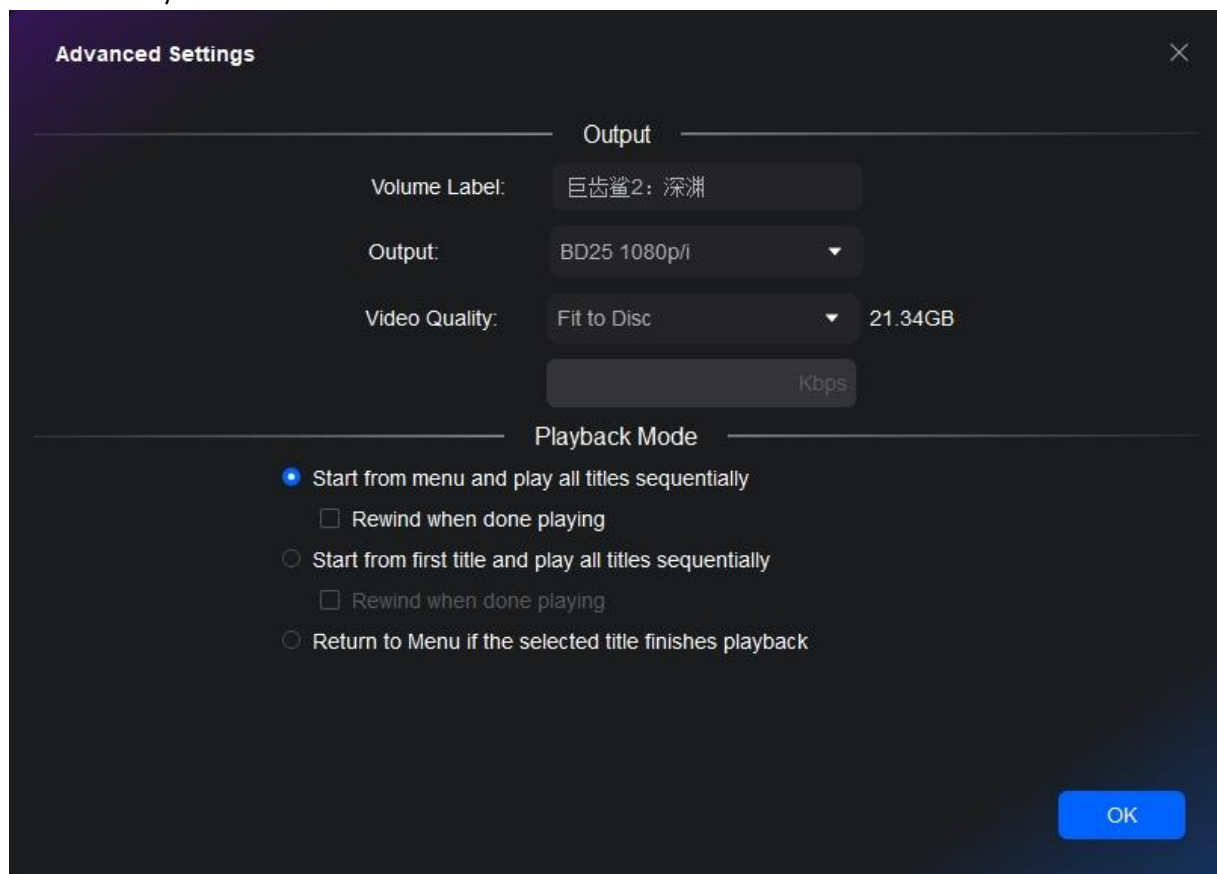

Advanced Settings in Creator tools, it has the following settings as shown below:

Burn to DVD:

Burn to Blu-ray:

Burn to UHD:

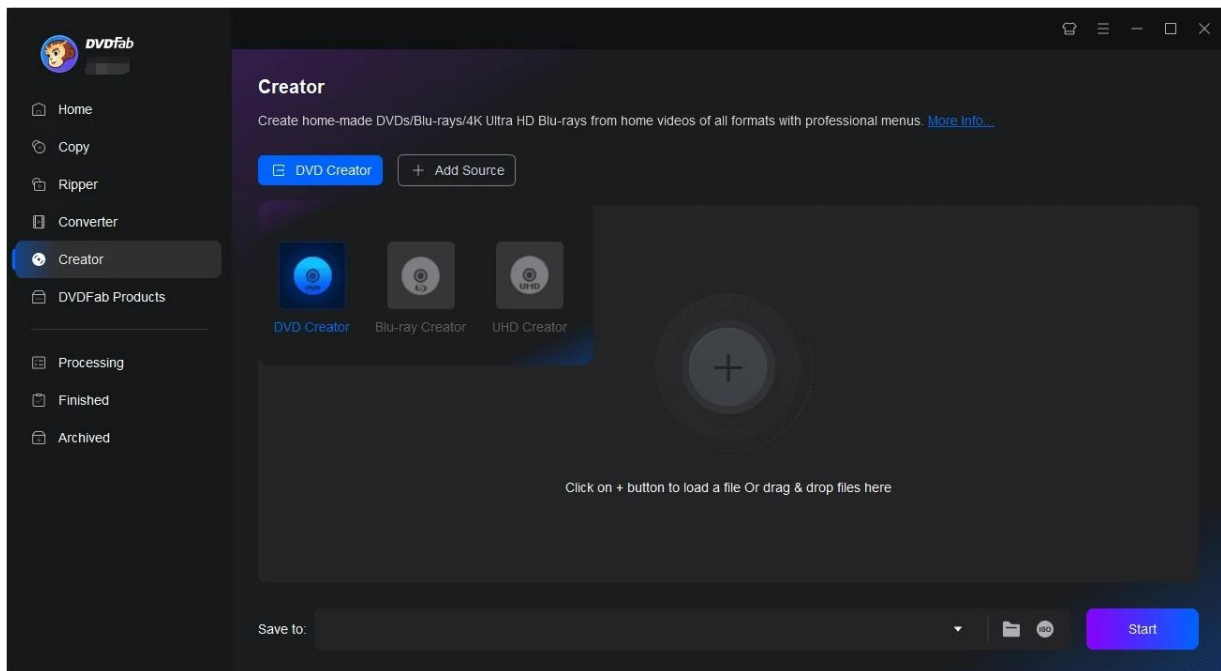

6.3.2 How to use the products in Creator Mode

6.3.2.1 How to use DVD Creator

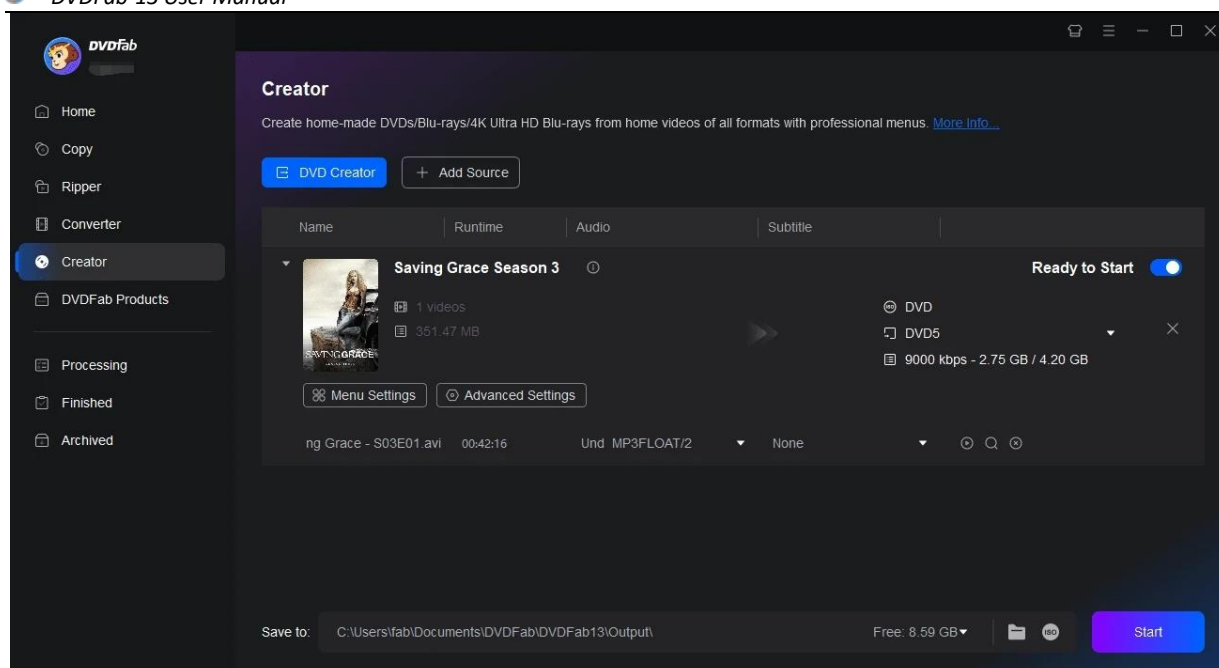

Step 1: Launch DVDFab and load the source videos.

Run DVDFab 13 and select the Creator > DVD Creator module. Load your video with the Add button on the main page or by simply dragging and dropping the file onto the main page.

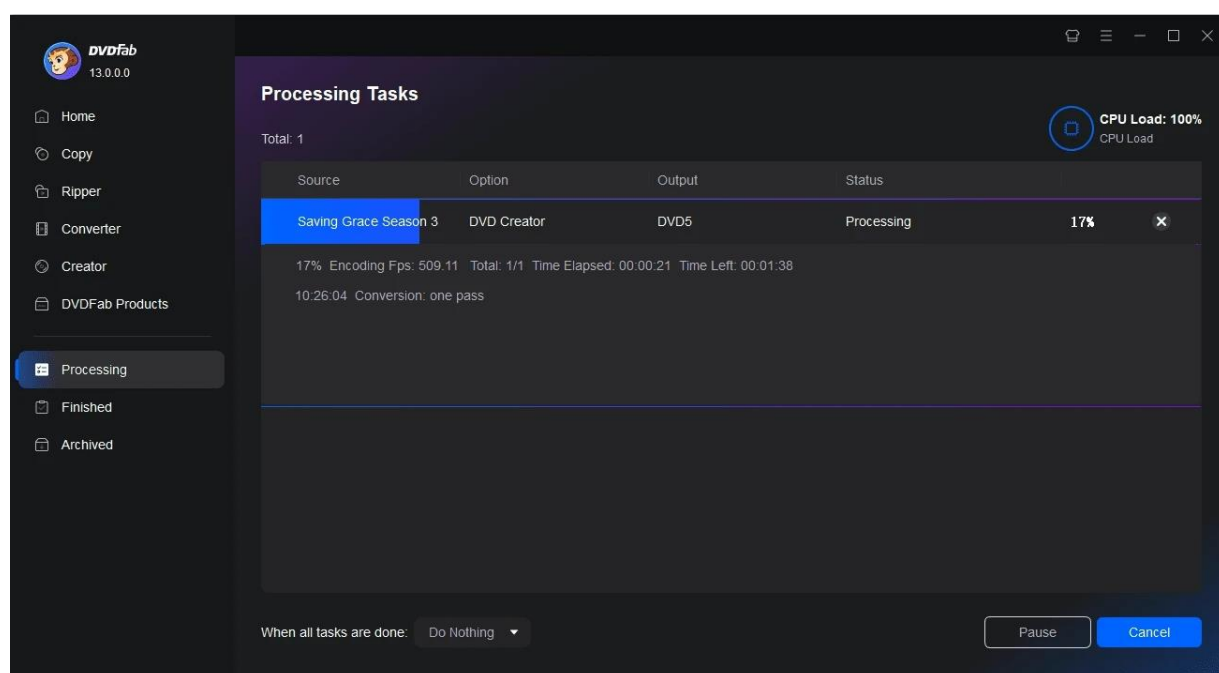

Step 2: Customize your DVD and create a DVD menu.

After loading the source video, click Advanced Settings and choose the output size and quality you prefer. You can also click Menu Settings to select and customize your menu.

Step 3: Start burning DVDs for free and fast.

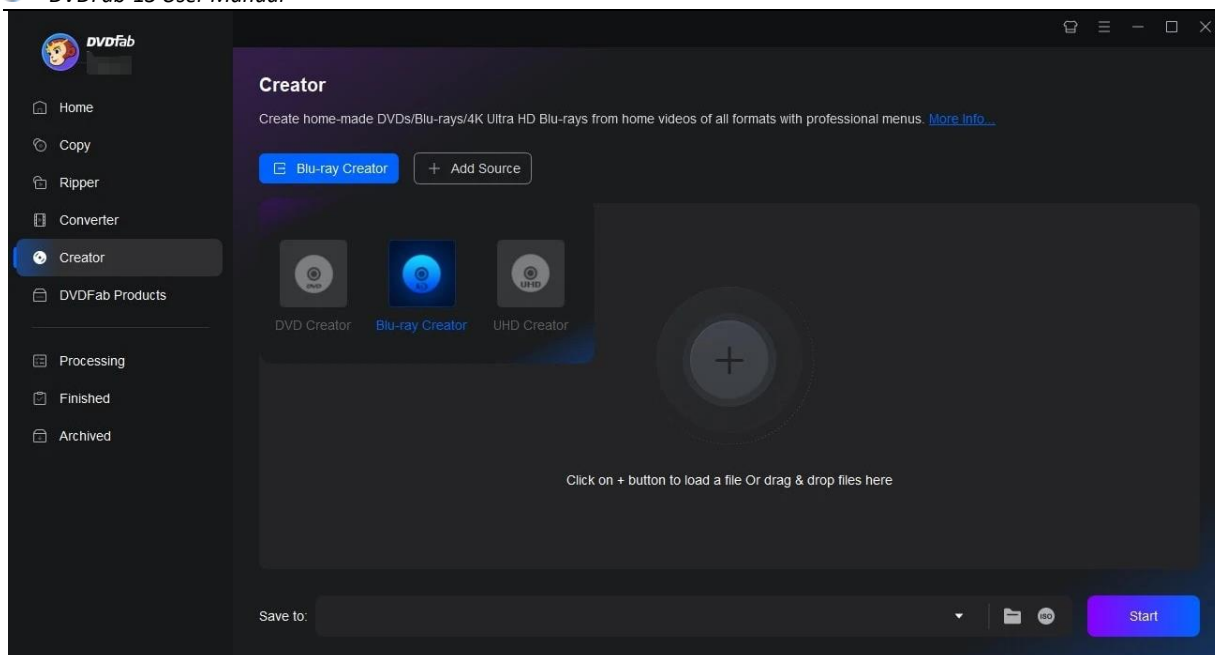

Select the output directory in Save to Part, and click the Start button to begin creating your DVD. This DVD Creator will provide detailed progress information throughout the process.

6.3.2.2 How to use Blu-ray Creator

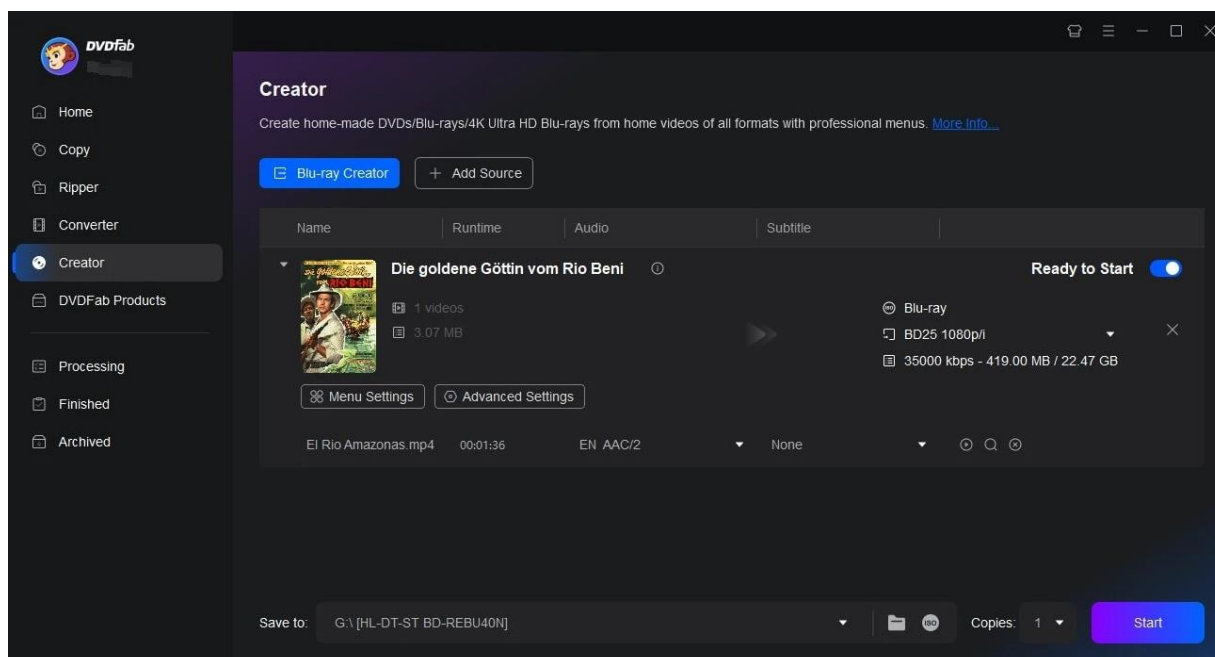

Step 1: Launch DVDFab Blu-ray Creator software and load the source

Double-click DVDFab 13 and opt for Creator module when it runs. Click the creator mode switcher to choose Blu-ray Creator. Drag & drop or '+Add' the source video(s) onto the main UI.

Step 2: Customize your Blu-ray with built-in templates

Click the wrench icon (Advanced Settings) to choose output size and quality, and the Set Menu icon (Menu Setting) to customize Blu-ray menu from the given templates.

Step 3: The last one click to burn Blu-ray easily

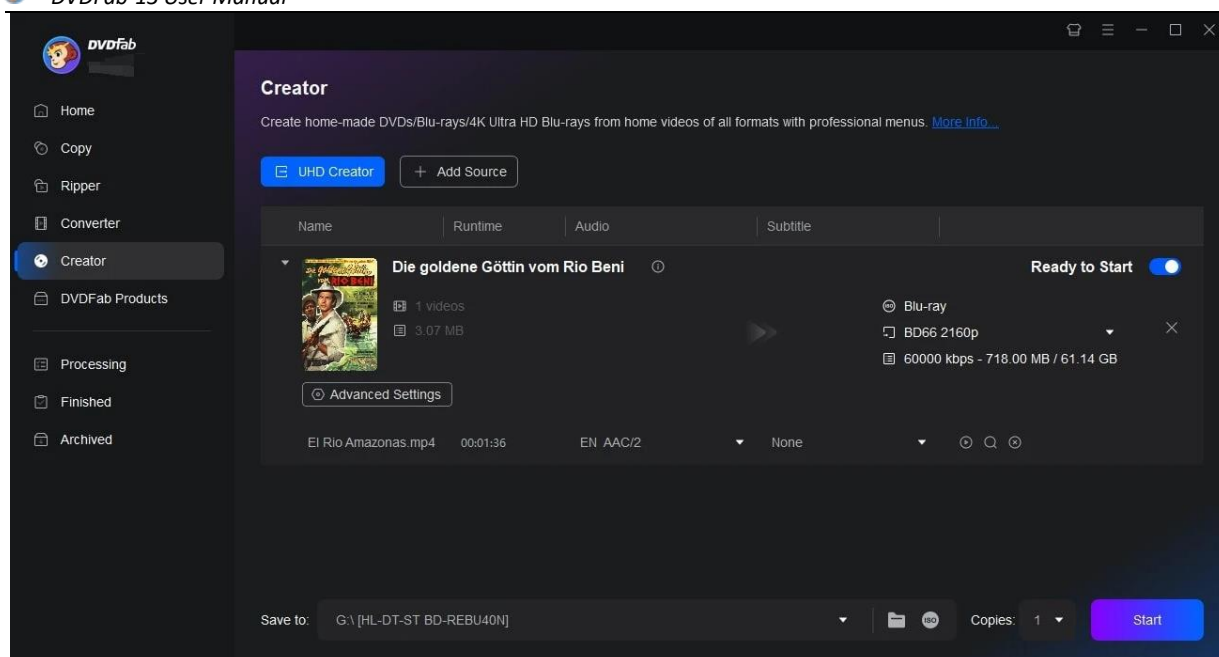

After selecting output directory from the Save to option, click Start to create Blu-ray from videos. You can see the detailed progress info during the Blu-ray burning process. For more info, click

For more knowledge about burning Blu-ray, please click [Burn Anything \(MP4, MKV, AVI, DVD, Blu-ray, etc.\) to Blu-ray Discs.](#)

Step 1: Download and install the 64-bit version of DVDFab 13

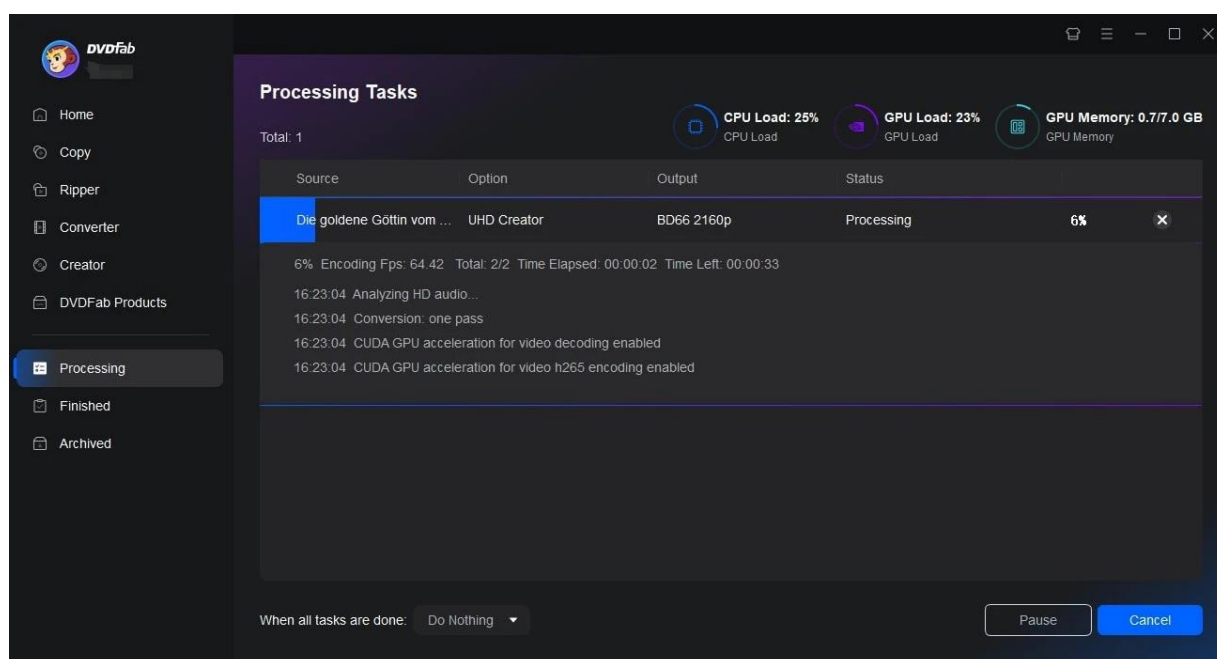

The screenshot shows the DVDfab Creator application window. On the left is a dark sidebar with a menu: Home, Copy, Ripper, Converter, Creator (highlighted with a blue bar and a play icon), DVDfab Products, Processing, Finished, and Archived. The main area has a title bar with standard window controls. Below the title bar, the word 'Creator' is displayed. A subtitle reads: 'Create home-made DVDs/Blu-rays/4K Ultra HD Blu-rays from home videos of all formats with professional menus. [More info...](#)'. There are two buttons: 'UHD Creator' (highlighted in blue) and '+ Add Source'. Below these are three icons: 'DVD Creator', 'Blu-ray Creator', and 'UHD Creator' (highlighted in blue). The central workspace features a large circular area with a plus sign in the center. Below this area, text says: 'Click on + button to load a file Or drag & drop files here'. At the bottom, there is a 'Save to:' label, a file explorer icon, a folder icon, and a 'Start' button (highlighted in blue).

Launch DVDFab 13, navigate to the UHD Creator. Then drag & drop the videos with or without HDR10/Dolby Vision contents into the main interface.

Step 3: Start the authoring procedure

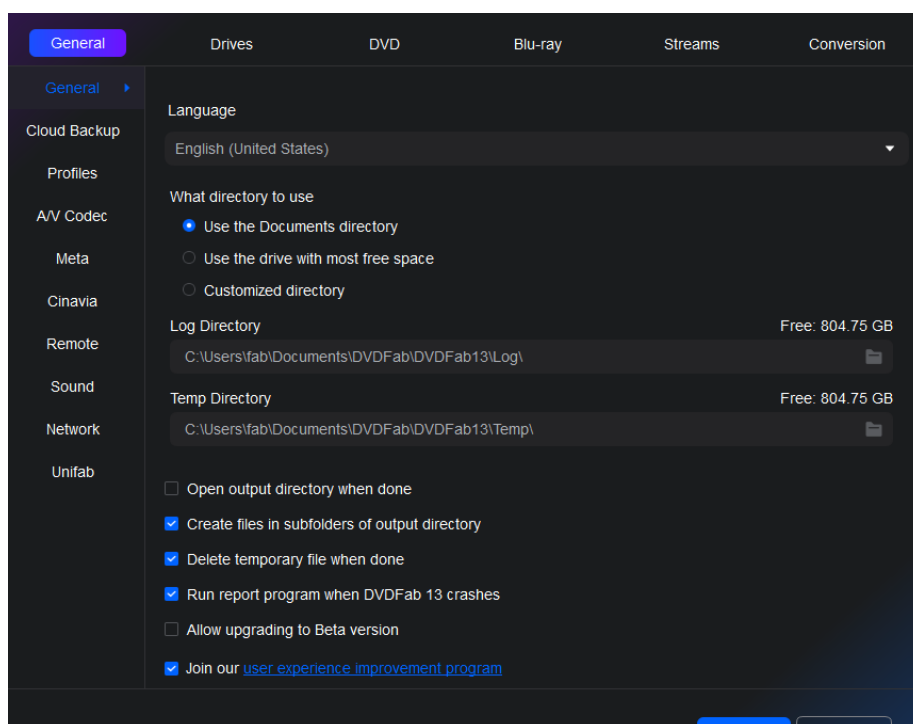

After loading the source videos, select an output destination and then hit the Start button to trigger the processing procedure.

7. Common Settings

To open the Common Settings window, you need to click the **Help** Button with the inverse triangle icon available at the top right corner of Main Interface.

7.1 General

A lot of basic settings can be preset here.

7.1.1 General

Language: Choose the language you use or are familiar with to be the display language.

What directory to use: Use the Documents directory, use the drive with most free space, customized directory.

Log Directory: the default location for the DVD Fab 13 log file is:

C:\Users\xxx\Documents\DVD Fab\DVD Fab13\Log\

Temp Directory: the default location for the DVD Fab 13 log file is:

C:\Users\xxx\Documents\DVD Fab\DVD Fab13\Temp\

Open output directory when done: Automatically open the containing folder where results are located after the tasks are finished.

Create files in subfolders of output directory: Automatically create a subfolder containing the output file in the output directory when the task is done.

Delete temporary directory when done: The place where DVD Fab saves the temp files during each task if you check this open, the file will be deleted automatically.

Run report program when DVD Fab 13 crash: The report can be better check the crash problem.

Allow upgrading to Beta version: this feature will make Beta versions available to you.

Join our user experience improvement program: You determine whether to enable this option or not. But DVD Fab is always open to suggestions, feedbacks and advices to make our software better.

Shut down the main interface: Upon this action, you can let the program minimize to system tray or exit itself or ask me before exiting or minimizing program.

CPU cores running for DVD Fab 13: You can configure your CPU cores to run for DVD Fab, which can be set up to 4 cores.

Move program icon to systray when minimizing the main surface: You can choose to move program icon to system tray or not when you minimize it.

Add Auto-play handler(Optionally, start DVD Fab 13 when DVD/Blu-ray Disc inserted): Enable this feature, DVD Fab 13 will auto start itself and access the disc whenever you insert a disc in your disc tray.

Add context menu to open video source by DVD Fab 13: This option will make DVD Fab appear in the context menu when you right click on the video file on your local disk.

Allow running multiple instances of DVD Fab 13: Literally, this means, by enabling this option, more than one threads of DVD Fab can be run simultaneously.

Prevent standby/hibernation/screen saver when processing: This means when you are during a task, system will prevent itself from switching into power saving and sleep mode, at the same time, screen saver ceases to work, too.

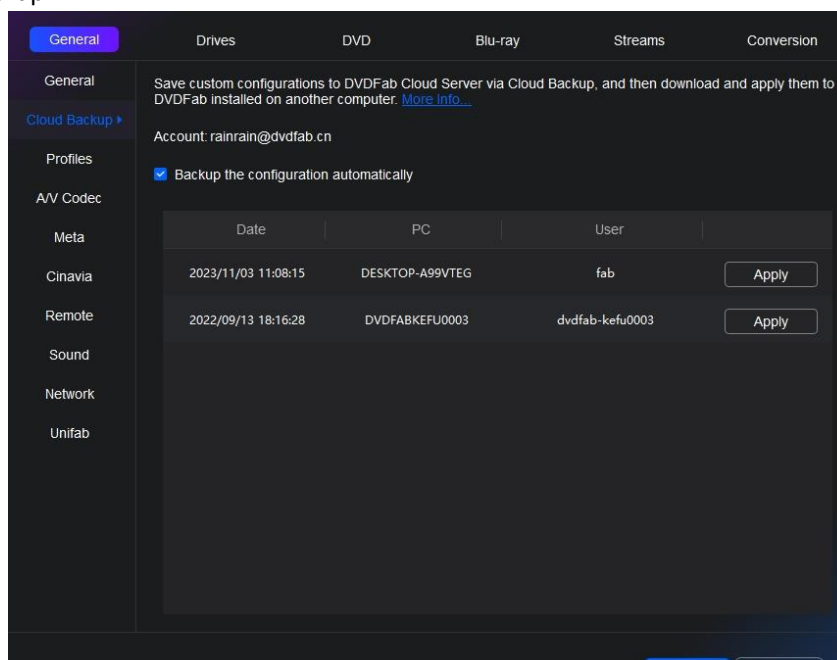

Check for on-the-fly decrypter automatically: DVD Fab will auto-detect the other decrypting software's possibly running on background and will alert users to close them for more reliable performances of DVD Fab.

Check for DMA automatically: When this option is active, DVD Fab will auto-check if your system is in DMA mode, if not, which means PIO transfer mode is enabled, there will be a pop-up window with a button allowing you to assert DMA mode for optical drives and hard discs.

'Reset DMA' button right behind allows users to check DMA status at other times instead of upon startup, e.g. system will probably switch to PIO mode especially after dealing with a dirty or scratched disc, which can be noticed by the obvious slowdown in reading/writing speed. At this point, you can click this button

and then reboot your PC to make sure DMA mode is enabled.

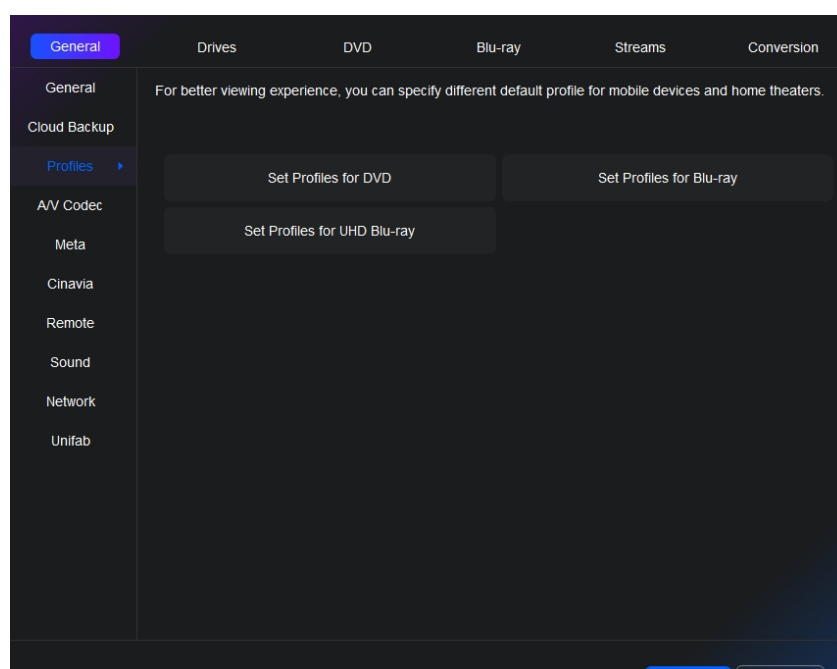

7.1.2 Cloud Backup

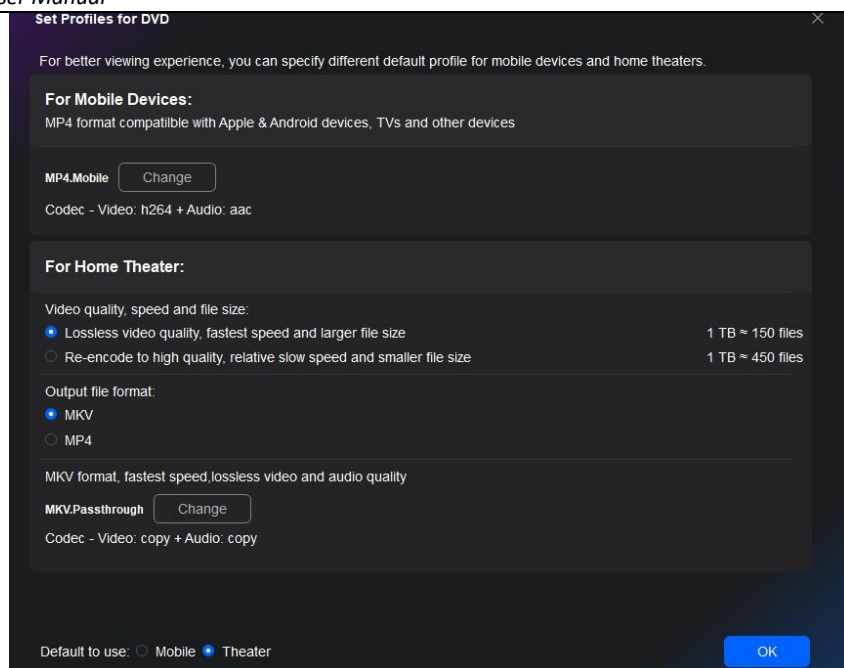

Cloud Backup saves all your configuration settings to the cloud, so that you can quickly recover them from the cloud when you install DVD Fab products on another computer.

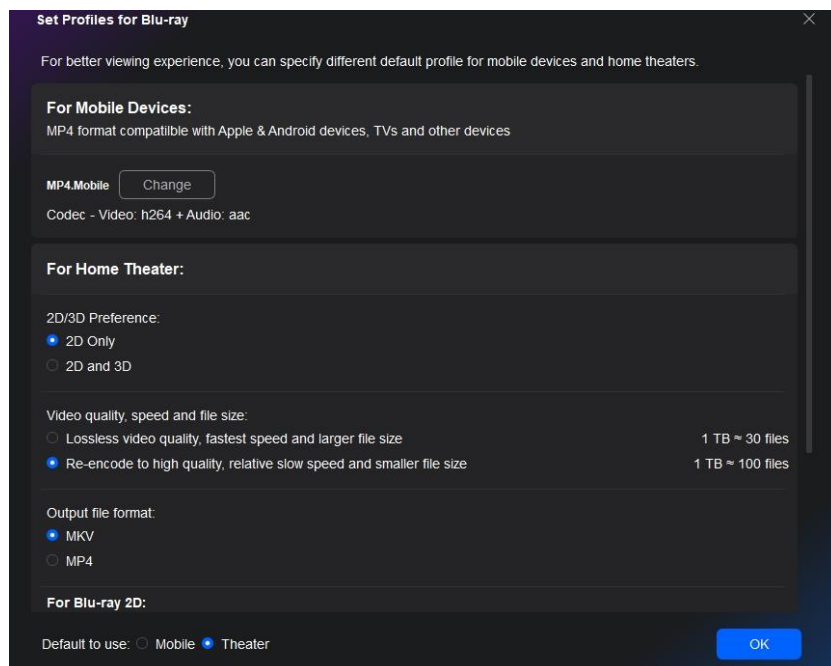

7.1.3 Profiles

For better viewing experience, you can specify different default profile for mobile device and home theater, you can set the video quality, speed and file size, output format, etc.

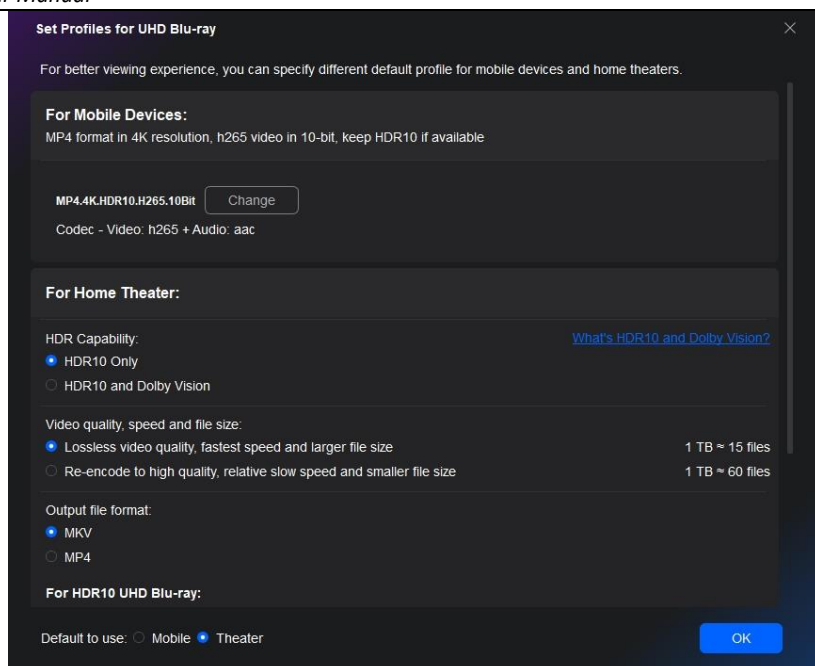

(Set Profiles for DVD)

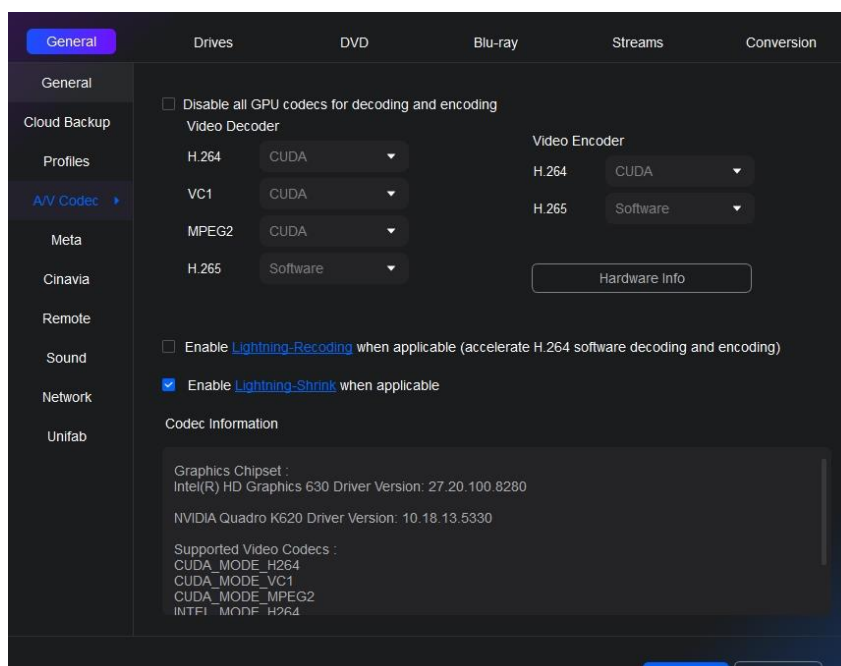

(Set Profiles for Blu-ray)

(Set Profiles for UHD Blu-ray)

7.1.4 A/V Codec

Settings on this page refer to the applied video decoder and encoder per different sources (H.264/VC1/MPEG2).

Disable all GPU codes for decoding and encoding: If your computer is powerful enough, you can disable all the GPU codec's to pursue a most dependable processing.

Video Decoder: Currently, there are Software, CUDA, DXVA, AMD APP, Intel Quick Sync and Core AVC available for H.264 source; Software, CUDA, DXVA, AMD APP, and Intel Quick Sync available for VC1 and

MPEG2 source; only Software, CUDA and Intel Quick Sync are available now for the H.265 video sources. Video Encoder: A program which uses pre-defined algorithms to encode, or compress audio or video data for storage or transmission use. Currently, Software, CUDA and Intel Quick Sync are available both on H.264 and H.265 video sources.

Hardware Info: DVDFab can analyze your computer hardware information and give you a very clear idea about what your computer is capable of as far as hardware acceleration is concerned.

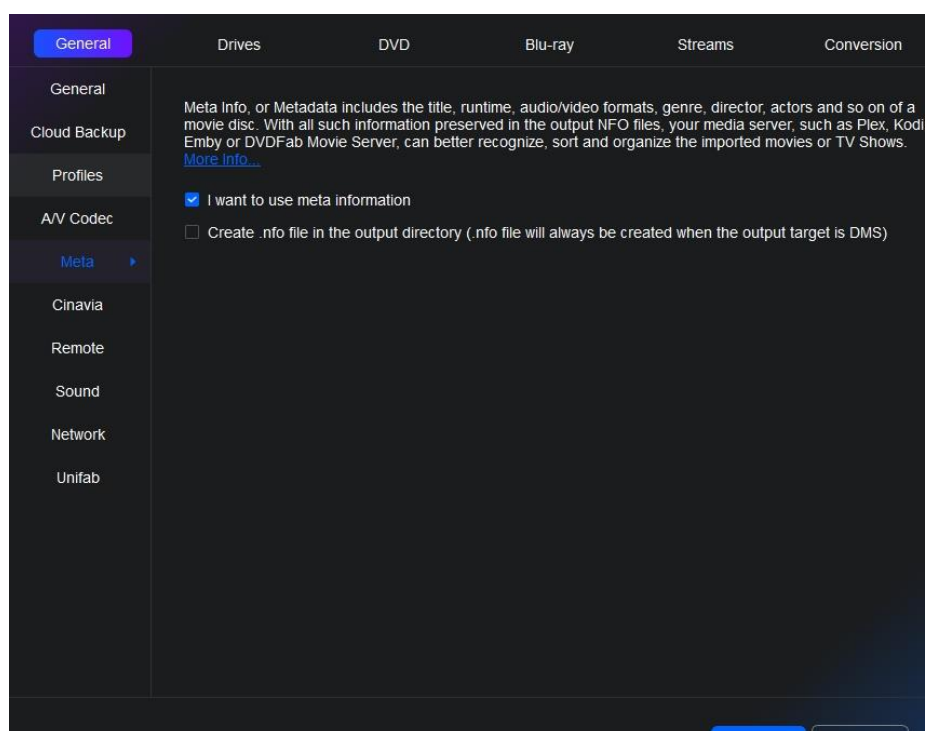

Enable [Lightning-Recoding](#) when applicable (accelerate H.264 software decoding and encoding): Lightning-Recoding is a homebrew technology by DVDFab applied in Blu-ray Copy Full Disc and Main Movie mode to considerably enhance the converting speed when it comes to compress H264 video.

Note: GPU acceleration and Lightning-Recoding are not expected to be applied simultaneously.

Enable [Lightning-Shrink](#) when applicable: DVDFab Lightning-Shrink takes the advantages of NVIDIA's CUDA hardware acceleration or Intel Quick Sync, to significantly cut down the time you spend on ripping or converting Blu-ray movies, shockingly to be within an hour.

Codec Information: Here shows the capability of your Graphic Chipset and supported video codec's of your system.

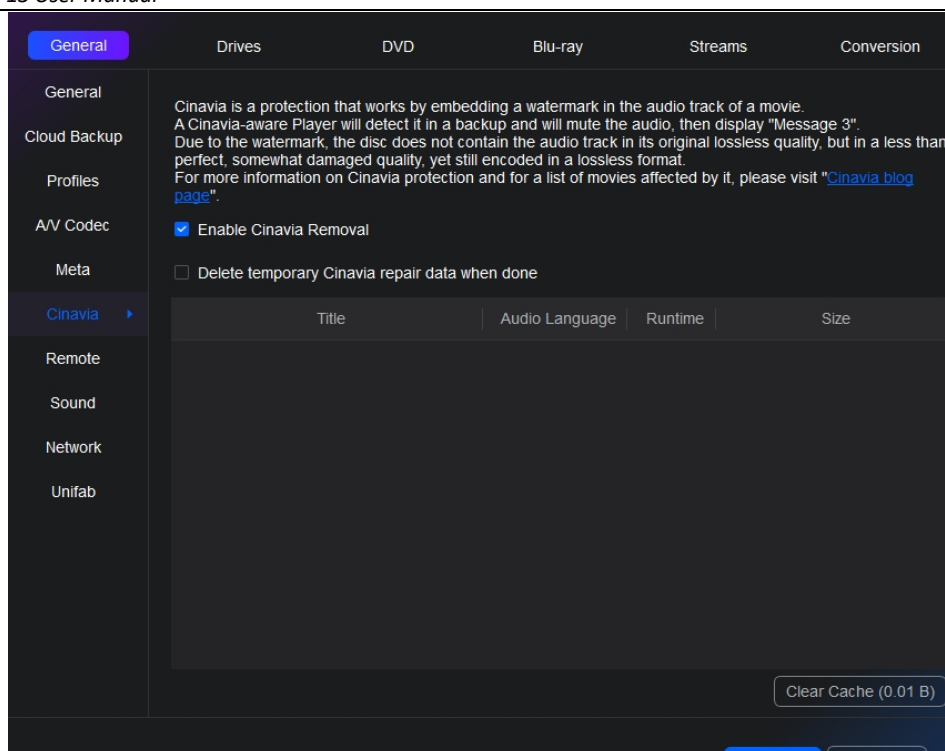

7.1.5 Meta

Meta Info is a brand-new feature introduced in two of the DVDFab Blu-ray related products, Blu-ray Copy and Blu-ray Ripper, to be more specific. The primary goal of this feature is to gather all the Meta information of Blu-ray discs, including title, chapter, runtime, audio, subtitle, etc., which can be achieved by DVDFab customers manually editing and uploading via the DVDFab client.

If users want to become a Meta Info contributor, they will need to check the two options here.

7.1.6 Cinavia

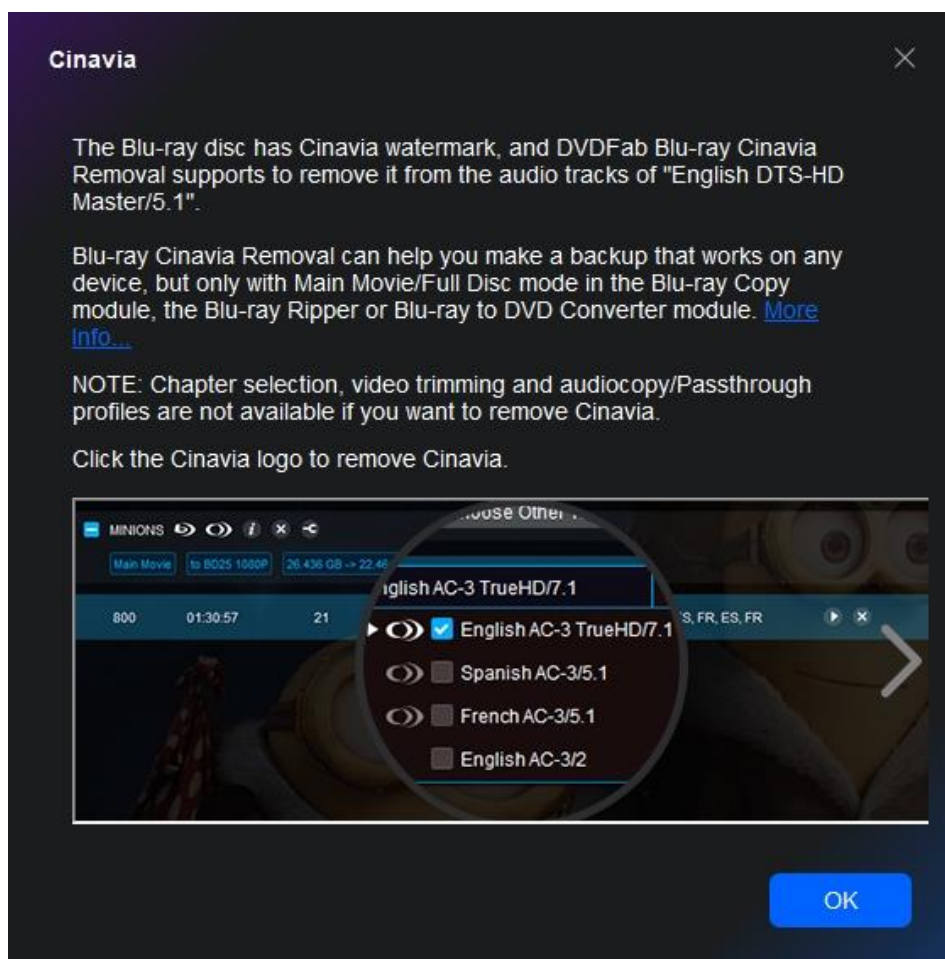

Cinavia is a protection for movies in theaters and on DVD & Blu-ray discs. It consists of a multi-level watermark that is embedded in the audio track and, while being theoretically transparent (not-audible) for the listener, it is supposed to resist various transformations of the audio stream like re-compression, analog playback & record, re-sampling, limited pitch shift, etc. The base levels are analog, but on the top level there's the watermark payload that contains some restrictions regarding the playback environment.

DVDFab has a permanent and complete Cinavia removal solution to both DVDs and Blu-rays, which is currently the best solution available on the marketplace. The solution consists of two products, DVD Cinavia Removal and Blu-ray Cinavia Removal. The former is integrated in DVD Copy the Main Movie mode for the time being, while the Blu-ray counterpart is integrated in three products, including the Blu-ray Copy, Blu-ray Ripper, and Blu-ray to DVD Converter, of which, the Blu-ray Copy only supports the Main Movie mode.

As the newly released DVD and Blu-ray titles are more likely to come with the Cinavia watermarks, the supported titles are also being constantly updated. DVDFab will take the shortest time to support a new title as soon as it is released.

Enable Cinavia Removal: to remove the Cinavia encryptions on a DVD or Blu-ray, users must first enable this feature at the Common Settings panel, otherwise, DVDFab might not be able to detect whether or not a disc is infected with Cinavia. By enabling this option, when a Cinavia infected disc is detected, DVDFab will popup an alert, the one shown as below:

Delete temporary Cinavia repair data when done: during the Cinavia removal process, DVDFab will download the repair data from DVDFab server and save it on user's hard drive. When this option is enabled, DVDFab will automatically delete that repair data. If not, the repair data will stay on user's hard drive, which could eat up the free space on that hard drive quickly.

Temporary Directory: the place where DVDFab stores the Cinavia repair data on user's hard drive. The path can be relocated, and users also can manually empty the folder to delete the repair data.

For more information: <http://blog.dvdfab.cn/cinavia-protection.html>

Checkout the supported titles here (being constantly updated):

<http://forum.dvdfab.cn/forumdisplay.php?f=66>

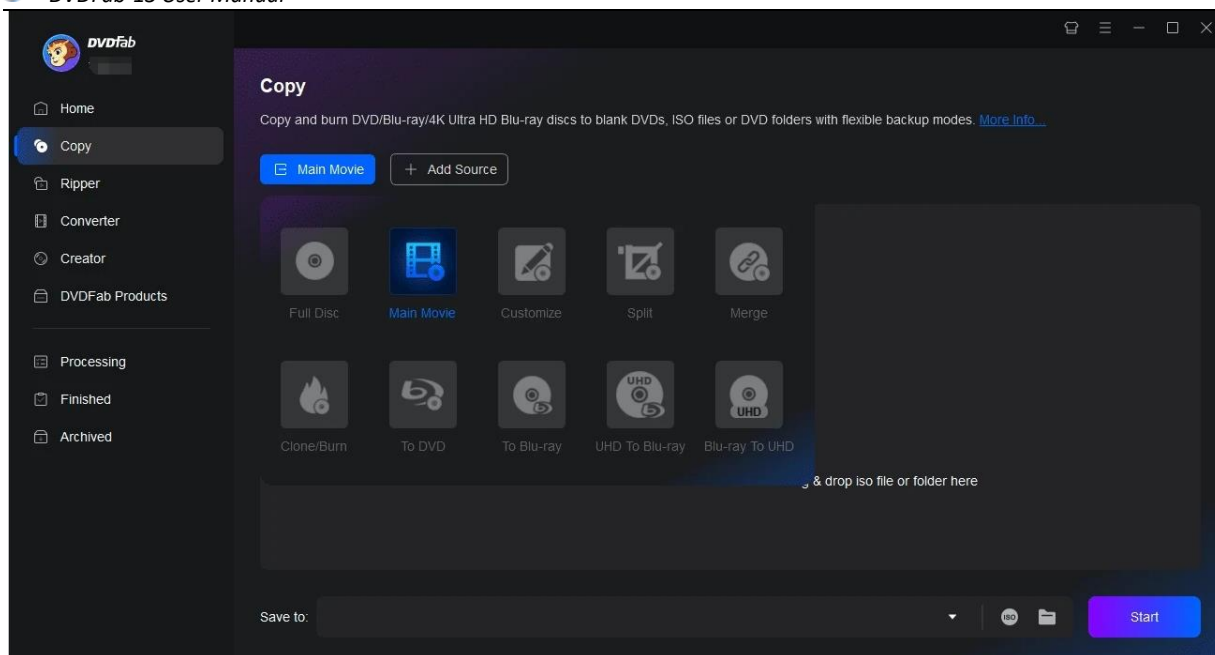

Guide of removing Cinavia on DVDs: <http://www.dvdfab.cn/dvd-cinavia-removal.htm>

Guide of removing Cinavia on Blu-rays: <http://www.dvdfab.cn/blu-ray-cinavia-removal.htm>

How to use DVD/Blu-ray/UHD Cinavia Removal, here we take Blu-ray Cinavia Removal for example

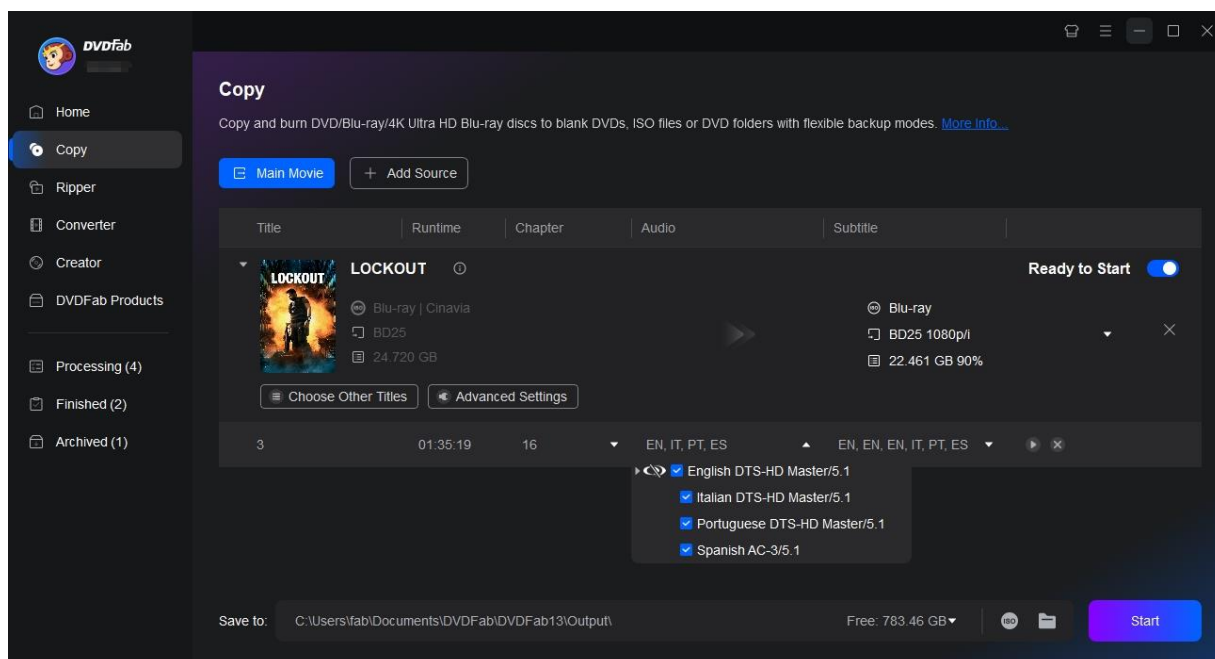

Step 1: Launch DVDFab Blu-ray Copy, and load the source Blu-ray

Launch DVDFab 13, navigate to Blu-ray Ripper, and insert the target disc into the Blu-ray drive for DVDFab to access, or simply drag and drop the source into the main UI for loading if it is an ISO file. If the disc is protected by Cinavia, a window with the message (see above) will appear.

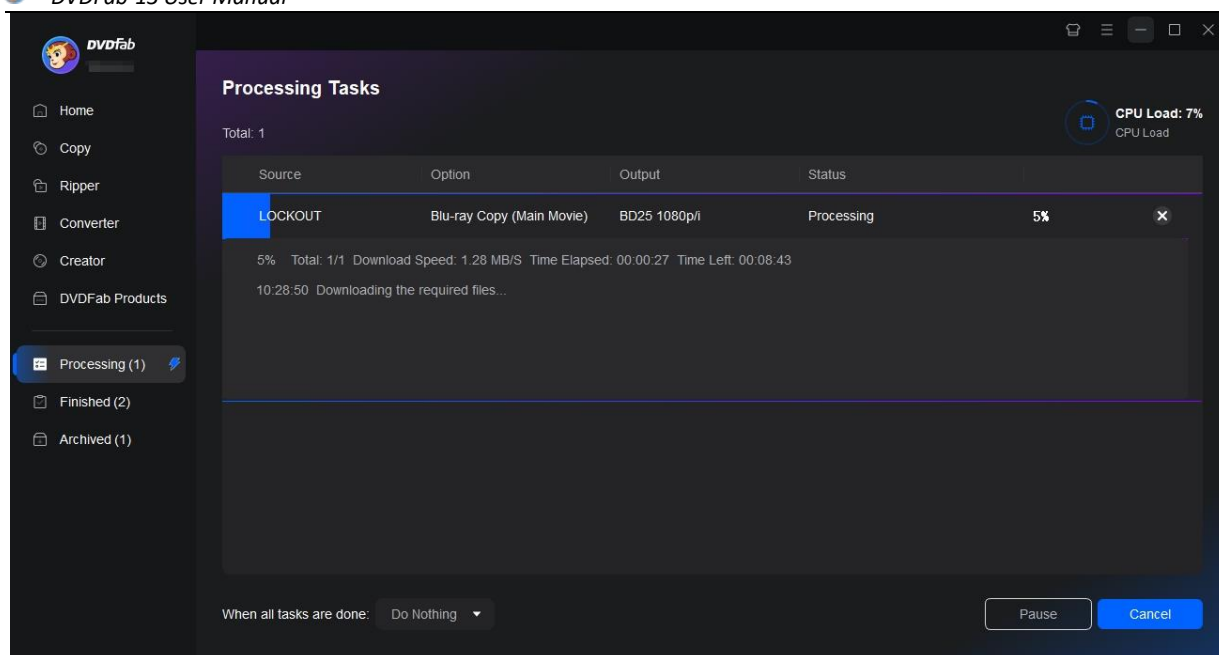

Step 2: Select the Cinavia protected audio track to remove the protections

At the Audio selection box, select the Cinavia affected audio track and at the same time click on the Cinavia logo until there is a red slash across it. Choose the output size as BD 50 or BD 25 and then choose an output path to start the backup process. If you are working with Blu-ray to DVD Converter, you could personalize the output DVD playback including the playback menu, playback mode, volume label, etc.

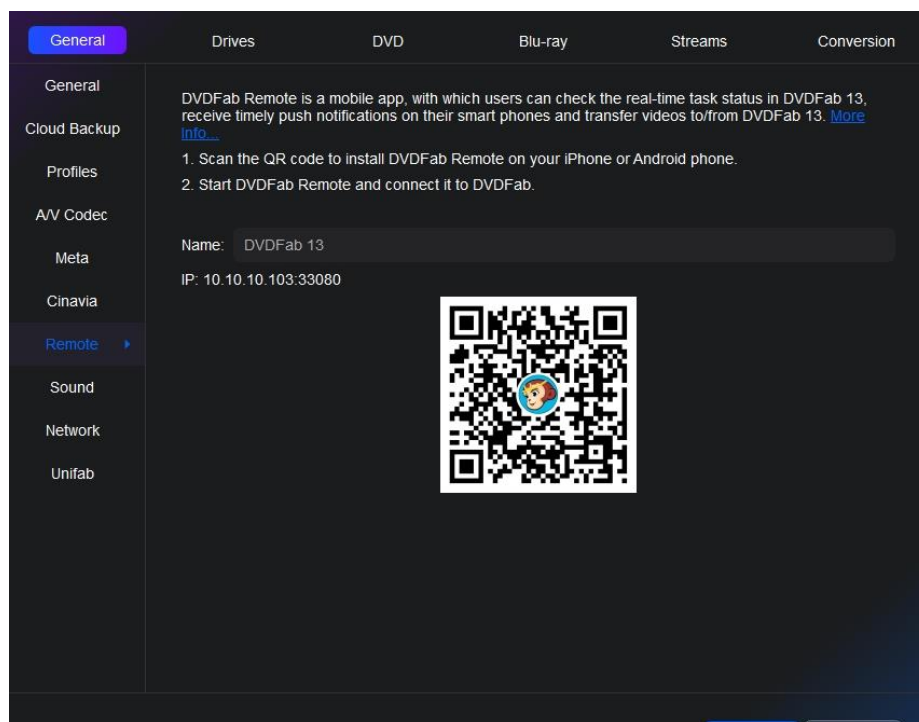

Step 3: Start Cinavia removal task

Click the Start button to send DVDFab the execution command. Once the backup is started, all you can do now is to wait. The Cinavia watermark will be completely and permanently removed from the audio track, leaving you a lossless DTS-HD audio track that equalizes the original quality on the genuine disc.

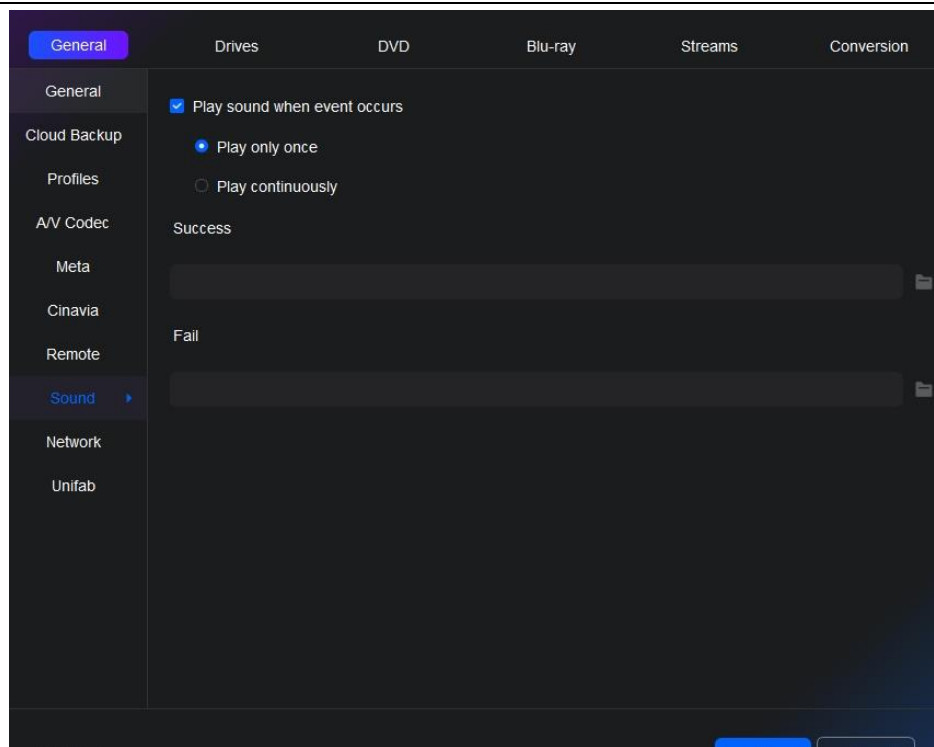

7.1.7 Remote

DVDFab Remote is a mobile application that works on both iOS and Android platforms. The idea behind this handy mobile app is to keep users timely updated with the task status information from DVDFab client if they have something else to do, while DVDFab client is doing its own job, so that they don't have to sit near the computer screen all the time and watch the task to be completed. We will talk about this mobile app further in Chapter 10.

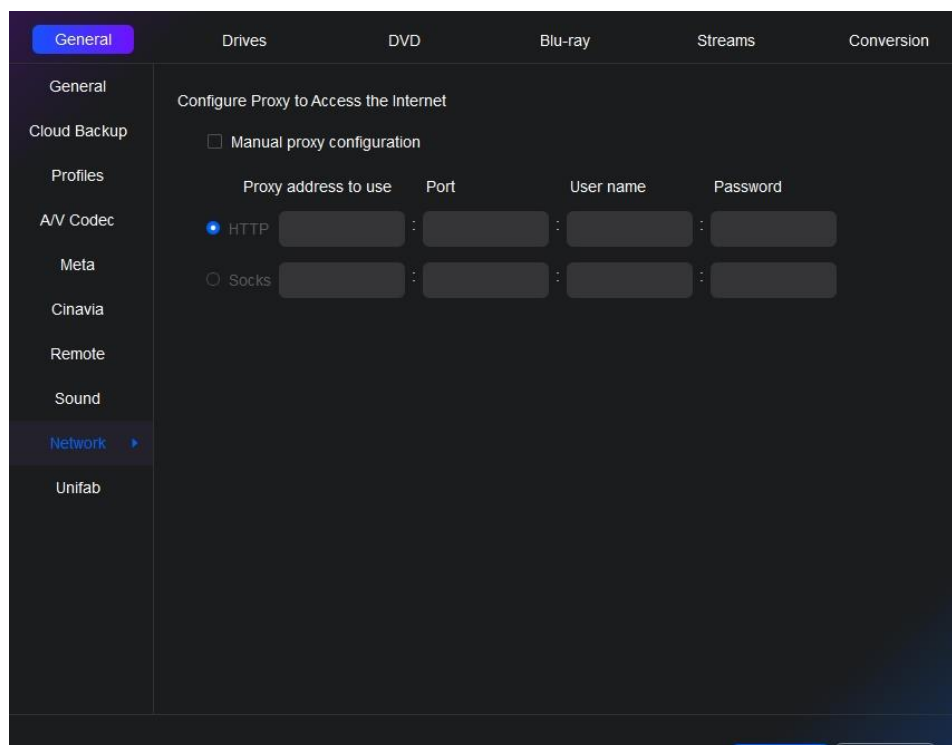

7.1.8 Sound

Choose your ideal sound for alerting when event, successor failure of a task happens.

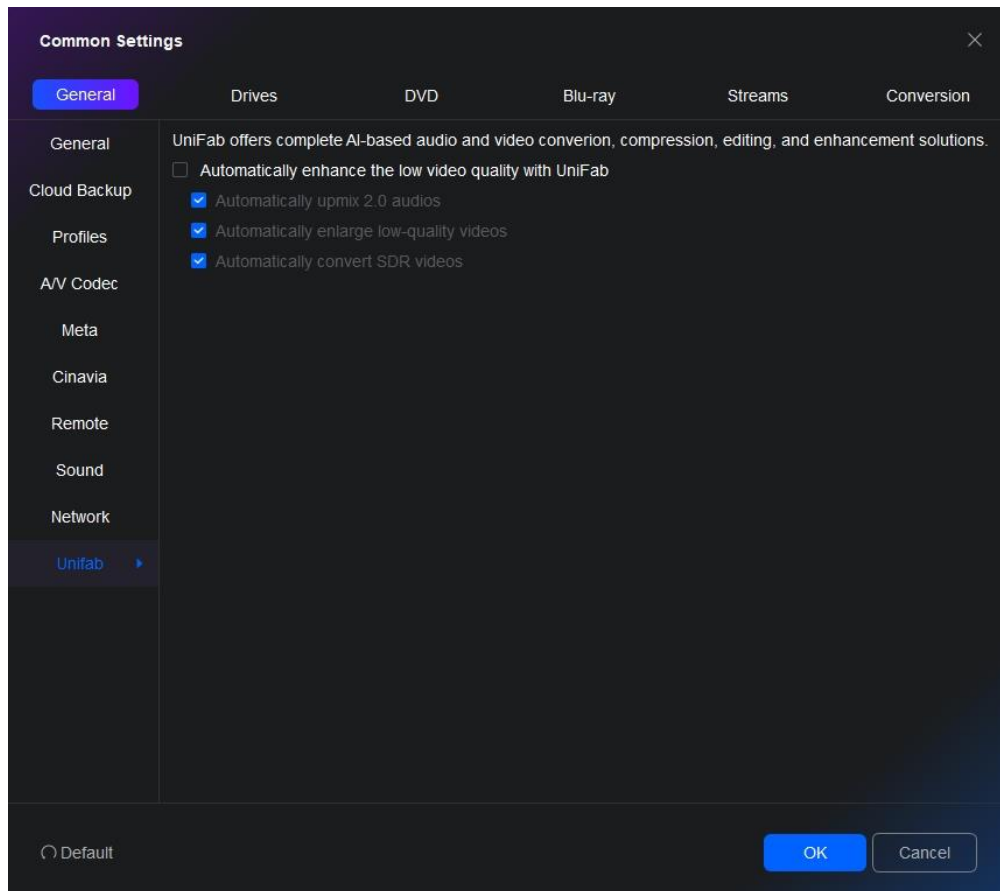

7.1.9 Network

Confirm how DVD Fab is connected to a live internet: Directly connect to internet or use your own proxy settings.

7.1.10 UniFab

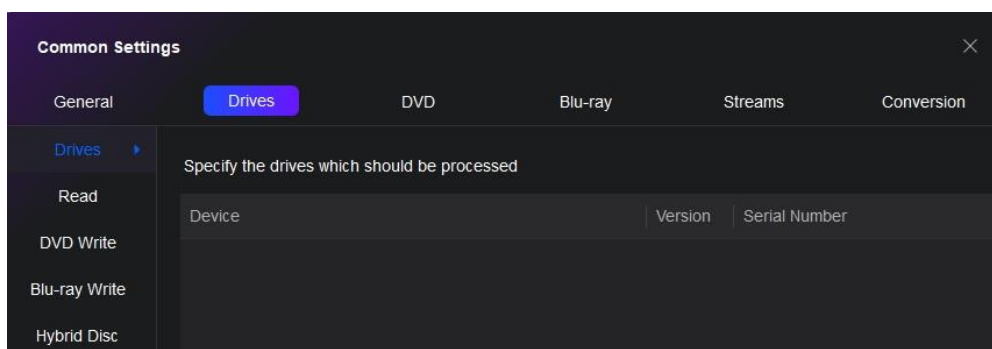

UniFab offers complete AI-based audio and video conversion, compression, editing and enhancement solutions.

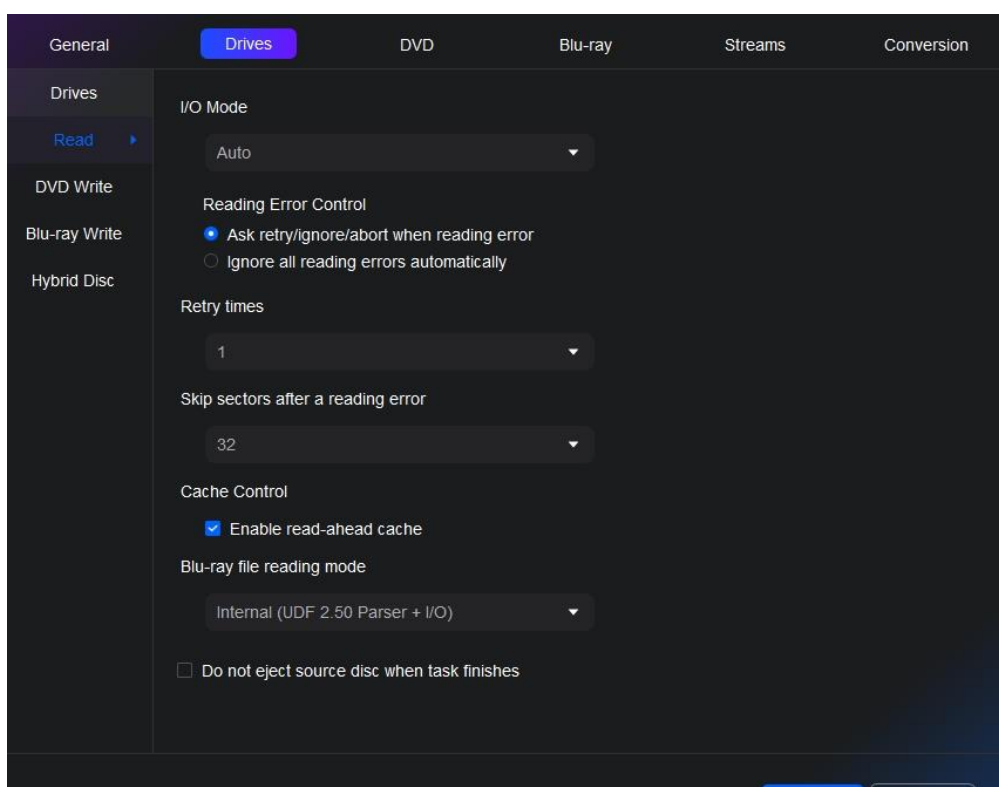

7.2 Drives

7.2.1 Drives

Specify the drives which should be processed.

7.2.2 Read

I/O Mode: Choose the mode for reading drives among AUTO, ASPI, SPTI and Passkey. To the great extent, the AUTOmode is recommended. However, when reading error occurs, you can try to switch it to the mode you need.

Reading Error Control

Ask retry/ignore/abort when reading error: Enable this option, system will pop up a window asking you how to deal with the reading error encountered.

Ignore reading errors automatically: Choose this option, system will ignore the encountered reading errors without the pop-up window mentioned above.

Retry times: Select the timestoretry to read the optical drive when reading error occurs, which can be up to 10 times.

Skip sectors after a reading error: There may be some reading errors resulted from your seriously damaged source DVD/Blu-ray disc, which couldn't be handled with. This time, you can skip the scratched sectors of the source disc, and the skipped sectors can be up to 64.

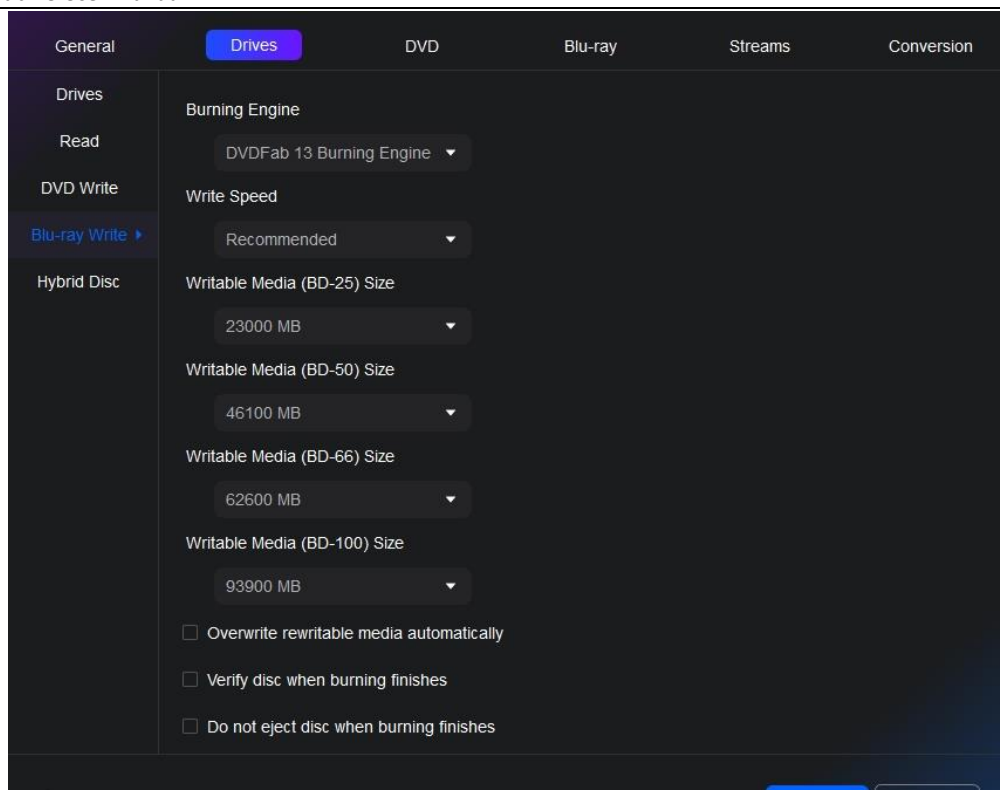

Cache Control: An optimized source reading mechanism developed by DVD Fab Software Inc, which can greatly develop the efficiency of reading drive and writing data.

Blu-ray-File Reading Mode: To avoid the inconvenience of inserting a third-party driver, an internal UDF 2.50 parser is introduced by DVD Fab Blu-ray Copy to read Blu-ray discs.

Do not eject source disc when finished copying: By default, system will eject the original disc when copying phase completes, disable it if you want to keep the source in the drive.

7.2.3 DVD/Blu-ray Write

Burning Engine: Currently, there are DVDFab Burning Engine, VSO Burning Engine, Nero Burn ROM and Imgburn available. However, Nero Burn ROM is not available as the option for Blu-ray burning engine.

Write Speed: Choose reasonable burning speed according to your write drive and blank media's capability. Keep in mind: the slower in speed, the better in quality.

DVD/Blu-ray Writable Media Size: 4300 MB for DVD-5 and 8100 MB for DVD-9 are recommended. The recommended size for BD-25 is 23000 MB, and for BD-50 size is 43000 MB. Users also can customize the size. Bear in mind: Burning too close to the disc edge might increase the potential of playback issue.

Write type of DVD-R Media: Three options are available: Auto, SAO writing and Packet writing. Choose Auto, the engine determines how to write the data to the output media; Choose SAO(Session-at-once) writing, the burning engine will copy only one sector of a source once and take possession of 13MB of memory for the coupling information; Choose Packet writing, the engine will burn the entire source disc once for all, which is faster, more effective, and also of high space utilization compared to SAO writing.

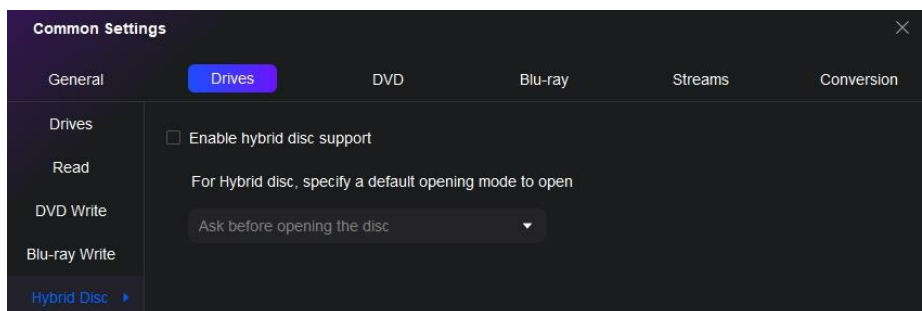

Overwrite rewritable media automatically: Check this option to allow system overwrites the rewritable media automatically.

Verify disc when burning finishes: This additional feature serves as a checksum whether or not the disc is burnt properly.

Do not eject source disc when finished copying: By default, system will eject the original disc when copying phase completes, disable it if you want to keep the source in the drive.

Set booktype to DVD-ROM (only for DVD+R/RW media): Some standalone players are friendlier with DVD-ROM booktype, click this option to make the resulting disc more compatible. Note that not all drives support this feature.

7.2.4 Hybrid Disc

Theoretically, a Hybrid disc could refer to:

- 1). A disc that contains both DVD-Video and DVD-Audio content or SACD content. (More accurately called a universal or AV DVD. The DVD-Audio standard allows this. The SACD standard does not officially allow video, so it's unclear what a given SACD player will do with a hybrid SACD+DVD-Video disc.) Other variations of this hybrid would be a disc with both DVD-Audio and SACD content, or a disc with all three formats.
- 2). A disc with two layers, one that can be read in DVD players and one that can be read in CD players. (More accurately called a legacy or CD-compatible disc.)
- 3). A disc containing one BD layer as well as two DVD layers, with a total capacity of 33.5 GB (25 GB + 8.5 GB). The disc follows the "Blu-ray Disc, Hybrid Format" specifications provided by the Blu-ray Disc Association. The disc has a blue laser along with two layers like ordinary DVD laser. The Blu-ray and DVD layers are separated by a semi-reflective film that reflects blue light while it allows the red light to pass through the DVD layer underneath.

Note: Only certain kind of drive can read both layers of a hybrid disc, and to play the hybrid disc requires a certain player.

DVDFab offers a solution by enabling the preset as far as hybrid disc is involved: which layer is meant to be automatically recognized by DVDFab upon inserting the disc, CD, DVD, HD-DVD or Blu-ray?

7.3 DVD

7.3.1 DVD Protection

Remove CSS, RC, RCE, APS, UOPs, structure protection:

In order to copy the DVD disc, all these different copy protection systems are to be removed.

Sidenote on UOPs (User Operation Prohibitions): A form of use restriction used on video DVD discs and Blu-ray discs. Most DVD players and Blu-ray players prohibit the viewer from performing a large majority of actions during sections of a DVD that are protected or restricted by this feature, and will display the no symbol or a message to that effect if any of these actions are attempted. It is used mainly for copyright notices or warnings, such as an FBI warning in the United States, and "protected" (i.e., "unskippable") commercials.

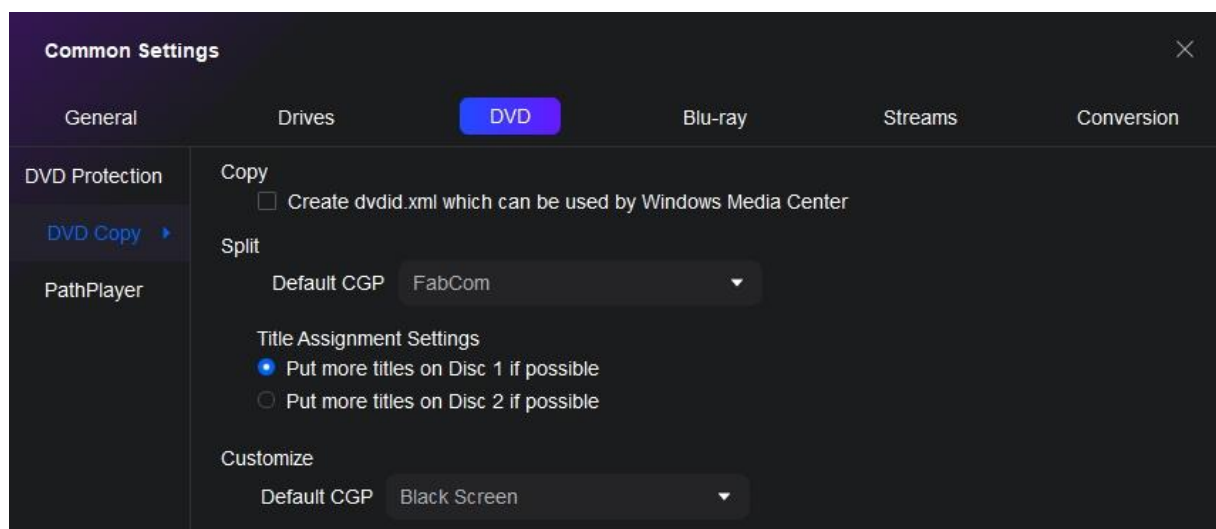

Remove RCE, specify the disc's region code: To remove the 'RCE - Region Code Enhancement', you will be required to choose the correct region code at a pop-up window. The region code usually can be found on the original DVD package.

Remove layer break: When compressing a DVD-9 size content to fit on a DVD-5 blank disc in Main Movie, Full Disc, Customize, Customize Split or Merge mode, this option is supposed to be enabled, while DVD Fab will ignore this setting and preserve the original layer break when it comes to Clone mode.

Enable Cloud Decryption Service: DVD Fab will read the decryption data stored in Cloud Decryption Service for any new protections on DVD/Blu-ray, which will greatly improve the source reading and decryption process and save users' time.

7.3.2 DVD Copy

The settings here apply to all the copy modes of DVD Copy.

Create dvid.xml that can be used by Windows Media Center: This checkbox allows the user to specify whether a small disc ID file will be written along with the output folders. The file allows other applications to automatically find cover art and other information about the title on the internet, e.g. Windows Media Center.

Title Assignment Setting: if possible, put more titles on disc 1 or disc 2 as you prefer.

Default CGP: You can choose Black Screen or FabCom to replace the titles that are not be copied.

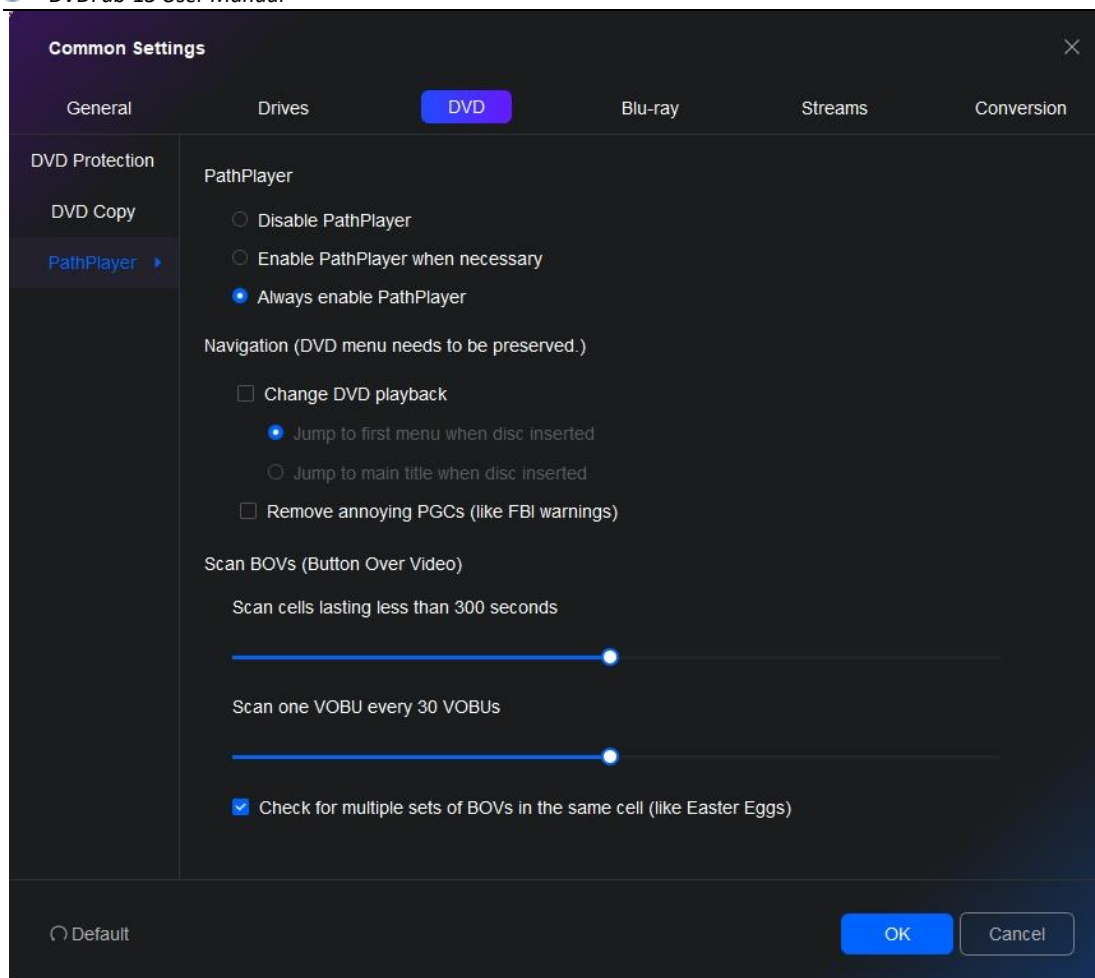

7.3.3 PathPlayer

What's PathPlayer?

PathPlayer can identify all the playable contents on a DVD disc to pave the way for a blazing fast decryption. It gives DVDFab the ability to copy DVD content only allowed to be played on a real DVD player. In this way, DVDFab will ignore unplayable content which may contain copy protections.

How PathPlayer works?

PathPlayer works like a real DVD player, it follows every play path of a DVD, checking everything that you can access on a DVD player with a remote controller. When PathPlayer finishes, DVDFab can know all the content that a real DVD player will read. The copy protection exists in the unplayable DVD content, DVDFab will not read it when copying.

Disable PathPlayer:

Since PathPlayer may need several minutes to open a DVD, if you know the disc is not copy protected, you can disable it to save time.

Enable PathPlayer when necessary:

DVDFab will not enable PathPlayer in normal cases when opening a DVD. Once DVDFab detects a reading error when copying DVD, it will ask user to restart DVDFab to reopen the DVD using PathPlayer. In this way, DVDFab has the ability of opening DVD as fast as before, and uses PathPlayer when really necessary. If the reading error is encountered more than a minute or two into the copy process it will save time to use the default ("Always Enable") option below.

Always Enable PathPlayer (Default): Improvements in PathPlayer and reductions in the scanning time have allowed this to become the default option. This option gives DVDFab the most information about your DVD and will usually result in a better, more reliable backup copy. You can still set the other two options (above) if desired. PathPlayer must be in "Full Disc" mode for the "Jump To..." navigation features to be active.

Navigation (DVD menu needs to be preserved): This feature gives user the ability to determine where to start playing DVD, whether from the first menu or the main title. And it also enables users to remove the unwanted PGC parts.

Scan BOVs (Button Over Video):

Button Over Video (BOV) is a feature seen more and more on recent DVDs. The purpose of BOV is basically to make a transition from your main movie to some extra that is in another VTS. One good example is the white rabbit feature in The Matrix. Other examples are Bambi II, Stuart Little 2, Spiderman and Men in

Black II.

Scan cells lasting less than 300 seconds:

DVDFab scans the title VOBs for BOVs. To speed things up and not waste time scanning parts of the VOB that are unlikely to contain buttons, DVDFab only scans cells that are of small to average duration. The preferences allow you to adjust the maximum duration of cells which will be scanned for BOVs. Default value is '300', which is a cell time of 5 minutes.

Scanone VOB every 30 VOBUs:

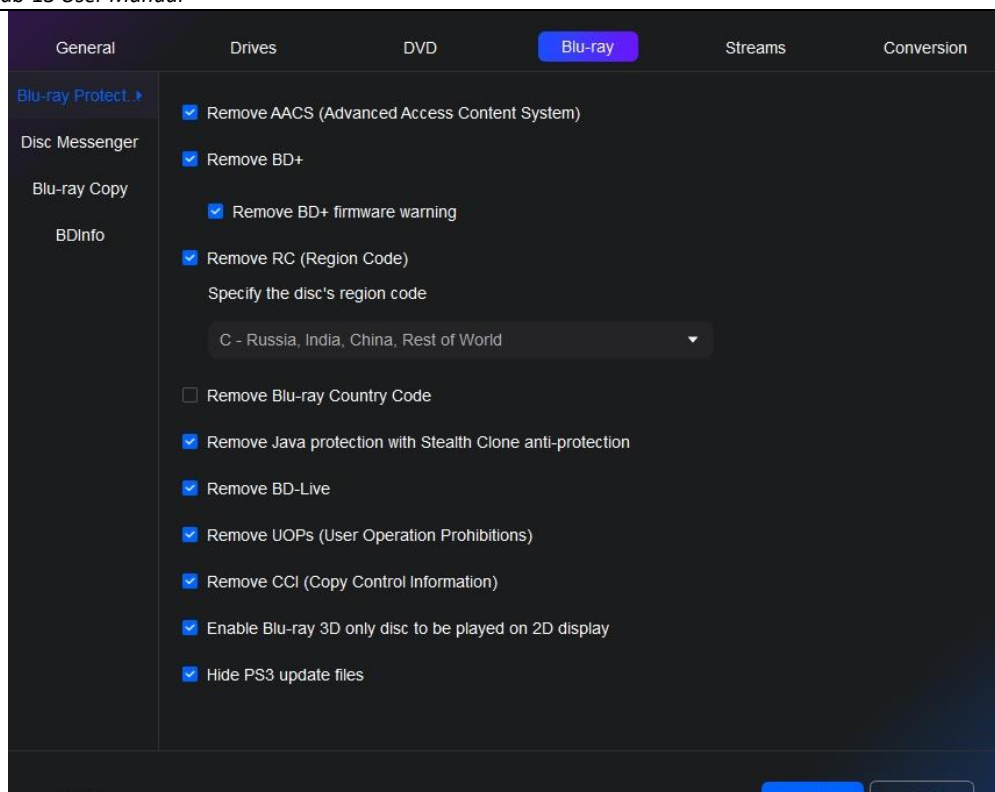

Set it to 1 to scan every VOB in the selected cells (slowest but safest). Set it to a higher number to by-pass some VOBs within a cell. In any event, for safety, the first and last VOB of every cell in the VTS is scanned. Our tests show the default setting of 30 is reasonable. At this setting, the first VOB is scanned, then 30 are missed, then another is scanned, then another 30 are by-passed, until the cell ends, at which time the last VOB is scanned. Default value is '30', which is about 15 seconds of video. Check for multiple sets of BOVs in the same cell (like Easter Eggs):

This checkbox option tells PathPlayer to check for additional BOVs when it finds one set in a cell. This is found only rarely on certain discs for unusual features (like Easter eggs). This deeper analysis takes additional time, so the default is unchecked for faster PathPlayer analysis. You can enable the feature by checking the box if you think there are features like this on your disc.

7.4 Blu-ray

7.4.1 Blu-ray Protection

Make sure that "Remove AACs, BD+, RC, BD-Live, UOPs" options are enabled, or the source will not be accessible due to these different protections.

Remove AACCS (Advanced Access Content System):

The Advanced Access Content System (AACCS) is a standard for content distribution and digital rights management, intended to restrict access to and copying of the next generation of optical discs and DVDs. The specification was publicly released in April 2005 and the standard has been adopted as the access restriction scheme for HD DVD and Blu-ray Disc (BD).

Remove BD+/Remove BD+ Firmware Warning:

BD+ is a component of the Blu-ray Disc Digital Rights Management system. It was developed by Cryptography Research Inc. and is based on their Self-Protecting Digital Content concept.

Remove RC (Region Code):

Blu-ray Discs are digitally encoded with a "region code" (A, B, or C, sometimes referred to as 1, 2, or 3), which allows the disc to play only in a Blu-ray player with the same region code.

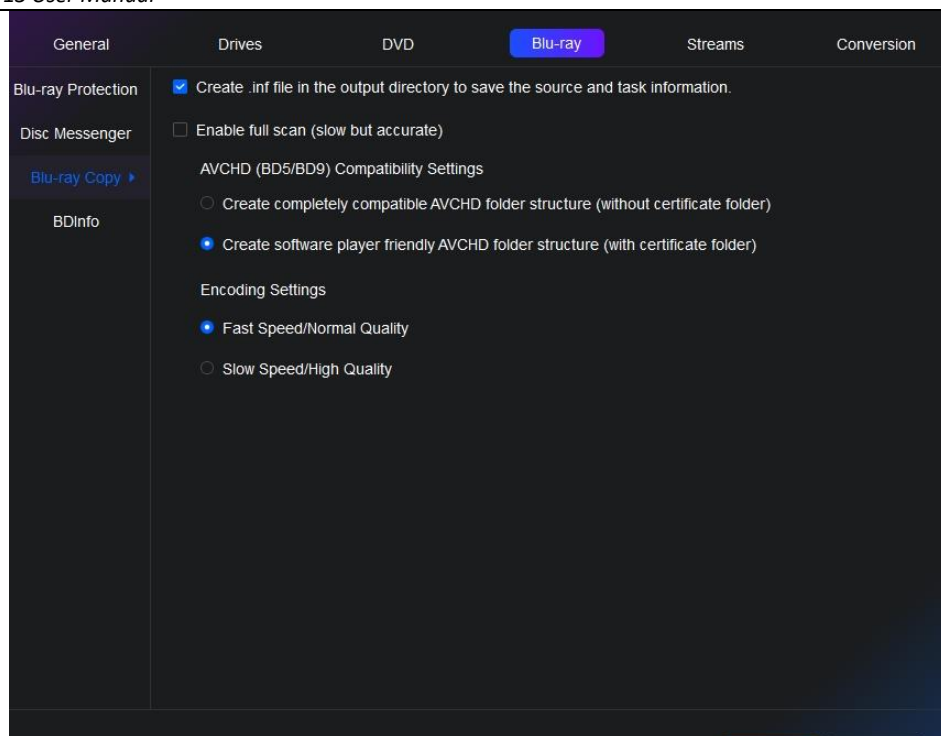

Remove BD-Live:

Some of BD-Live content are AACCS encrypted, and the backup disc you are watching it without decryption. Remove UOPs (User Operation Prohibitions): Please see above DVD part.

Remove CCI (Copy Control Information): A two-byte flag included in digital television streams that allows content owner and cable operators to specify how content can be copied. CCI is define as part of the 5C copy protection specification devised by DTCP working group back in 1998, and later defined as part of the FCCs Plug and Play agreement in 2003.

Hide PS3 update files: As the protections embedded in the source Blu-ray have been removed after the source reading, there is no need to update the firmware of your PS3 for playing the output file. So, we suggest you enable this option.

7.4.2 Blu-ray Copy

Enable full scan: Since the logic of scanning just search 10% of full disc, which is not very accurate. If you want to get the perfect and accurate result, please enable this fullscan function.

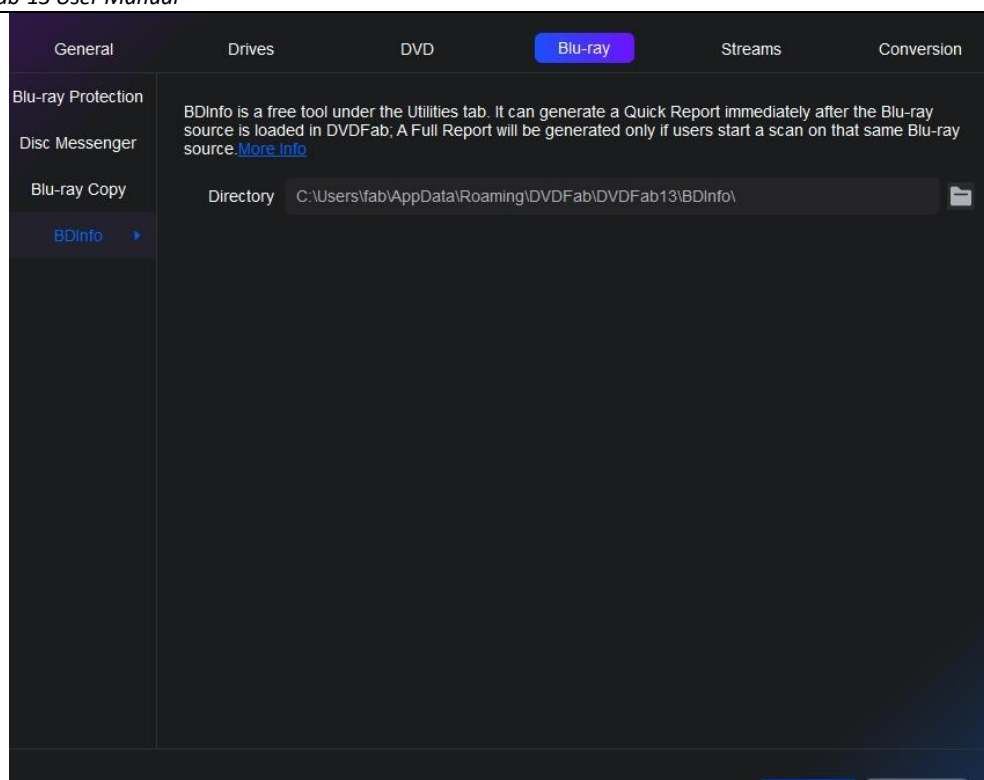

AVCHD (BD5/BD9) Compatibility Settings:

Create restrict compatible AVCHD folder structure (without certificate folder): If you play the disc that you ripped in stand-alone player, please enable this radio button.

Create software player friendly AVCHD folder structure (with certificate folder): If you play the disc that you ripped in software player, please enable this radio button.

Encoding Settings: Determine whether you want to perform the task with your computer capability is fully utilized but receive a comparatively normal video quality, or you prefer a comparatively lower speed with excellent video quality, it's all your call.

7.4.3 BDInfo

Blu-ray Information refers to the video and audio technical specification from a Blu-ray movie disc, including disc size, playlist content, as well as stream codec and bit rate details.

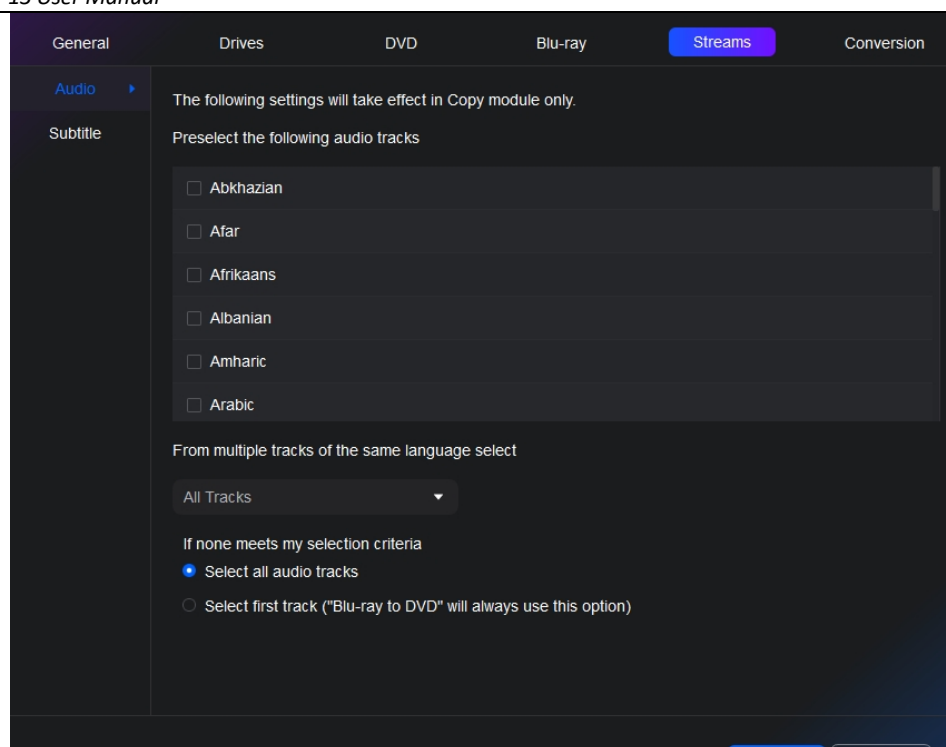

Why do we need BDInfo report?

Upon finishing a Blu-ray backup process, some users may want to know the detailed information on the Blu-ray title they have just backed up, which may include the bit rate and codec information on both audios and videos. This can be done by some third-party tools which may require an extra amount of time, long or short, to process some additional analysis, which means inconvenience to most of users. This is when and where DVD Fab BDInfo feature kicks in, to make this BD info collection process drastically short.

7.5 Streams

This part defines how DVD Fab 13 preselects Audio track(s) and Subtitle stream(s) after analyzing sources.

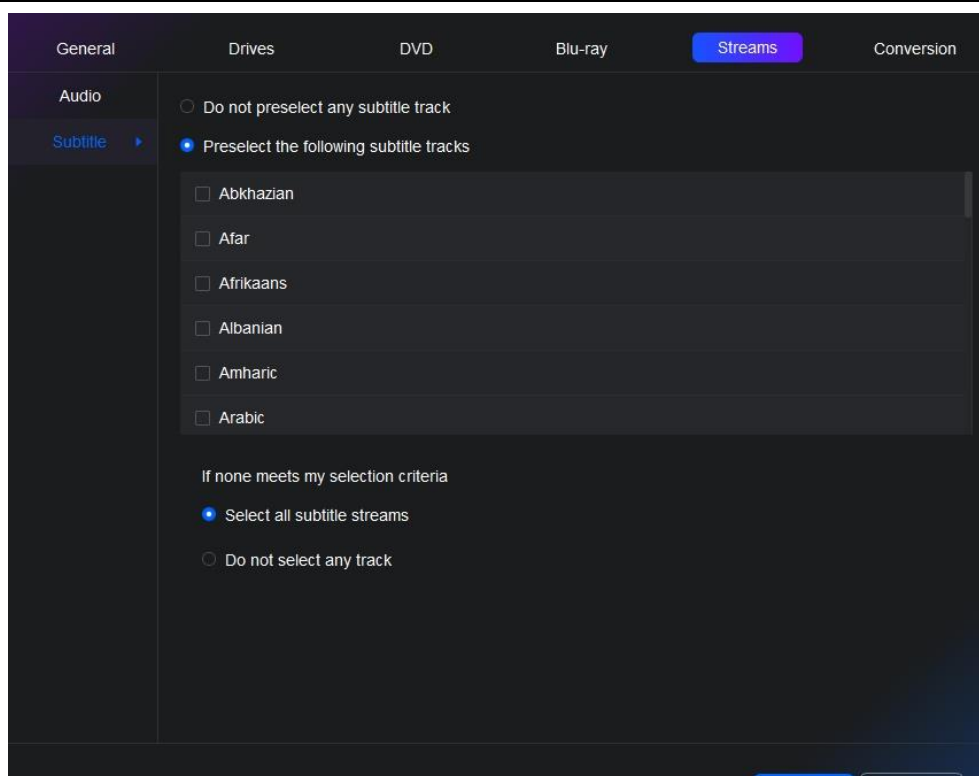

7.5.1 Audio

You can let DVD Fab preselect audio tracks based on language or audio format. Every DVD is different so verify that the pre-selected tracks contain the audio tracks you want on your backup.

7.5.2 Subtitle

You can let DVD Fab preselect subtitles based on the specific language. Make sure the subtitles selected are for the main movie and not a commentary or other bonus feature. You can override these pre-selections at the Operation Window where the subtitle selection box appears. You can also choose to not pre-select any subtitle track by ticking the top radio button.

7.6 Conversion

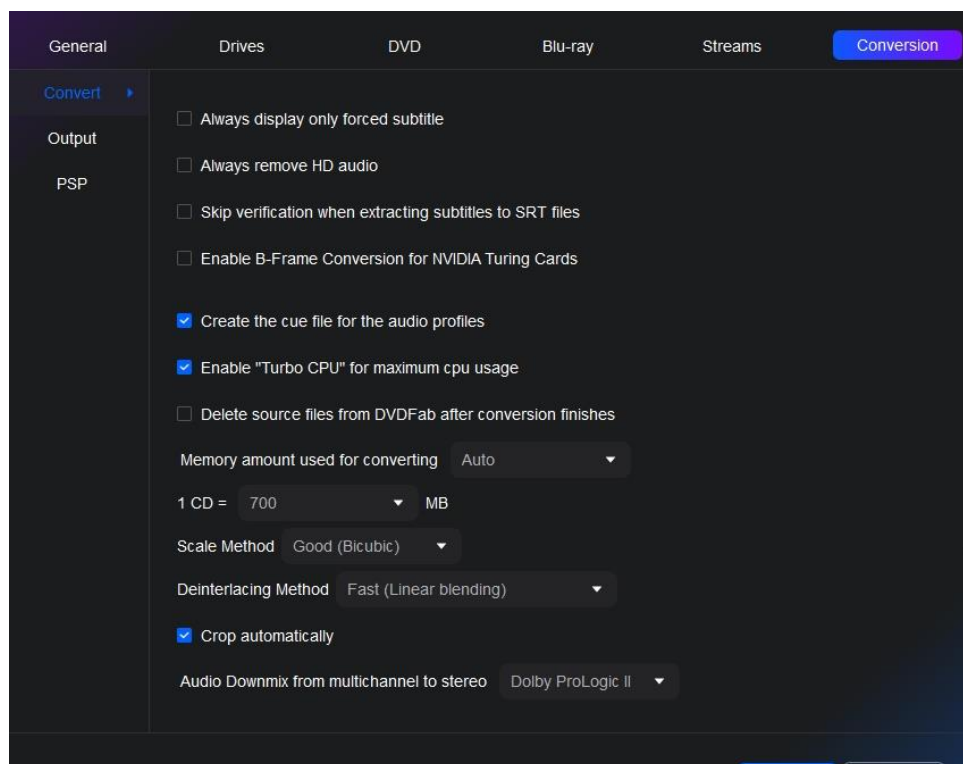

7.6.1 Convert

This page contains some settings that apply to DVD/Blu-ray Ripper.

Always display the forced subtitle: Forced subtitle usually refers to a foreign or alien language, or a sign, flag, or other text in a scene is not translated in the localization and dubbing process.

Enable “Turbo CPU” for maximum CPU usage: The “Turbo CPU” is a speedup tool which can rearrange the task priority and set the task that are more important to be proceed early.

Memory amount used for converting: There are five options for users to select the ideal way DVD Fab 13 uses your PC's memory: Auto, Fast Speed, Standard, High Quality and Max. Usually, Auto is the recommended and also the most appropriate choice, which can adjust the usage of your PC's memory according to the source and the current settings. If you choose Fast Speed, the conversion speed will be much faster than the normal speed, but you may pay for it by making a compromise at the output quality; if you choose High Quality, you can get a much better quality video, but the conversion will slow down and the output size will be bigger than the source to possess bigger memory amount; if you choose Standard, then the video conversion will be performed with the standard speed and there won't be much obvious quality degradation working with DVD Fab 13; Note that "MAX" may not produce the fastest speed; each PC system will be different so try each setting to see the result.

This page contains some settings that apply to DVD/Blu-ray Ripper.

Always display the forced subtitle: Forced subtitle usually refers to a foreign or alien language, or a sign, flag, or other text in a scene is not translated in the localization and dubbing process.

CD Size: Customize the size of a CD when converting so that the files produced will fit in the desired space.

Scale Method: Provides three choices to zoom in/out the video, namely, zoom in a low-definition video to a high-definition video or zoom out a high-definition video to a low-definition video. Choose Fast, the process will be speeded up with speed several times faster than normal, but you may get a video inferior to the source; choose Good, both the processing speed and quality are ensured; choose Best, you will get a better-quality video compared with the source, but the processing slows down.

Crop automatically: This checkbox allows you to turn the cropping function on or off by default. You can also set this manually using the buttons on the Crop Settings page as you set up a conversion.

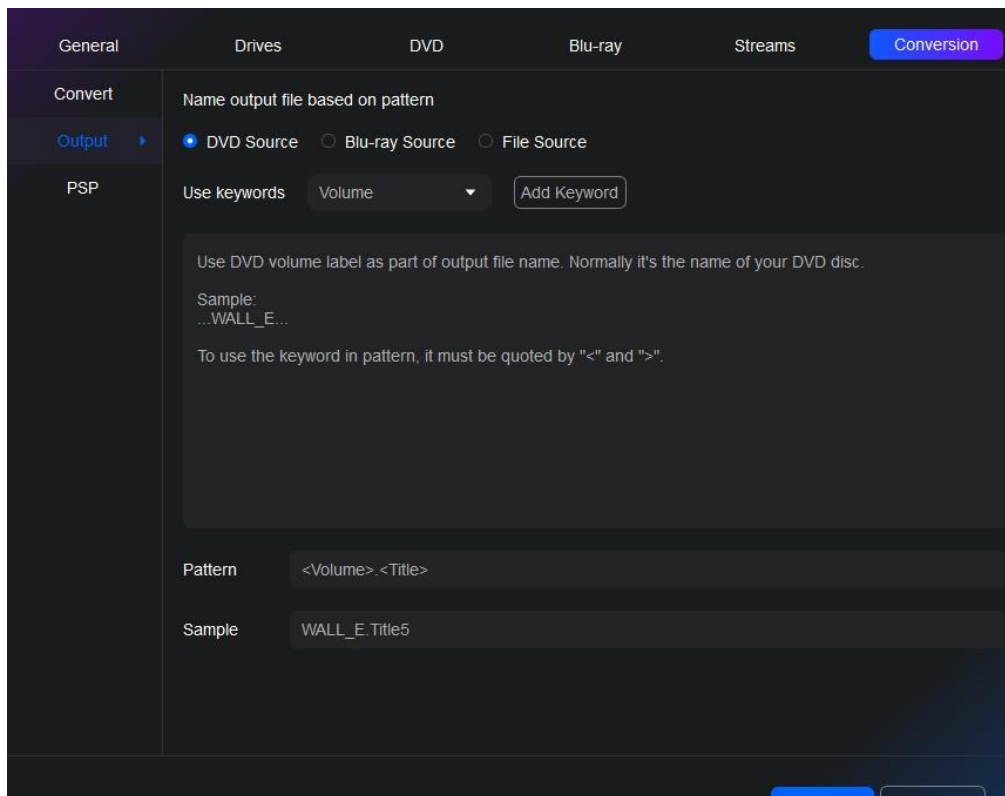

Audio Downmix from multichannel to stereo: Switch the multichannel to one stereo among Stereo, Dolby ProLogicII and Dolby ProLogic.

Default Frame rate/Audio Channel: Set the default Frame rate and Audio Channel to be the same as source

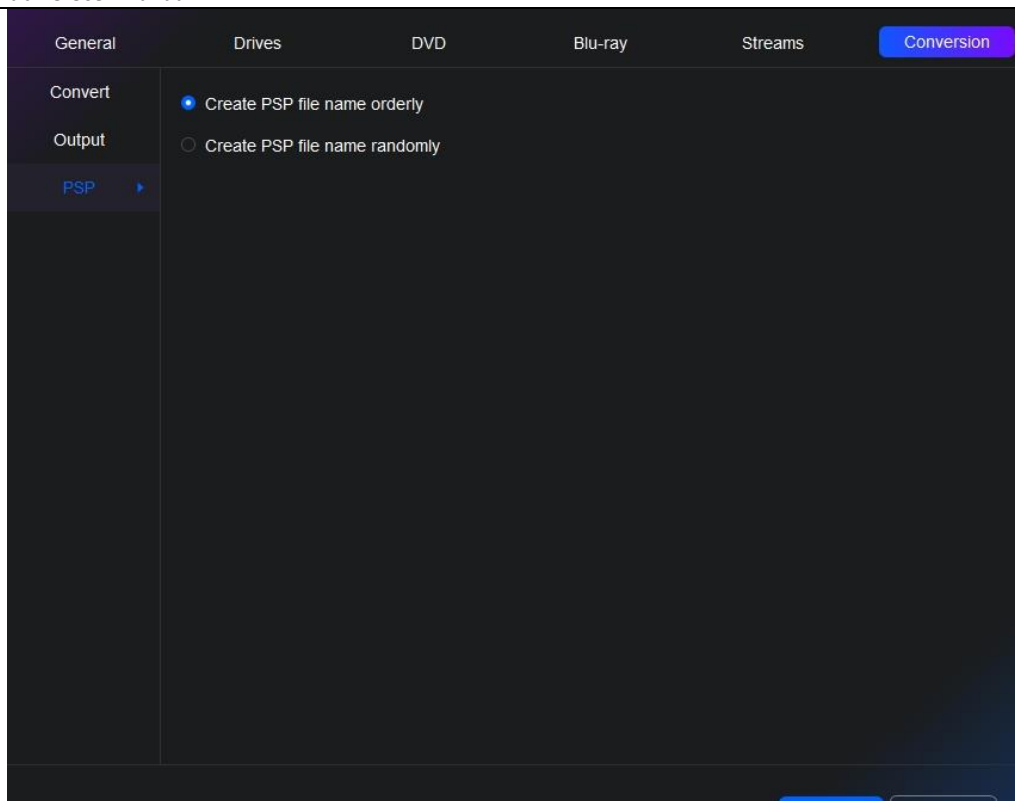

or specified in profile.

7.6.2 Output

Define how to name the output file, based on DVD Source, Blu-ray Source or File Source and how to manipulate keywords.

7.6.3 PSP

This page controls the way of creating PSP file name, orderly or randomly. If you click the “Default” button at the bottom Common Settings window, all the settings will reverse back to factory settings.

8. Update of This User Guide
